From: Robert Barker
Topic: 14 Message: 14

I believe the 409.025 is used by the Veteran's Administration or by the IRS. Both buildings are one big building at I35 and Ben White.

This and 164.175. Both are repeaters. One is one agency and the other is the other agency. Not sure which is which. And I would like to know the input frequencies if anyone has that information.

The 412.625 and 406.175 are used by transmitters in streams and rivers that transmit the water level. You will typically find this transmitter at a bridge. Usually a box with and antenna on it. Some rivers are monitored by LCRA and some are monitored by the City of Austin. I think Austin uses freqs up in the 173 Mhz band.

Currently San Marcos Police, Fire, EMS and Hays County Sheriff are using LCRA's 900 Mhz system. Search your scanner from 935-940 Mhz. The Freqs that are on the LCRA system are easily found by the little "song" at the end of very transmission.

I'm trying to get the wireless microphone frequencies that APD is using with their dash mounted cameras. Supposedly the camera is activated every time the officer activates his overheads. They only have about 30 cameras in use at the moment and they are divided throughout the city. Departmental policy is to record any enforcement actions: arrest, citation, warnings?, etc. I had one officer say he thought it was 169.445 and 170.205. I don't know if that was just his device or if they are all on that freq. I would hope they would have the same freq so that if multiple (microphone-equipped) officers come within view of the camera, that you'd be able to hear them all. Let me know what anyone finds out.

16. 183 Cameras

Topic: 16 Message: 16

Hi,

I'm new to this list. Was wondering if anyone has
brought up the subject of the tv cameras on 183.
They obviously aren't on a closed circuit (they have
antennas).

-Tony

every thing is decided by cad. if cad shows that it is an austin address, apd/afd respond. if it is an austin address or a travis county address austin ems responds. i those areas that are on the border line, you might end up with multiple agencies.someone will call it in as 183 just north of 620 (austin) and another caller may stop at a gas sta just inside cedar park and call it in as just towards 620 from here (williamson county) in this instance, you'd get apd/will coso/austin fd/jollyfire (they have contract with austin to first respond)/cedar park pd-fd/williamson county and prob dps (they handle most collisions in will county). as to who does what, fire and ems just handle it. first unit on scene usually transports and others assist unless more patients need to be transported. law enforcement usually dickers it out among themselves.

city of austin units handle city of austin calls without regard of which county it is in.

i think apd does have some of will co 800 radios. some of the adam units have vhf radios with intercity and, i guess, tcso. afd has just thier freqs. ems has vhf 9(tac1, tc ems, hospital, intercity, tcso n, tcso s) and uhf (all ems/apd/afd/airport pd channels)
hope that helps. chris

Usually the wireless microphones are in the 170-174 MHz range and they put out only about 500mW. You have to be at fairly close range to get them. You might try and Arrow brand hand held VHF direction finding antenna to pull in more signal.

Parts of Austin up Hwy 183 are in the City of Austin but actually in Williamson County. I never have figured that out. Jollyville VFD for instance, is not allowed or can't get on Austin EMS county freq because they are not part of Travis County. They have to use regular EMS radios on 462.975 to talk to Austin EMS and they talk to AFD on the 453 frequencies. Most of the other VFD's in Travis County talk to AFD on County Fire Net 153.950. EMS used to have a tac 1 on 155.325. I guess they have abandoned that frequency. They also are licensed for the Med channels from 463.000 to 463.175, but I never hear anything on them. 463.100 is a repeater but I've never heard anyone using it.

Incidently IBM security at 10500 Burnet Rd (464.825) also has radios on Austin EMS freq to talk to them. I'm surprised EMS doesn't mind private companies like this on their frequencies, but It does make sense when they need directions to a patient.

>From the other post.. it would appear that perhaps some APD cars do have 800 Mhz radios to talk to Williamson County. I cannot confirm this but it sure sounds like it.. They may just have the handhelds. That would explain why they were saying that "so and so" has the radio.. directing them to tell the officer that has the Williamson County radio so he can talk to that agency directly. But If APD does have them, then the dispatchers need one too. Starflight also has a problem that they can't get on the Williamson County system either. Williamson County EMS is still paging and simulcasting calls on their 462.975 frequency.

Still trying to find the 800 Mhz frequencies for AMERICAN MEDICAL RESPONSE, which is a private EMS here in Austin.

Someone else wrote about the cameras up and down hwy 183. The wires above the cameras are lightning rods, not antennas.. At least that is what I was told. Supposedly the cameras are wired and do not transmit a signal. I may be wrong. Incidently, I think TX Dot is now using NEXTEL radios. I saw several news bits of them on TV talking into what looked like a cellular telephone which is a nextel radio. I haven not been hearing the Courtesty Patrol lately on the 47.14 and other 47.xx frequencies.

is 463.100 still have a repeater in it?? the ems plan is to start using the med channels for north dispatch, south dispatch, scene channels and the like. buthave not yet started the plan in action. wwaiting for hardware to make it all work i think.

tac 1 is still i nthe units and used as a chit-chat channel between units on a rare basis. commun8ications has tac 1 in thier console but never monitors it due to skip traffic that comes in loud and clear up there.

chris

23. Re: Mutual Aid in Central Texas

Yahoo group: CenTexComm

From: Aemsea@xxx.xxx
Topic: 19 Message: 23

slight correction: the only outside agencies that are allowed to transmit on austin ems primary (462.975) are ibm corporate first responder group, travis county units "ems1" and "ems2" and outside helocopters inbound to austin hospitals. jollyville contacts ems on travis county ems channel (155.715) and firemed 3 (which is the same as firecom 3, now used for joint ems response between afd/aems.

the recent annexations in the nw corroider is why you now hear new units like engines 34 and 38, medics 9 and 19 and ems unit 60. medic 9 and engins 34 are on lakecreek parkway near the walmart and engine 38 and medic 19 are off spicewood parkway and anderson mill. unit 60 is the northeast commander based out of 5th and webberville (afd sta 5/eme sta 4)

austin is in other counties (hays and williamson) due to annexations. the city maintains that they will provide services to citizens within thier city limits without regard to county lines in order to provide the same level of service across the city.

Topic: 28 Message: 28

Wanted to let everyone know that the new 1999 Mapsco Streetguide Map is now out.
I picked one up today at Sam's Wholesale for $17.99 and they should be that much at Walmart too. I have seen them for as much as $27 at other places.

It' s the 4th Edition and they are blue/green. This is the map used by APD, EMS and Fire when they give out calls on the radio.

you can see it at www.mapsco.com

29. Bell County Trunked System

Yahoo group: CenTexComm
Date: 1999-04-04 17:30:53 UTC
From: The Peters Family
Topic: 29 Message: 29

I would appreciate some information about the new trunked system in Bell County. My mother lives in Temple and enjoys scanning public safety frequencies, but her scanner will not scan trunked systems. I am trying to determine what type of scanner she needs to continue scanning the Temple area public safety services.

My question is:
What type of system is being installed in Bell County (Motorola II or Ericsson, etc.)?
Will a Radio Shack PRO-90 or PRO-2050 receive the new system? Any information or suggestions would be most appreciated!

Thanks,
Rick Peters

Bell County is going to a GE trunking system some time in the near future. This is part of the consolidation of the entire county system to a single dispatch center in Belton. A majority of the county's police, fire, and EMS will be going to the GE trunking system. This will include Temple PD and Temple FD. Scott and White EMS along with King's Daughter's EMS will not be on the trunk. All of Belton's services, Harker Heights, Killeen, and Nolanville are reported to go to the new system. I am not sure about the little fire departments, but my guess is they will stay VHF for now.

The consolidation was supposed to take place in January. Unfortunately the computer for the CAD system is having lots of problems. My understanding is that they are having big problems with the MSAG along with the county's map system. Temple PD is ready to go, and so is Killeen I believe, but the county is dragging its feet.

When they go to the GE system you will need an 800 MHz capable scanner to listen to the action. GE has that annoying "anti-scanner" tone on the tail of transmissions so you might consider adding the GE tone eliminator (can't put my finger on the name of it right now).

A conventional scanner will not be capable of following or trunking along with all of the departments on the system so you will hear a mix of stuff with a conventional scanner.

Right now the only Trunk Tracking scanner that will follow a GE system is an OptoCom from OptoElectronics, or 2 C-IV scanners using the ETrunker program available from numerous sites on the Internet. Uniden will theoretically be coming out with a scanner soon that will follow GE systems, but watch for the release date to be missed a couple of times as they fight the type acceptance battle with the FCC etc.....

Good Luck!

35. ABIA - Austin Bergstrom International Airport

Yahoo group: CenTexComm
Date: 1999-04-27 04:37:36 UTC
From: Robert Barker
Topic: 35 Message: 35

Went to the Bergstrom open house on Sunday and confirmed the following:

460.200 Airport Police This is APD ch 10. It was used at Mueller before
they went to 453.2375 and 453.3375
864.5125 Parking and Airport Operations. Shuttle busses and officials.
Very Weak Repeater at the airport. Seems stronger in N. Austin
Better if you listen to the input on 819.5125

That was about it.. My frequency counter hit on: 464.525, 464.550 A
contractor using temp radios, 466.2625?, 466.3125, 466.2875, 401.925????
Unknown what these might be used for.
Also there is a security company called Emerald and they seem to do the main
operations around the airport. (just outside) not inside. There were a lot
of references to Emerald last week when an aircraft came in in trouble
showing an unsafe landing gear. All sorts of confusion about who was to be
on the runway and who wasn't. Apparently they still have lots of bugs to
work out.

I'm told that the above 800 license is supposed to be part of a Trunked
system. It wasn't trunking on Sunday and it's not trunking on Monday night.
But that freq is licensed in Travis County to Nextel, and they are also
licensed on 860-865.5125 and 860-865.9625

Bergstrom Tower 118.225 (254.25 military aircraft)
Ground 121.700 (263.00 military
aircraft) also Clearance Delivery
Austin Approach/Departure 118.800 (003-170) and IC ?
119.000 (171-002) *
what do these numbers mean? 171-002?
ATIS 124.400
WX ASOS ? 127.875

37. Highland Mall new Frequency 452.300

Yahoo group: CenTexComm
Date: 1999-05-02 23:35:52 UTC
From: Robert Barker
Topic: 37 Message: 37

Highland mall (in Austin) is now on 452.300 They used to be on 855.0375
Don't know why they switched and how long they have been on the new freq but
I found them by accident.

38. Austin Police Open House This Saturday

Yahoo group: CenTexComm
Date: 1999-05-05 02:06:01 UTC
From: Robert Barker
Topic: 38 Message: 38

Austin Police will have an open houst this Saturday May 8th

http://www.ci.austin.tx.us/news/police_openhouse.htm

For immediate release:
May 4, 1999
Contact: Austin Police Department Public Information Office, 480-5017

Following the success of last year's Open House, the Austin Police Department will host the second annual Open House for the public on May 8 at Police Headquarters, 715 E. Eighth St.

The event will be from 10:00 a.m. to noon as part of Police Memorial Month. Beginning at 9:30 a.m., East Eighth Street will be barricaded from the frontage of IH 35 to Red River Street to allow for displays in the roadway on Eighth.

Displays will include Fingerprinting, H.E.A.T. (Help End Auto Theft), Citizens Police Academy, Crime Analysis, Forensics, Recruiting, a Bomb Unit demonstration starring the Bomb Robot, SWAT Technical Rescue Unit, Recruiting , as well as a number of police vehicles and information on all Area Commands.

Tours of Police Headquarters will again be conducted. McGruff the Crime Dog will make an appearance and a police photographer will be on hand to take pictures of children with police officers. Special Operations Units, including motorcycles, mounted patrol, bicycle patrol, narcotics, the Mobile Neighborhood Center and the canine unit will have demonstrations. SWAT officers will rappel down the front of the headquarters building.

A special program will include the Reagan High School Gospel Choir, and Austin Mayor Kirk Watson will announce the top three finalists in the competition for an art project to be housed in the new South substation.

Parking will be available under the IH 35 overpass between East Seventh and East Eight streets and at the Waller Creek Plaza Parking Garage at the corner of East Ninth Street and the IH 35 frontage road.

Last year's Open House brought out more than 1,000 guests. This is a wonderful way to let the community know how APD does its job and how everyone in the community can work together. This year's theme is "APD and You: Working Together - Building Community."

For more information, contact Lolita Slagle at 480-2110.

39. FBI on Low Band?

Yahoo group: CenTexComm
Date: 1999-05-07 21:27:40 UTC
From: Robert Barker
Topic: 39 Message: 39

A few days ago they did a new story talking about finding the body of famed
Athiest Madely Murray Ohare near San Antonio TX.
They are still looking for her body (if she is dead -they still do not know)
But they showed FBI agents talking on handheld radios.

The radios they were using had distinctive very long rubber floppy antennas
on them. It looked most definetely to be low band.
Or something lower than 150 Mhz. Does anyone have any info on what
frequencies they might be using and it if is analog or digital.

APD is working the motorcade route on Ch 7 460.025
I'm also hearing traffic on the airport administration/bus channel 864.5125

Secret Service Ch Baker 165.7875 Usually announces all departures and arrivals of motorcade
Oscar is also active 164.8875 but it's all DVP scrambling so far

Other freqs to watch are: Tango 164.650
Papa 164.400
Sierra 166.5125

415.700 is commun downlink
phone patch for Airforce One

He will have dinner at a Fundraiser in West Austin on Lake Cliff in Baker 7 District.
He will stay the night at the Driskoll Hotel at 6th and Congress. He may be out on a balcony looking at 6th street tonight.

And will depart early in the morning tomorrow.

43. 460.225 APD Texas State of?

Yahoo group: CenTexComm
Date: 1999-05-15 04:21:13 UTC
From: Robert Barker
Topic: 43 Message: 43

Well, you can take 460.225 off your APD lists. It seems they lost this frequency. Actually I think they just forgot to renew it with the FCC for several years(which is why it has not shown up in Police Call the last several years) and now the State of Texas must be complaining about APD because they have been told that if they come back up on APD Ch 9 460.225 They will be fined.

The frequency 460.225 is now licensed to Texas State of... and the transmitter is atop the Regan Building.

Along with that note 460.050 has been used at Brackenridge by the maintenance men. but that frequency is also getting a license at the new Bergstrom Airport ... possibly for maintenance crew.

I'm listening to APD Ch 7 460.025, Friday Night.. and they are working APD undercover prostitutes.

44. Williamson County Talk Groups changing id's

Yahoo group: CenTexComm

From: Aemsea@xxx.xxx
Topic: 44 Message: 44

is it just me or has anyone else noticed that round rock has changed some fd ids? i had rrfd tac 1 as 2128 and now it seems to be 2131. tac 2 was 2160 and is now 2163. both 3 numbers apart.

also, i thought that a type ii system would have only odd or even numbers, but this one seems to have both.

46. Re: Williamson County Talk Groups changing id's

Yahoo group: CenTexComm
Date: 1999-07-02 11:37:31 UTC
From: Robert Barker
Topic: 44 Message: 46

Hey Chris and the group:

Regarding ABIA - Austin Bergstrom International Airport,
The police are using both 460.05 and 460.200. I think the 460.05 is the primary Channel 1. and the 460.200 is secondary ch 2
I do not know what happened to their old freqs 453.2375 and 453.3375.. possibly left at the old Mueller Airport for whatever salvage operations they have.

Regarding the Trunktracker Talk groups:

I remember reading somewhere that if a talk group is "patched" to another talk group or if it is set to some type of priority mode..then it will show up as being 3 numbers higher than the actual talk group. hence the reason to keep the scanner in the "search" mode and not to program the memories.

Also the much anticipated BC245XLT which will track GE systems (hopefully the LCRA system) is finally being shipped to dealers. Check www.strongsignals.net for more info. The cheapest price on this scanner is $218 which includes shipping.

As soon as someone gets one, please let me know. I know they have been taking orders and I'm sure they are all backordered for awhile.

I spoke to an APD officer friend and an APD dispatcher friend this week about The city of Austin switching to some other type of radio system. The whole deal is a big joke.. they are still trying to dream about getting a super fancy system that they can afford. The committe has a "wish list" and the vendors come back with bids that are 10 times what they want to spend. So it appears that nothing will happen within a year from now and may not happen for several years. I have checked the FCC website and there are no new 800 frequencies that I can find licensed to the city. Or 900 freqs for that matter. If anyone has any more info on this, please post it..

If anyone wants to try trunking right now.. or try to sell anyone on trunking right now.. there is a 10 channel system used only by water/wastewater. 856-860.2625 and 856-860.4375 They could let EMS or one of the APD sectors "Try" it right now just to see how comfortable the officers are with the radios and the sounds of how the system works. EMS could have seperate talk groups for each hospital.. so they wouldn't have to DIAL up a hospital every time they want to call them (which is what they have to do on 155.340). APD has been doing Prostitute Decoy stuff this week and they could have borrowed some of the radios for that instead of broadcasting it all over APD Ch 8 - over the repeater no less for everyone to hear. And this weekend they will most likely engage teams of fireworks units to strictly answer fireworks calls which is another good task force to borrow some trunked radios so as not to tie up one of the only

2 citywide channels that APD has left (460.025 and 460.500). The 460.475 is still not installed in many of the vehicles or handhelds.

Does anyone know where the Flood Control people went?. they used to be on 151.115 but they put the recycling guys on that one.

ACC college is doing a log of license plate checks, etc on 453.225.

Don't forget to monitor the traffic helicopters on 461.750 and 450.9625 very interesting during rush hour.

and on the weekend nights.. monitor the horse carriages downtown on 464.025 - repeaters are wonderful because even though they are all within blocks of each other.. they are broadcasting through the repeater all over the city.

I have identified the following talk groups using my new Trunktracker II scanner.

935.2125 LCRA Repeater at 4 Points next to Tinseltown Theatre
935.675 Pflugerville Tx (Austin, TX). GE Edacs System
7/24/99
936.200
937.200
938.225
935.175
936.725
LCRA Talk Groups:
02-050 Lockhart
02-051
02-052 Bastrop
02-054 Giddings
02-062 TC24
02-073 Central Rangers
02-074 Rangers
02-075 Bike Rodeo
02-086
02-103
02-113
02-122 Marble Falls Bike Rodeo call center
02-132 Possible 969 fire.. we will be at parade
02-133

04-051 San Marcos
04-054

Texas Dept of Transportation (Courtesty Patrol)
10-026 Parade
10-035 3485-2 to 3485-7 pickup dead animal on Loop 1
10-073 on Guadalupe, 651 to 657 smoke test
10-079 Light bulbs

58. Manhunt

Yahoo group: CenTexComm
Date: 1999-07-26 16:05:22 UTC
From: Robert Barker
Topic: 58 Message: 58

I don't know if everyone has been monitoring the current manhunt going on at the Hay's/Caldwell County Line..

A constable (not sure if it was Hays Co or Travis Co) attempted to stop a suburban. The occupants refused to stop and a chase insued. DPS got the car stopped using Spikes and they think they are still in a field at that location. This has been going on since about 2pm yesterday. The suspects exchanged gunfire with officers yesterday right after they bailed and then supposedly again this morning as I heard DPS helicopter pilots on the way to ABIA (Bergstrom) to get the aircraft.
They have already spent too many hours in the air so they are calling for another helicopter from Waco. The DPS guys are on 155.505.. But I also heard them talking to the dispatcher on the normal 154.68 mobile to 155.46 base channel. Hays County is on 155.865 but also on the LCRA 900 Mhz radio system. I am occasionally getting the Hay's county talkgroups in North Austin, depending on who is monitoring the system with their smartzone radio. I'd imagine they are also using car to car 154.950. I'd be curious to know how the LCRA radios are holding up that far out into the county. That would be a true test of how the radios actually work. I'm not sure what they are actually using in the cars: 900 or the old VHF, since they are simulcasting on both.

Oh and last night they were using BOTH Starflight helicopters. They were talking to each other on 123.025. One being used for medical and the other being used for the manhunt.
Starflight is now equipped with the FLIR camera (infrared) but I have never heard that they got it working correctly.

DPS also has a New Braunfels repeater on 159.210 so that may be active too.

66. Updates

Yahoo group: CenTexComm
Date: 1999-08-11 05:32:23 UTC
From: Robert Barker
Topic: 66 Message: 66

For Austin, TX
Yesterday during the Lance Armstrong Parade, I heard the Downtown Rangers on a new frequency:
453.2375 Downtown Rangers. (this was the old Airport police repeater so I suspect they may also have 453.3375 available as a channel 2.

Airport police is on 460.050 (The real cops) and the Security guys (not real cops) are on 460.200

I have also found a new frequency for Horse Carriages downtown 853.4875
This is not the same company as the ones on 464.025, which is a repeater that can be heard all over the city.. Interesting listening.

Anyone have frequenices for the new TV Station in town: NEWS 8 Austin.
They were out at the Lance Armstrong parade and concert shooting videos, etc yet they are not even on the air. VERY impressive station at 17th one block east of Lavaca.

All TxDOT operations appear to have completely moved over to the LCRA's 900 Mhz Radio System. I originally thought the tower was near Pflugerville but I have now been told that it's in Williamson County, possibly near Westinghouse Rd and I35.
Depending one who is tuned to their channels, I can also hear San Marcos Police, Boerne Police, CARTS (Capitol Area Rapid Transit System?), 969 Fire Department, All the LCRA traffic including the Rangers, TxDOT transportation includes sweepers, and Courtesy Patrol Trunks.
There is at least one more tower.. and I'm guessing it's south.. Possibly Westlake Hills or Oak Hill or off Brodie Lane. Any info would be appreciated.

Channel 36 new helicopter is on their same freq 450.1125

453.225 is now Austin Community College police. Don't know where the radio Techs went.

71. LCRA radio system

Yahoo group: CenTexComm
Date: 1999-08-14 01:32:59 UTC
From: Robert Barker
Topic: 71 Message: 71

The way that I came up with the North LCRA transmitter is that I put my radio on SEARCH and captured the frequencies from 935-940 that I was hearing WITHOUT an antenna. I identified the frequencies.. then I stayed up late to determine the ORDER that the frequencies were trunking in.
(I was actually using a Pro-43 scanner without an antenna since that radio is much more sensitive)

Once I got the order, I was able to NAIL that site. Again, I am not sure where it is but I live in a house off Mopac and Parmer and I'm hearing the system without an antenna so it must be close. And I know I have the correct order because I never miss a conversation.

My friend owns a paging/cellular business in Marble Falls. He has the LCRA Radio Techs coming in there periodically. He asked them what transmitters were from his range to my range.. They told him that there is a Blanco North site and a site in North Williamson County. He did NOT mention a site at Seward Junction and I'm sure he would have since I should be able to hear it from my location.

I assumed, since I had seen that LCRA had frequencies listed at the tower in Pflugerville next to Tinseltown that the signals I was hearing were from a tower there, but the Tech told my friend that there is NO LCRA tower in Pflugerville, so going on what the Tech said, it must be the Williamson County tower. This kinda confirms because the signal gets weaker as I go toward downtown Austin. In fact, the signal pretty much drops off around MLK Blvd.

I know there has to be a transmitter south. I know this because my Pro-43 is picking up signals on 900 freqs that the trunktracker is not getting at that site. I know it is a different site because the signal is weaker.

What I need to do it put the Pro-43 in the car and drive south; and keep driving until I am able to get the LCRA traffic on freqs between 935-940 without an antenna, and try and get as close to the site as I can. I suspect this site can be found by driving out south along 360 past Westlake and if it is not there then it's probably off Brodie or perhaps even out East toward Bastrop. Once I am close enough to that site, I will again have to first identify the frequencies used at the site and then to identify the order the frequencies are used in.

I wish I could just get the info direct from LCRA. It's just hard to get anyone to help you with these things.. and My friend hasn't been able to ask the Tech about other transmitter sites in Austin.
(anyone know anyone at LCRA that would know anything about this?)

Incidently there are some boat races going on in Marble Falls this weekend and the system is very busy with that traffic. The radio techs are loaning

radios to all the agencies trying to get them "hooked" so they will buy them and get on the LCRA system. Rual-Metro EMS is the ambulance service that is on the system along with all the volunteer fire depts, etc.

I have also heard a lot of traffic here in Austin from the TxDOT people. They are doing a lot of sweeping of Mopac and I-35 and painting stripes, etc. They do a lot of talking all through the day and well into the night.

The site in North Blanco County uses the following frequencies (according to the LCRA radio tech)
936.750 937.175 937.675 937.1375 938.750
I do not know if this is the correct order but that is the order they were given to me in.

73. LCRA radio system

Yahoo group: CenTexComm

From: Robert Barker
Topic: 71 Message: 73

I went to Marble Falls today for the speed boat races. I listened to LCRA on the Blanco North System. Same talkgroups exist no matter what tower you are listening to. (Someone in the area must have been Scanning Boerne PD as I was getting their talk group also)

I did hear LCRA mention this morning about a CREEDMOR site, so I guess that may be where the 2nd LCRA tower is located.

I still have no info on a Seward Junction site. Of the freqs you gave me John, I was unable to get the scanner to find the control channel.

Just to update everyone, this is what I have so far:

_____
LCRA Repeater for N Austin/Williamson County(TX). Ericsson EDACS System 8/5/99

935.2125(1), 935.675(2), 936.200(3), 937.200(4), 938.225(5), 935.175(6), 936.725(7)

You would need a Uniden 245XLT Trunktracker II to property monitor the LCRA system since it is a GE Ericcson EDACS system. The older 235XLT's cannot trunktrack anything on 900 Mhz.

You would also need it to follow Dell's Motorola 900 Mhz system.

Of course you can punch in frequencies to any scanner and hear the annoying tones. Or if it's that bad. you can also monitor the INPUTS to the frequencies and hear units that are close to you. Inputs on 900 Mhz are 39 Mhz below the repeater output frequencies.

Would the person in Bell County that was corresponding with me on the Bell County's Trunk System please Email me again as I lost your Email address.

78. Re: Map of LCRA repeater sites

Yahoo group: CenTexComm
Date: 1999-08-18 21:13:00 UTC
From: Robert Barker
Topic: 78 Message: 78

The LCRA "map" doesn't fully show up on the web site that I click on.. the map shows up but there are no dots showing the tower locations.. Where are you showing the towers for LCRA in Travis or Williamson counties?

I know of possible sites in Westlake Hills, At Brodie near Slaughter, Near Oak Hill, then out towards Bastrop.

You really cannot go by frequencies on a list becasue LCRA licensed a bunch of freq for each tower and then only ended up using from 5-7 of them .. and then they have towers licensed everywhere and only ended up using a few towers. It's really just gonna be a hunt. I get a good signal off the Georgetown site until I get to about MLK.. then I loose it. So I will have to identify a tower that is south and I'll bet it's the Creedmoor site that I heard the girl talking about the other day.

Someone was tuned to Hays County this morning since I was hearing that talk group.

A tech told my radio friend that if a talk group becomes activated due to smartnet.. then that talk group will continue to tranmit the rest of the day until Midnight. I don't know if that is true..

81. city of austin trunk system

Yahoo group: CenTexComm
Date: 1999-08-20 04:20:12 UTC
From: Chris Howell
Topic: 81 Message: 81

i spoke with one of the project managers for the cad/trunk radio system teams. told me that the city of austin got 2 bids from motorola and ericcson. he said each proposal was very thick (2 feet) and had not yet been fully reviewed. so they do not know whether it is 800, 900 or what. but what he did say is that the specs call for a fully digital system. so much for monitoring. the media will probably have some sort of access to purchase handhelds with no tx ability and only those talk groups that the city deems public. if those are avail to the media, then they should be avail to any citizen. but the media (and citizen therein) would have to pay for the radio, i'm sure. chris

Yes.. 04-011 is CARTS.. what exactly is CARTS?. I know they transport elderly people around.. is it like a cab service? Do they have regular customers.. It sounds like they do..

159.330 Tx Forest Service (La Grange repeater) I have been hearing traffic on this one.. suspect it will get busier with more fires

469.1125 Dave and Busters (bar that just opened at 183 and Mopac in Northwest Austin)

I have found Texas Utilities in Round Rock on 938.8875 and 938.900 seems to "trunk" between the two frequencies.

Signed on to this list earlier today, but just now found time to browse the archives, etc. Recognized a few names from another list, TexasScan. (Hi again, Robert)

I live in Bell County (Harker Heights) and, like everyone else, I'm trying to adapt to their new system. I'm also still using my old scanner for the moment, so that makes it even more frustrating. At this point, I've located many of the frequencies needed, but I keep running into a strange thing... one minute I'm hearing part of a "police-type" transmission, and the next, I'm picking up telephone conversations on that same frequency. Anyone else?

I've also found that, so far, there's no kind of "pattern" as to what department and/or city is using which frequency. Is this something that's normal for trunked systems, or will it be corrected with one of the "new" scanners? Speaking of that, would appreciate any advice on the best place to purchase one of these new toys.

Thanks!
Cheryl Anderson

Hello Cheryl,

The system you are listening to in Bell County is a trunked system. This means that all the frequencies are supposed to be used equally. When a transmission is made, it will come out on a particular frequency. If the next person to talk is able to reply back quickly, before the repeater times out, then it will be on the same frequency, otherwise, it will trunk to the next frequency in the system. Of all the frequencies in the system, you will find one that is buzzing all the time. This is called the control channel and it changes. When you find a new control channel, lock it out but be sure and go back and unlock the previous control channel that you locked out before. The control channels are supposed to change at midnight but that sometimes is more or less often. The control channel is the frequency that the actual radios monitor to get their direction on what frequencies to trunk to and what towers to work off of.

There is a single control channel for each tower. So if you are hearing more than one control channel, then there are more than one tower. I believe the officer that I had spoken to in Bell County (who I'm unable to locate now) told me there were 3 tower sites, so you should be able to pick out 3 control channels from the previous list of frequencies I gave you. But these towers are probably on opposite ends of the county so you may not be able to hear them all. The towers may operate independently meaning that you will hear the same conversations on different frequencies at the same time: one off one tower and one off the other tower. That is why you'll need to put in all the frequencies and identify the ones that seem stronger to you and that's probably going to be your closer (louder, stronger) tower. One way to do this (that I did) is to try removing the antenna.. and see if you can still pick up the signal. That is a quick and easy way to locate the stronger signals in your area. Not all frequencies may be used. Only certain ones per tower.

The trunking system is designed to change frequencies with every transmission. This allows agencies to have many talk groups on just a few frequencies. Trying to monitor a trunked system with a regular conventional type scanner will drive you nuts. Especially when it is a GE system and they have the anti-scanner trunking tones at the end of the transmissions.

The ONLY was to really monitor a trunking system is with the new Trunktracking type scanner. The newest model, The BC245XLT will decode Motorola and GE systems and will do it in all the bands: 800, 900, 400 and VHF. The radio currently retails for about $230 and but I recommend getting a decent antenna as the one that it comes with is an "all band" antenna and just does not work for the 800 and 900 Mhz band.

And yes, since you are listening to frequencies in the 800 Mhz range.. you might also pick up cellular telephone signals. Cellular phones are in the 868.940 to 894.00 range.. and that range has been deleted by most all newer scanners since it illegal to monitor cellular phones. Some of the other scanners are still out there such as the Pro-43 (which is sold all the time on www.ebay.com that still receives cellular. It is funny to note that you are not allowed to listen to cellular, yet it sometimes comes in accidently..so just don't listen to it. Some scannners are better than others at rejecting stray signals like that.

Topic: 91 Message: 91

Just wondering if anyone has confirmed the system type for the Bell County system? Lindsay's page seemed to imply it's an EDACS system. Has anyone made it up there with a 245 or an Optocom to check things out? And, I seem to remember a post somewhere stating that Ft. Hood was going to have their MP units on the system.

Speaking of agencies on systems, I'm wondering if a lot of these county-wide systems stop to consider allowing access to the state agencies. I know Williamson County based DPS and TABC units have access to the Motorola system. Here in Lubbock, DPS has no access to the city EDACS system or the Texas Tech Motorola Type II system. However, TABC has both handheld and mobile EDACS radios. And of course, the Motorola and EDACS systems have no common talkgroups. So I guess, basically, the question is what are all of these statewide agencies (eg DPS, TABC, Parks and Wildlife) going to do for communications when there's a mishmash of 800 systems out there? Look at the D/FW area. How do troopers communicate with all of the different PDs and sheriff's departments?

Maybe what we need to do is mandate that everybody still carry intercity VHF radios? Or has any system ever cross-patched intercity (155.37/154.95) onto a trunked system? Because, at least up here, nobody is using NSPAC "intercity" public safety 800 frequencies.

Sorry for the rambling!

From: cheryl@xxxxxx.xxx
Topic: 96 Message: 96

Okay, this is really starting to bug me. And I apologize upfront for being "off-topic."

Why is it (and how does it happen) that when you send a message to "The List" via your own email program (and it doesn't matter if it's a new message or a reply)that it gets sent twice? Or does it only show up twice in your email if you're the sender? Are we supposed to post messages only from the OneList Web site? Just so you don't think I'm a real idiot, I do realize that some of the duplicates result from being a subscriber to similar lists with the same members (i.e. TexasScan & CenTexComm). But this is not always the case. And I can't possibly be the only one who's noticed this and is annoyed by it.

Anyway, thanks for letting me vent. Looking forward to any answers/suggestions.

NOTE: I'll be posting this to the lists I'm a member of, so if you get another copy, it's okay!

102. Big Starflight Shakeup

Yahoo group: CenTexComm
Date: 1999-09-14 22:39:47 UTC
From: Robert Barker
Topic: 102 Message: 102

I don't know if anyone has heard about Starflight but on Saturday afternoon about 4pm.. they took off from Brackenridge and someone??? apparently forgot to unplug the battery charger cable(connected to a cart). The helicopter left off the pad apparently dragging this contraption behind them. They took out at least one street light at the ER service drive at Red River.

I don't know if it's related, but they just reported on KEYE that the EMS staff (I think it was the SETON nurses) are now refusing to fly on Starflight sighting safety concerns.

I think there is a long running feud between Austin EMS and SETON regarding the use of starflight. Everyone wants to use the helicoper for other uses.. such as Seton wants to use it for transporting non-emergency patients from their hospital Stay tuned cuz I think this is gonna get more interesting.. Seton was about to just get their own helicopter and EMS is trying to "work with them" so they can get Seton to continue to help them support the Starflight program. I am still confused about the 2 helicopters that EMS is supposed to own because when one goes out of service.. there is not another one available and Labor day weekend there was only one Starflight helicopter available. They may have two but It's not like they can just go and get the other helicopter.

Maybe Chris or anyone else on the list could help to clarify the issues.

Also I think Seton is not getting along with APD either. They apparently were at one point going to jerk all the APD officers out of their security force. I don't know what the issue is with that, but I think Seton is back to using their own security teams. I am not sure if they have APD officers anymore.

Seton may just be fighting with the city overall and may have ordered those nurses to walk off the job.. who knows.. EMS will not comment.

latest on startflight is that the seton rn's are out (looks like permently). sf available and responding with 2 austin ems paramedics (austin ems has always supplied the paramedics and dispatch) travis county is still providing thier end of the agreement (helicopter, support and pilots). they are looking into hiring (travis county) some flight nurses or maybe keeping with the 2 paramedic model, but from what i hear they would like to have emtp/rn combo on the aircraft.

for those that monitor ems, a new unit is scheduled for november (medic 21) and will be placed in lago vista.

Hi Wes (and the list):

I discovered the new information today, also. However, that's only because I've checked for it every day! Since I live in Bell County, I've been trying to get all the frequency & ID info for a while. I just sent an email to Terry that listed even more talk groups. So, it might be worth checking out the web site again in a few days, once he's verified the information.

Oh yeah, maybe you remember that I was in the market for a new scanner when I joined these lists back in August. Well, I finally got one - of course, it's the 245. I love it. And with Robert Barker's help, programming it has been relatively painless. So painless, in fact, that I might buy the Pro-92 as well! :)

Bye for now!
Cheryl

Central Texas Communications List <CenTexComm@onelist.com>

108. Intorducing HoustonScan.net Incident Notification Network

Yahoo group: CenTexComm
Date: 1999-10-25 02:55:23 UTC
From: Rick White
Topic: 108 Message: 108

To the best of my knowledge the City of Houston has not had a Incident Notification Network, until now. DFWscan.net is proud to announce that we are adding the Houston Fire Department to our family.

The Houston Fire Department has a web page (http://www.ci.houston.tx.us/~hfd_ai/) that is updated every 5 minutes from their CAD system. What I have done is written a bot that goes out and scans this web page every 5 minutes looking for new incidents. When a new incident is identified, it is dispatched thru the http://www.HoustonScan.net/ web site. This is a completely automated process and is not dependent on dispatchers.

Right Now the system is identifying fires of 1 alarm or more, HazMat and Major Accidents (MVA's that have 4 or more units responding). I am considering adding other incidents (Non-Medical) as I identify them on their CAD.

Unfortunately there is not a lot of detail from their web site. Hopefully over time I will be able to build a network of dispatchers in Houston that will be able to verify the Incident before Dispatching it. As well as expand the system to the Houston suburbs and include Police and weather incidents. If you live in the Houston area and would like to consider becoming a Dispatcher for HoustonScan.net please contact me and I will provide you with more information.

In order to register for HoustonScan.net you must have a DFWscan.net account. There is a $5.00 a month subscription fee for DFWscan but it includes incidents from both DFWscan.net and HoustonScan.net. To register go to the DFWscan.net web site (http://www.DFWscan.net) and click on the subscribe button. Make sure that you click the check box for HoustonScan as well.

If you already have a DFWscan.net account just contact me and I will get your HoustonScan.net account set up so that you can start receiving incidents out of Houston as well as DFW.

Also I have some people interested in starting an Incident Notifictaion Network for the Austin area but I need more dispatchers. If you would be interested please let me know and I will fill you in on the Details.

Thank You,
Rick

NOAA does use VHF and UHF channels for links to the transmitters. In the Houston area it's on UHF but I have heard on VHF also.

112. Austin going to 800?

Yahoo group: CenTexComm
Date: 1999-10-28 05:49:17 UTC
From: Robert Barker
Topic: 112 Message: 112

I was flipping TV channels today looking for coverage of the big accident on 183/Cameron and lo and behold on TV's Ch 6 Access: It was a city of Austin council meeting : special interest group
Assistant Austin Police Chief Ken Williams was presenting to Councilman Gus Garcia about a needed upgrade for the CAD (Computer Aided Dispatch) which is the first part of the city's wanting to switch to a new communications system.

Basically this was not being received well at all by the City Council members. They were shown a list of users of the system which included agencies such as AISD Police who would also use the system (and should help to share the costs). Gus asked what about Travis County on the list and Ken responded saying that Travis County Sheriff only accounts for about 8% of the police activity in Travis County..

Gus was not amused.. saying that on every Annexiation hearing they have, Travis County said they handle over 80% of the police matters in Travis County. Big difference.

He said that obviously the city and the county are NOT together on these matters.

What this boils down to is that I don't see Austin/Travis County as making any change to a new radio system any time soon. OH sure, they may have asked APCO for some frequencies but the paperwork has never made it to the FCC (not on their website or even pending) and The radio committe may have gotten some bids (which incidently had to be unloaded using a dolly) but, nothing has been approved and The city is in no agreement about what the police dept wants to have. According to Ken, they still want every handheld radio to be able to determine it's GPS location and transmit that info the dispatcher when the unit talks. (How much do you think that will cost? $$$$$$$$$$$$$$$$$$)

What really got me was when Ken was saying that the current system doesn't allow them to do what they want it to do. .. But it seems that the sytem that they have is capable of doing so much, yet they choose not to make use of any of it. Some of these include:

1) Transmitting "hot shot" calls on 155.370 intercity and retransmitting any pursuits or serious calls over this frequency to allow any nearby law enforcement (Travis County, DPS, TABC, UTPD, Capitol Police) to assist. They can do this now but they don't and claim they don't know how. Don't even ask a dispatcher how to put a phone (patch) onto their radios. They used to know how to do this but I haven't found anyone who does now. EMS used to put the caller "on the air" when they were having trouble trying to find an address and the caller would say "they just passed me".

2) There are numerous other 460 and 453 frequencies available for city use. They are even licensed for 460.150 in Police Call yet this frequency has never become active.

3) It would also benefit to know that they can equip police cars, EMS units and Fire Trucks with channels used by other agencies. For instance.. the police could have the park channels in their radios. But they choose not to do this.. Also they could have Animal Control in their radios for the times that an angry animal owner is trying to run the dog catcher off the road. Fire Dept could have channels for the Health Dept to contact them directly about fires at restaurants. And as long as EMS and Fire have been responding together on calls... it took them forever to finally get 1 common channel that they could communicate on (453.500), now if someone could just figure out how to get the Starflight helicopter programmed in that same way because I don't think they can even transmit on all the AFD frequencies or all of the APD dispatch channels.. Such a shame to buy a fancy radio with the capacity to have multiple channels and then only use about 10% of the memory. (a San Antonio police helicopter tried to assist Atascosa County SO when 3 police officers were killed this month but due to their not having the proper
radio frequencies, they were unable to communicate directly with them)
Sound Familiar? Austin Fire and EMS still need another fire/med frequency and it wouldn't hurt to give the police access to this channel too so they can ALL be together on the same incident.

I may have misunderstood but I took Ken statements to say that a new system would give them the ability to all have each other's talk groups... and All I can say is that they would have that capacity right now if someone would just program their radios correctly. They do not need to spend Millions to achieve this.

Everyone always asks me why some APD cars have the VHF antenna on them.. and I have talked to many officers.. Yes.. it's for 154.950 intercity..but most of them just leave it turned off because there was too much static from the radios and new officers aren't even told how to work the VHF radios. I have yet to find an APD officer that correctly knows what every button on their radio does or how to even work special functions like the scan mode. If there is an officer that knows, ,then they aren't telling anyone else cuz this info is not being taught to new officers.

4) I also continue to hear in amazement when they find out that EMS, Fire and APD can actually directly talk to each other using their MDT's. Yet most of the APD guys are afraid to communicate with EMS and vice versa. EMS always has to "stage" for at risk calls.. yet.. no officer ever sends the EMS unit an MDT message or (heaven forbid) switches over to their radio channel to tell them that it's ok to enter.
It all has to be done through the dispatchers.. The APD officer has to tell his dispatcher to send a CAD message to EMS and tell them to Enter and then EMS dispatcher pages through her messages.. gets the APD dispatcher's message and then will tell the EMS unit that it's ok to Enter. This should happen relatively fast but unfortunatley the dispatchers are usually in the middle of something else so there is at times a huge delay.

I remember riding with APD and we went to what was supposed to be an attempted suicide at an apartment. We go to the apartment and we realized there was nothing to the call and we Code 4'd it. Then the officers just hung out in the hallway of this complex doing what officers do best.. just standing around talking and then about 10 minutes later we walk out to the parking lot and there across the street is the EMS unit.. just sitting there waiting for some type of signal to enter.. And here the call was already over with. It's stuff like that, that really gets to me. Is it APD's fault for not telling EMS to cancel? Is it EMS's fault for not letting APD know that they were sitting there waiting? Perhaps both of the above messages were passed and sitting in the dispatchers cue and not yet read... wouldn't it have been easier for the EMS unit to have come up on the police channel and remind APD they they were still staging across the street. Sounds simple enough.

Oh well. sorry for rambling and I don't mean to offend anyone.. I just see it from all sides. I think everyone just needs to talk about their problems and try to work them out .. without having to spend money and go to a fancy 800 or 900 Mhz Trunking or Conventional Digital or Analog system. All the above can be achieved with better communication and proper programming and training in use of the radios. Suppose they have to buy a few more VHF or UHF radios.. Still a whole lot cheaper than throwing the whole system away and starting all over again from scratch.

I would be more than willing to step in and help the city with these issues.. but noone is asking me and I'm not on "The Committee".

116. 414.750 is Postal Inspectors

Yahoo group: CenTexComm
Date: 1999-10-29 21:52:07 UTC
From: Robert Barker
Topic: 116 Message: 116

414.750 is the US Postal Inspector and they do work a lot of postal activities. They have been following mailmen lately.. Don't know if they are after the mailmen or trying to see who is picking up the packages.

I heard a report that they were watching an apartment complex mail kiosk at 2AM about a week ago.

Actually there has been a lot of federal activity this week. I have heard ATF talking on 165.2875
and Just heard IRS this morning on 418.225.

Also I have been watching 166.075 for some time. This may be FBI but I have been unable to confirm who is using it.

118. 409.025 and misc

Yahoo group: CenTexComm

From: Robert Barker
Topic: 118 Message: 118

409.025 is used by the Veterens Administration .. They are located at Ben White and I35. They are on one side and IRS is on the other. I think IRS is on 164.175 for their Building operations.

Two buildings side by side and they have different bands. Sounds like DPS Capitol on 460.125 and DPS Capitol on 155.445... Someone was really thinking when they did that.

I would love to get the inputs to the above freqs for Veterens Admin and IRS. I'm not sure about the IRS because I haven't heard it in awhile but I think that is right.

Also there are at least 1 or 2 freqs used at the Main Post office on Cross Park which is near Hwy 290 East. They are 164.625 and 164.350 if they are still using them. Inputs anyone?????

415.200 is used at the Federal Building Downtown.. they have a phone patch.. They had a bomb Threat on Halloween night about 2AM. Pretty Interesting Listening. Bomb Threats are 10-89. Remember that.. one APD officer asked what a 10-89 meant. I don't think they answered him.

Also since there is so much talk in the news about the Prison out on 969 (MLK way out east).. They are on 452.425, However with the state taking it away from Wackenhut.. they may change to state TDC frequencies... usually around 153.815 and 153.905. The 2nd freq is a common channel for all prision escapes. TDC doesn't mess around when a prisoner escapes... they bring in the bloodhounds.

I'll have to get back to you on the 410.225 ... Could you have been close enough to the Veterens Admin for it to be an input???

121. will a new radio system help austin?

Yahoo group: CenTexComm
Date: 1999-11-12 05:14:58 UTC
From: Robert Barker
Topic: 121 Message: 121

Here is another example of the radio problem that occurs with Austin and other agencies and relates to any changes to a new radio system: Frank Sector, early Thursday Morning about 1:30 AM and there is a rollover collision on I35 at Slaughter. Supposedly while the wreckers were hooking up, A Mazda pickup had a female driver who displayed a knife with blood on her and appeared to have been kidnapped. She left SOUTHBOUND. {OH, NO .. not Southbound.).. Well apparently a wrecker driver from Round Up Towing saw the incident and did attempt to keep up with the vehicle. As hard as the FRANK sector dispatcher could.. he was unable to relay the play by play location updates between the Wrecker Driver back to his dispatcher back to a 911 operator and then messaged to the dispatcher. Frank Radio was also working a shooting of a Manor police officer at the same time so the dispatcher was busy.

And as I commented on last week... APD is still not using intercity 155.370. No way for the wrecker driver to be able to communicate with APD. (Hint, I believe in San Antonio the wreckers have a frequency to talk directly with the police on) Anyway the vehicle went well into Hays county.. Hays County deputies are on LCRA' s 900 Mhz system. Travis County SO may have been in the area but they didn't know about it either and neither did DPS.

A few (as in one or two) simple presses of a button would have relayed all the repeater traffic or at least the dispatcher's traffic onto INTERCITY 155.370 which would have been monitored by all the above agencies including others. (except APD)

IF and when Austin does go to a more sophisticated radio system...none of this will be resolved. We will still always have agencies that are on different bands and have no way to communicate. You can't expect Hays Co to get APD frequencies but you can utilize the standard intercity/interagency frequencies that have been in place for some time now by linking whatever radio system you have to the intercity frequencies. Austin chooses not to participate in this at all.. they will not even Monitor intercity base or intercity mobile freq of 154.950. I don't even think the Travis County SO dispatch does, but at least the mobiles do and so does DPS.

Also if you were listening tonight (Thurs Night)... on 460.025 Ch 7 and being repeated all over the city. You could hear a VICE sting being conducted. They were talking about customers paying money for "blowjobs" using that word. It's ashamed that they can't use some water/wastewater trunked radios for this type of surveillance. No need to tie up the entire city repeater with an operation that is being conducted within a 1/4 mile area. Perhaps they could just try the DIRECT setting on their radios and at least it wouldn't be broadcast all over the city.

))))))

girls are 3A and 3B. The Dog is 3D.

DPS Criminal Law Enforcement has 2 repeater channels here in Austin. They are on 155.505 and 159.090. This is everything from Narcotics, Computer Crimes, etc. Many transmissions are scrambled.

There is a Nationwide Law Enforcement Channel on 155.475. This was established after each state adopted it's own intercity channels. I have heard DPS units on this channel before but not much. Just might want to keep it in mind. I have never heard any other agency in Austin on this frequency.

STARFlight's radios are programmed for law enforcement as well and fire and ems agencies. normally STARFlight uses apd ch 8 to avoid tying up a primary apd dispatch channel.

too much going on the the city to have apd officers use firecom/firemed 3. it only takes a couple of good calls to cause firecom3 to become to congested as is.

>

the ability of the radios is there, but not enough freqs to allow "common talk channels" and still have primary dispatch channels. apd and ems primary channels are just too busy to allow other traffic on them.
>
>
> 4) I also continue to hear in amazement when they find out that EMS, Fire

most mdt's in the system are mounted in the vehicles and not realistic to expect an officer to leave the scene to type a mdt message to the ems unit. plus he probably does not know which ems unit is responding, and if he did know which unit was responding, there is no guarentee that that unit would actually make it onscene. they might get diverted to another higher priority call or drive up on something and have a different unit show up on the officers scene. the ems primary channel is just too busy to allow apd to use it.

ems is going to "silent running" in the near future to alleviate some of the radio traffic. for non-call related moves (eating, getting supplies, administrating, etc) the unit will just unit move on the mdt and not verbalize it on the radio. call related traffic (responding, enroute, onscene, ect) will still be verbalized.

ems units are specifically forbidden to transmit on apd channels. ems handhelds and mobiles have all the apd/afd/tcso channels, but are for monitoring only, except for afd channels.

it's more than training and programming. lots of places are radio dead zones and everybody needs more channels.

i doubt that wreckers could get licenesed for intercity, since it's a police use freq

> A few (as in one or two) simple presses of a button would have relayed all
> the repeater traffic or at least the dispatcher's traffic onto INTERCITY
> 155.370 which would have been monitored by all the above agencies

if memory from my dispatch days serves me well, blanket broadcasts are strongly discouraged on intercity.

> Austin chooses not to
> participate in this at all.. they will not even Monitor intercity base or
> intercity mobile freq of 154.950.
they are probably too busy taking care of the city to monitor a channel that has a lot of "whatcha doing?" or "where are you going to eat" type of traffic.

>
> Some parts of the state also use 155.445 as a relay channel... Not here..
> In Austin.. this frequency is used by DPS Capitol Police. They

Re: APD going 800.
I was in Bryan during the Jasper trial and noticed that Intercity 3 was rebroadcast on their 800 system. I drove over to the courthouse and verifed by listening to their conversations on 800 and observing the deputy sheriff using a VHF radio. I later heard a Texas A&M officer talking with a DPS trooper. The trooper appologized for the bad transmission, since he was on the west side of the Brazos and was using his VHF radio. TAMU is 800 mhz.

In Houston, there is an interconnect between the Harris County system and the Houston Police Department. Unfortunately, it is not used as often as it should/could be, and often, when used, certain TAC units get upset, since they think their UHF channel is their special TAC channel, and not the interagency channel. When used properly, and the link is up, it is great. Which is why some agencies avoid using it and manpower is wasted by having to have one of the agencies provide a car to provide coordination communications. (personal opinion included)

But, as someone posted earlier, proper training is needed and all need to know is a "common" frequency, as they do in Bryan, not one reserved for special units. Those are available, and non-repeatered for security reasons. And, some of these also have dvp capabilities.

130. TCSO

Just wondering if anyone had Travis County Sheriff's unit numbers. I heard a unit (Edward 51) that I have never heard on the radio before. Also, is 153.935 still being used as the east dispatch channel?

Wes

133. Williamson county .. has 11 frequencies

Yahoo group: CenTexComm
Date: 1999-12-07 07:35:48 UTC
From: Robert Barker
Topic: 133 Message: 133

As far as I know, Williamson County is using 11 frequencies for their Trunked Radio System.

01 854.9875
02 856.9875
03 857.9875
04 858.9875
05 859.9875
06 860.9875
07 856.9625
08 857.9625
09 858.9625
10 859.9625
11 860.9625

I am aware that there are some other frequencies listed in Police Call but then again, I am also aware that Police Call said that it has deliberate misprints to determine if someone is copying without giving them credit.

If anyone hears Williamson County on any other 800 Mhz frequencies, please let me know.

I have no idea what the data is that you heard. I do know that it must be something that the trunktracker recognizes, but you would also have to have all the correct frequencies being trunked, to get all the transmissons.

Cedar Park just recently licensed for 5-800 Mhz frequencies but they are not active yet. They refuse to have anything to do with the Williamson County system and will not even monitor it. Perhaps if you hear voice traffic up in those parts, then it could be Cedar Park but I don' think so. Poor Cedar Park, If them and Taylor would just get on the Williamson County radio system, then it would be a whole lot easier to coordinate units. Either that or tie an 800 Mhz talk group to a VHF or UHF repeater.

I also heard that Capitol Metro was not going to wait on the City of Austin to try and figure out what they want and they may be on the LCRA system very soon. Apparently the CARTS people are liking it a lot and told Cap Metro to hop aboard. I can't believe that they would not wait on the City of Austin to make up it's mind but then again, they have so much money that they could go on LCRA's system and ditch it a year or 2 later when Austin gets going.

I have to say that I am very impressed with the coverage offered by the LCRA system with all the towns. For a handheld in Boerne to be able to talk to a handheld in La Grange. That is incredible!

135. Cedar Park has 800 Mhz frequencies licensed

Yahoo group: CenTexComm
Date: 1999-12-07 19:15:38 UTC
From: Robert Barker
Topic: 135 Message: 135

Cedar Park is licensed for :

856.7625
857.7375
858.7625
859.9375
860.7375

I have not heard any activity on these frequencies but you might want to keep them or at least one of them in your scanner. This could be for the PD but it could also be for a public service such as the water department.

As far as I know Cedar Park Police are using 155.085 . The input to this repeater is 155.790 which is the same freq used by Rollingwood PD as their tac channel. Cedar Park does have a backchannel that they refer to besides 154.950. I have never found this channel so please let me know if you find it. I at first figured this would be the 155.085 simplex but it isn't. I also thought it might be one of the old Williamson County Freqs but I haven't found it yet. (old freqs are 154.650, 154.860, 154.725, 155.625, 155.970

Cedar Park Fire is 154.370 simplex. Leander Fire (right next door) is on 460.625. How Convenient.
Leander PD is on 155.880 (input is 154.100)

137. Frequency Coordinator

Yahoo group: CenTexComm
Date: 1999-12-07 20:03:21 UTC
From: Robert Barker
Topic: 137 Message: 137

A guy named Ken Yoder at DPS is supposed to be the Frequency Coordinator for this area. I have written to him several times offering my service but he has never responded to me.

I don't know if he just doesn't have a good frequency list or what is going on when such close assignments are made.

My friend set up radios for Liberty Hill Fire Dept. He came up with about 4 different frequency possibilities for the input to their 158.895 repeater. He had monitored them and found them to not be in use. But Ken rejected all the freqs and gave him 155.955 - The input to Travis County SO Ch 2!!!!

That may be one of the reasons that Travis County is no longer using 153.935 (155.955) That repeater was plagued with so much interference that they just haven't been using it. They seem to have switched all South operations to the 155.310 repeater after they just relocated it to 2222 and 620. Before that, the repeater was at the Lago Visa Airport and the antenna was leaning over almost sideways for months, making the repeater's coverage less than adequate.

I would very much love to be involved with frequency coordination for this area. There are many VHF and UHF frequencies that are available for use. And the FCC has just opened the gates and allowed so many more frequencies. There is no excuse to say that these freqs are no longer available. There are plenty to use and lots of tweaking that can be done. I offer my services in this area. I feel I would do a much better job and could save everyone a lot of money.

Listen to 154.965. It's supposed to be Street and Bridge Ch 2 but you will hear Lockart or Luling PD coming through the Austin repeater. This has been going on for years. A simple CTCSS or PL tone switch may fix the problem but I suspect It's being used as another example for frequency crowding and one of the reasons why Austin needs to move a Trunked Radio System.

From: Glen Reid
Topic: 142 Message: 142

Normally I am a "lurker" on this list. I find it to be a good source of local information, but do not post.

I have recently read some posts impugning, if not defaming, the actions of the frequency coordinator for local government and public safety in the Austin area.

In fact, Ken Yoder is the APCO (Associated Public Safety Communication Officials) Frequency Advisor for the entire state of Texas.

I am personally acquainted with Ken. I have worked with him on a number of frequency issues, including coordination for my local volunteer fire department. The criticisms leveled at Ken here are unfair and demonstrate a lack of understanding of the coordination process and the frequency use situation,particularly at vhf high band, in Texas.

In every instance I have found Ken to be conscientious to his duties and fair in his application of APCO frequency coordination principles. I haven't always agreed with the outcome, but I find Ken's recommendations to be reasoned and sound.

The coordinator's job is to recommend frequencies that will minimize interference amongst users. Sometimes there are no "good" frequencies to be recommended. Ken does try to keep co-channel and adjacent channel interference to a minimum and should be commended for his efforts.

Obviously, he has a mostly thankless job.

The proceeding is my personal opinion and does not necessarily reflect the position of MOTOROLA or anyone else.

Regards,

gr

At one time Parks and Wildlife was able to talk directly to Austin via their repeater system. I guess they can still do that. DPS has a good radio system now and like you said, what about the parts of the state where LCRA is not located, which is most of Texas.

i agree. there have been many posts slamming public safety agencies for thier radio operations and so forth. i doubt those posts come from someone that has had to deal with the different government agencies (city, county, state and federal) that it takes to make those changes. private business snaps thier fingers and make policy changes that take immediate effect. governmental agencies usually have to follow the chain of command for policy changes and then it has to be approved by the legal department. when you are dealing with tax dollars and politicians, it becomes most inefficient. you have to go with low bid (usually junk) and follow all sorts of rfp (request for proposal) and bid regulations.

leander fd may have had all thier radio equipment donated, therefore requiring uhf freq. i don't know if that applies to them but not unheard of in the vol fd industry.

keep in mind that freq usage/allocation is not for the benefit of scanner users but for that of those agencies that have them.

they problem does not always lie with the city of austin. just look at the new airport and how the fcc allowed a private company's radio operations to cuase repeated interference with ems main dispatch channel. does baggage pickup traffic take priority over heart attacks?

just my 2 cents worth (i know, you think 2 cents is over priced!) chris

Subject: [CenTexComm] In defense of the Coordinators

From: Glen Reid <k5fx@...>

Normally I am a "lurker" on this list. I find it to be a good source of local information, but do not post.

I have recently read some posts impugning, if not defaming, the actions of the frequency coordinator for local government and public safety in the Austin area.

In fact, Ken Yoder is the APCO (Associated Public Safety Communication Officials) Frequency Advisor for the entire state of Texas.

I am personally acquainted with Ken. I have worked with him on a number of frequency issues, including coordination for my local volunteer fire department. The criticisms leveled at Ken here are unfair and demonstrate a lack of understanding of the coordination process and the

frequency use situation,particularly at vhf high band, in Texas.

In every instance I have found Ken to be conscientious to his duties and fair in his application of APCO frequency coordination principles. I haven't always agreed with the outcome, but I find Ken's recommendations to be reasoned and sound.

The coordinator's job is to recommend frequencies that will minimize interference amongst users. Sometimes there are no "good" frequencies to be recommended. Ken does try to keep co-channel and adjacent channel interference to a minimum and should be commended for his efforts.

Obviously, he has a mostly thankless job.

The proceeding is my personal opinion and does not necessarily reflect the position of MOTOROLA or anyone else.

They have a state wide VHF high band, repeater system that covers probably 90% of the geography. They also communicate on many local SO systems.

>
> True, the LCRA isn't a statewide system, but it would allow DPS from Waco to
> San Antonio to west of Houston to west Texas to communicate effectively with
> one another.

How often does the DPS Trooper in Waco needed to talk directly to his counterpart in San Antonio? My guess is -- not often. The reason they have multiple regional comms stations is to provide effective communications for the DPS region and so they are not subject to widespread communication interruption due to a single, system failure.

By the way, Waco, San Antonio and West Texas are not in the Colorado River watershed and therefore, by definition, are outside the LCRA service area. Why does does LCRA need coverage there?

> No, this doesn't help DFW, Greater Houston, Lubbock, El Paso,
> etc. but it's a start.

DPS will still need to maintain their VHF system in these urban areas and statewide. They can't have some units with just VHF radios and others with just 900 radios. The loss of system integration would create chaos. What does LCRA system bring to the party to make it worth the extra expense? I am sure LCRA doesn't give away EDACS radios or airtime.

I guess I'm just dense but, I don't see what "it's a start" to...that they aren't already doing more efficiently and effectively with their own system. But, I am interested in your point of view and how you came to it.

LCRA has 3 distinct service areas.

There are the counties directly on the lower Colorado River. Those are LCRA's "statutory counties." LCRA provides a variety of different services in these counties, such as parks.

There are counties in which LCRA provides electricity, as a wholesaler of electricity. (e.g. Gillespie County).

And there are counties in which the LCRA provides water. For example, legislation in the recent legislative session allowed LCRA to sell water to utility districts in Williamson County.

So, yes, the LCRA needs coverage in a variety of areas, not just directly along the Colorado River.

And finally, LCRA IS selling access to their system, it's not a charity operation.

Hope this clears some stuff up.

Wes

Wes,

Thanks for the clarification on the LCRA areas of service statutory,
electric and water.

I understand, but the specific examples that I was asking about were
"Waco", "San Antonio" and "West Texas".

Perhaps, these are actually not in the LCRA radio coverage, because they
don't seem to fit any of your service area examples.

Did I miss understand something?

The FCC has licensed 900 MHz repeaters to the LCRA covering this broad area.
Whether or not they actually have operational repeaters is another story.

154. Article on the City of Austin's Radio System. Communications Breakdown

Yahoo group: CenTexComm
Date: 1999-12-12 04:57:31 UTC
From: Robert Barker
Topic: 154 Message: 154

I just stumbled on an article in this weeks Austin Chronicle regarding some of the same stuff I have been ranting about the last few weeks. I had nothing to do with this article.. check it out for yourself:

http://www.auschron.com/issues/dispatch/current/pols_feature3.html

It basically talks about the radio team that was formed years ago and has tried to create such a mammoth radio system that many of the other agencies are tired of waiting and tired of all the politics.
Some the best quotes from the article:

More than two and a half years after Austin voters approved $38 million in bonds toward the purchase of a new emergency radio system, the network -- which was sold to voters with the promise of being fully operational by 1999 -- is still at least THREE YEARS away from installation.

Public safety entities could not communicate directly with one another.

(* Uh.. they still won't be able to on the new system.. Williamson County EMS cannot talk to Round Rock Police or to the Sheriff's Dept. They don't know how and they don't do it.. even after stuff like Jarrell, when the radio system went down. There has been a lot of talk about "public safety common" channels but it just will not work. Every agency wants to remain on their dispatch channel. The only way it will work is if all the dispatchers come to that channel too it just does not happen*)

The proposed radio system is full of expensive and superfluous bells and whistles.......many of Austin's public safety officers have privately come to distrust the purchasing process, and those in the city responsible for what they say has become an exercise in "empire building"

These are management types who don't have to rely on a radio to get them help. Their asses are not on the line. Our asses are on the line and we aren't laughing." Nor were they laughing in December 1996 when a six-alarm fire burned the campus-area Centennial Condominiums. "That was a mess," says one fire department official. APD squad cars "were blocking the fire hydrants and we couldn't even talk to them directly [via two-way radio] to get them to move their cars." (* uh, see above *)

And no one laughed in December 1997 either, when APD officers mistakenly shot a fellow officer, as well as an off-duty Travis County sheriff's deputy, who was seriously injured, while answering a domestic violence call in Southeast Austin. "It was all caused by the radio system," says an APD officer. "When the deputy was coming out of the house they said, "Cops coming out,' but the other officers couldn't hear that, so they started shooting. Our radio system is an absolute piece of junk."
(* you think it's confusing now.. just wait until everyone goes to

trunking.. Do you honestly think APD and Travis County will come together on the same radio channel.....NOT! They are like cats and dogs.. they do not get along.. and so is the relationship between APD and EMS... they are in the same room at 911 and they refuse to even acknowledge each other.)

With the current network, it is impossible for the area's various public safety entities -- APD, AFD, and EMS, as well as the Travis County sheriff's office -- to communicate directly with one another, a horrifying thought when all three departments are responding to the same emergency call. (* again, Williamson county has a trunked system but they don't get on the same channel. Neither do the units in San Antonio.. so don't expect the Austin system to achieve this or you will be very disappointed. This can be done with now today using the already existing channels or even tying them together. All you have to do is EDUCATE the agencies on how to do it and convince them that it needs to be done.)

****

This is a good article and it shows some of what's going on in the background. As I have said before, I could come in and serve as a link between APD, EMS, Fire, Travis County, DPS and all the other agencies. This stuff is in my blood. I go crazy when an officer gets into a pursuit and tells the dispatcher to notify the next agency and it's like nothing happens and there is a huge delay. And unfortunately sometimes property and lives depend on it. I totally agree that had APD had knowlege of the Travis County officer on the scene, he would not have been shot. Many more lives could have been saved. and the damage would not have been as bad had there been better communication. This doesn't require a $38 million radio system.

Topic: 155 Message: 157

Wow, I had no idea the article on Austins' radio system would generate so much conversation. I only posted it on here and on the news group rec.radio.scanner but others picked it up and ran with it on other Email groups like dfwscan and T2 (Trunktracker II).

Thanks to everyone for all the individual Emails and your comments.

First of all let me relate what happened on Sunday afternoon at the SWAT standoff in Wells Branch and that will give you some idea of the serious radio problems that exist. We had 2 SWAT teams in place. One from Austin Police SMT and the other was Travis County SWAT. Despite that fact that I have previously heard TCSO SWAT using a 458.xxx in the past, they choose to conduct their operations on 154.950!. This is the state-wide intercity mobile channel. Any passing unit on I35 could have easily drowned their tac communications out. APD, as always, just used their Channel 8. 460.500 Several times throughout the standoff, the repeater would be keyed up by some other unit in the city and it would drown out their communications. It's not uncommon for APD officers to come up on this channel and starting talking about something totally unrelated and then be reminded that this Channel is restricted for SMT. Both used a very bad choice of frequencies as they are too commonly monitored and too easy to be interfered with.

As an example at one point in the standoff, I heard APD saying they were hearing a banging sound. What they were NOT told was that Travis County was trying to open the front door to insert the robot. It was a few minutes delay but then the Comm van folks finally came up on 154.950 and asked Travis County if they were doing something, and they said yes. Then they finally relayed back to APD what was going on. At one point the TCSO guys had their gas masks on and were standing in the hallway outside the suspect's door for over 40 minutes because they "thought" APD was about to shoot the tear gas. That happened much later. If the bad guy had come out of that apartment and started shooting.. it could have been a disaster. Two SWAT agencies aiming guns without direct communications. There just wouldn't have been enough time for someone in the Comm van to relay back and forth what's going on. I'm glad that it all ended up ok for the officers but It was a pretty scary ordeal from a communications standpoint.

All they need is to find a common frequency. Something that is not being monitored by every law enforcement agency in the state or every APD officer in the city. The 458.xxx tac stuff that I heard TCSO on before was excellent. APD could also have used some of their lesser used 460's such as 460.375, 460.475, 460.150. They should have UHF tac radios and have each other's frequencies.

The point that I wanted to make is that even though the city will say they need a new radio system for a lot of reasons, The primary reason that they

keep bringing up over and over deals with coordination between agencies. This is talked about several times in the Austin Chronicle's article. I'm afraid that no matter what system the city decides on and no matter what talk groups are created, that without some more training and practice, the agencies will not ever be comfortable talking to each other. If they don't do it normally, they will probably not do it in times of need. And my point is that they can talk to each other now, on existing frequencies without the need to spend $38 million.

They can also fix some of the problems that I pointed out such as Lockhart coming though on 154.965 (Street and Bridge Ch 2) or the intermod on 153.935 (TCSO Ch 2). These could probably be fixed by changing the PL or CTCSS tones. But I can only guess, that they don't want to have to reprogram every mobile and every handheld out there. Instead they just tell these agencies that there is nothing that can be done and until they go trunked, then it will continue to happen.

I don't blame anyone in particular. I think everyone is doing as much as they can. What I think is happening is a lack of communication. I fear that the radio guys really don't monitor the systems they are working on. And as the article states, the committee making decisions about the radio system is not in tune with what the officers on the street want. I mentioned about the coordinator, Ken Yoder. I'm sure he has a tremendous technical background and has a lot of knowledge. But I have also talked to several people who have tried to get several frequencies approved and he flat out refused to do it, citing no specific reason. What looks good on paper, may not work over the air.

Most of my background and experience, as Chris asked me to cite, has just been listening and following frequencies all my life. I've been into scanners for over 25 years. I grew up listening to DPS and fire departments on low band and now I'm trying to track down this 900 Mhz stuff. We've come a long way with communications. I have talked to many officers, EMS and Fire people and I hear from them what works and what doesn't work. How about the wrecker drivers and other people involved in many of their activities. How about the lone Capitol Metro bus driver being asked to bring a bus to the SWAT scene. Even something as simple as that needs to involve coordination. I think that most of these agencies would respect their department heads a lot more if they would just get out and talk to the guys on the front line. Chief Knee and the assistants should ride out, hopping from one APD car to another and not make any official announcements what unit they are in. Let the units do what they do best and just observe. But most importantly - TALK to the guys on the street: What are their concerns? What worries them? What do they want to see?
I am not an engineer and I don't possess a Radiotelephone license. But I'm also not tying to make money off the city like I feel some vendors and organizations have done in the past. I also don't favor one agency over the other. I think they all need to work together if it's gonna work at all. I'm not getting kickbacks from Motorola or GE but I'm worried that some people are.

Here are some of the wonderful comments I have received:

From: "Russell" <rwadams@...>

"Very interesting article. I thought the statements regarding UHF systems being basically museum pieces was interesting. There are still many cities, like Dallas, who have perfectly good UHF radio systems that are far from obsolete. While busy, they are still quite usable. I was in Austin last week, and while their system is very busy, it did not seem overloaded, and certainly not antiquated.

Also, even on systems, where interoperability is available between PDs or FDs or even between the PD and FD in the same town, this type of communication rarely takes place. Fire departments are by far the best at using radio systems to interoperate. This is evident in their many years of "mutual aid" agreements and systems. FDs are good at interoperability. Law Enforcement could do alot better at communicating with each other, but they simply don't do it. Perhaps this is a training issue and the North Central Texas Council of Governments should push harder for Law Enforcement to work closer on a daily basis."

From: elentz1 <elentz1@...>

" Down in the Houston area we have various types of systems
including the antiquated UHF and even older, VHF systems. The County has implemented a very large zoned Motorola Trunked system that appears to be working very well with users in other counties using the system. I think the whole thing in a nutshell is if the organizations spends the money to install
a proper system then it will work well. If not, you get junk. If you folks will remember way back when, some cities had very good radio systems and others could hardly talk across the street.

When Harris County first installed their Trunk system there was a channel for
the Houston Police Dept. and Harris County to share a common interconnect between the UHF and 800 system. It was not used very often for unknown reasons
and even today still not used except for Houston Police to do undercover work
on. Several other agencies in the area have links between systems that dispatchers have to turn on and they work very well. Most of the Channel Industries have 800 or 900 MHz radio systems that include link channels to the
Channel Industry Mutual Aid 488 frequencies.

From what I can tell all this talk about what is good and what is bad is among
people that have very little idea what it takes to make a radio system work well. Also politics will get in the way of much progress very quickly."

If the city wants to play around with trunked radio, then I suggest they play around with the Water/Wastewater system. The freqs are already licensed to the city, and the towers are already in place.
Let some APD, AFD and EMS guys try out the radios and see what they think. The big antennas jabbing their armpits when worn on the waist. See how it works when you are doing 100 Mph down the interstate. Or standing next to one of those HUGE Econoline Ambulance Trucks that never turn off their engines. (For that entire SWAT standoff, 2 EMS units ran their engines the entire day)

I'd also like to see some of the AFD or EMS channels installed and used as SCENE channels. Next big incident (like the Centennial condo fire), everyone on the scene can be on the same channel. Even something as simple as the upcoming Motorola Marathon or Austin A2K Celebration. But it's not going to work unless the big 3 - EMS, PD and Fire are all together. If they are on the scene, then they need to be on that channel. Wreckers may even need to be included, Street sweepers, downtown rangers, the barricade guys, courtesy patrol, TxDot, DPS. They can still use their own freqs, but they need to have a radio and monitoring the SCENE frequency. And I'm not talking about a dispatcher who is not there. It doesn't even seem to work when they bring out a Comm van and park on the other side of the complex and are not even aware of what's going on. You could however, LINK each agencies frequencies as needed. This would be most helpful when a pursuit is in progress. You can't expect units to switch channels but if a Pursuit starts in a Sector, then as that unit crosses into other sectors, the radios should be linked or units told to monitor that channel. If the pursuit goes into the county, then the APD and County radios should be linked briefly until the pursuit is over. Same with DPS. If they would just retransmit on 155.370 intercity, then that would be a tremendous benefit. I don't know if any Engineer or Radiotelephone person would even know that.

Anyway, I don't want to go on and on. I just wanted to voice my comments and concerns about all the money and time being invested and I doubt that it will achieve the result that they are looking for. If anything, it may create even more problems for the city. I think they have a very good radio system now. It may need some upgrades, but in no way is their equipment, museum material. Austin has always had some of the most state of the art equipment. We were one of the first cities in the state to get MDT's. We had ANI before anyone else ever did. Many of the police frequencies have different PL tones making it a bit more difficult for hackers to gain access to radios and cause problems. This isn't the case in Houston or Dallas. We had the RAT packs before anyone else even heard about them. And they are trying to experiment with the FLIR systems on cars and helicopters (even though the LT car with the FLIR is seldom available when needed). We had the first EMS helicopter I had ever heard of that would be the first unit onscene and would land in front of a house and go up and knock on the door. (Houston's Lifeflight won't respond unless specifically authorized by proper agencies). And I still laugh when I hear AFD asking for a Knox Box to be opened. This all costs $$$$ and It's just neat to be

in a city with lots of toys like this. Whatever, they decide to go with, I know it's gonna be big and impressive. I just hope it will work good and not be worse than what they have now. And I still will try and be involved somehow in the process. I have grown up around radios and I'm not giving up yet. Wherever they go, I'll be there with them listening to the action.

Thanks again for all the comments. I'm also keeping track of all the Email I get where trunked systems have failed in the past so let me know about those too.

Ladybird ("Victoria") comes to Austin quite often. They use SS ch Mike 165.2125. I understand this to be linked to the stuff out in Johnson City where the LBJ Ranch is located.

Bookshelf is the LBJ Library but she spends most of her time here at the Wildflower Research Center at the south end of Mopac. Does anyone have frequencies for the Wildflower Center???? I have never been there personally.

SS Main Austin Repeater is Baker: 165.7875 haven't heard it in awhile

This article is almost a carbon copy of many articles printed
in Kansas City Missouri.

Years after voters approved the new system, there are more problems
with the 800 MHz trunked system than the old.
Mainly handheld communication problems with other units only a few
hundred feet from them!

I even saw a TV news story about KC firefighters using CB walkie talkies
on the scene of a fire because of the faulty NEW radios.

Unlike business communications, the crime scene or other emergencies
can't be moved to the nearest hilltop.

Evan

168. Has San Antonio Made a Change?

Yahoo group: CenTexComm
Date: 1999-12-22 17:36:52 UTC
From: Robert Barker
Topic: 168 Message: 168

My friend said he is no longer hearing the 600 series talk groups on the San Antonio TX Trunked Radio System. Has there been some type of change? I knew they had announced they were abandoning their Motorola System to go to GE Digital but I didn't think it would happen that soon.

Also a lot of agencies including San Antonio and Austin have realized that many of their radios did not have any simplex frequencies in case of a radio failure (Y2K perhaps) so they are having to bring all radios back for reprogramming.

I have been getting a lot of Email asking me what freqs will be used in Austin for A2K Celebration downtown. I don't know. We will have to wait and see. Don't expect any surprises however
APD just usually sticks with Ch 7 460.025 and Ch 8 460.500. They have been more active on Channel 11 lately 460.375. They still don't seem to remember that Ch 12 460.475 is available to them too. That repeater is weak!. but they could use it simplex. I wished they had done that for Trail of Lights instead of clogging up Ch 8. Channel 9 460.225 is gone. They forgot to renew their license and the state took it over for maintenance stuff.

Don't forget Downtown Rangers on 453.2375. They also may be using 453.3375 as a Channel 2 (old airport stuff)

I think Capitol Police will also try to help out at A2K. I was told that their 155.445 is digital capable too but they don't do it.. (wonder why?)

Also the Horse Carriages on 464.025 continue to be a hoot. I love listening to these women downtown every night and now at Trail of Lights.

They used 153.530 for Parking last year. I don't know who has these radios as I only heard them once. I have not been to the trail yet so can't confirm anything. It would help if they'd stay open a bit later than 10pm and not close the day before Christmas!!

From: Robert Barker
Topic: 173 Message: 173

For those interested, there is a service called www.incidentpage.com You can subscribe for FREE for up to 5 areas of notification. I thought this might be interesting for those who want to keep advised on mass casualty incidents especially during Y2K. You can choose to be notified of all mass casualties or you can choose:

TX-Collin
TX-Dallas
TX-Denton
TX-Ellis
TX-Galveston
TX-Harris
TX-Kaufman
TX-Rockwall
TX-Tarrant
This might also be a good for those 200 or so people in the Dallas area that left the www.dfwscan.net site after they started charging for it. They started with 270 subscribers and are now down to about 70 paid.
Unfortunately Austin is not included in the pager notification even though they have an EXCELLENT notification network. Maybe we can try and get them to be included in the future.

From: Rick White
Topic: 176 Message: 176

Robert,

IPN receives its incidents for DFW from DFWscan.net. We have a contract with them to share major incidents. DFWscan does on average 130+ dispatches a month. The Dallas chapters of IPN only average about 15 per month. IPN does not sign up dispatchers for their DFW counties. Right now software changes are being made so that IPN incidents can be shared with DFWscan.net subscribers.

Other differences between DFWscan & IPN are the users ability to customize their settings to fit their needs. IPN is a all or nothing when you subscribe to a chapter. DFWscan is the only one that lets the user Select the Hours, Citys & Incidents they want to receive on their pager.

If the Austin scanner listeners are interested in starting a Austin chapter, I am more then willing to discuss getting a Austin Chapter started using the software I have developed. If they feel that they do not need software with all of the functionality that I provide then I would suggest talking to IPN about getting a Austin chapter started.

Thank You,
Rick White

From: Robert Barker
Topic: 180 Message: 180

I'm sending this to anyone who might be interested in subscribing to Public Data (no I don't work for them) They have just extended their records for several states. This is an excellent database and well worth the price.

For $25/Year you get about 250 Lookups of the following:

Driver's License search by number or name
Florida , Idaho , Iowa , Minnesota , Mississippi , Ohio , Texas , Wisconsin , DOB ...

Criminial records search of past offenses: DWI, Bad Check Writing, etc
Texas , TX Sex Offenders , TX Parole , TX Dallas Cnty , TX Travis Cnty , DOB , TX Sex Offender Zipcode ...

Voter Registrations
Texas , TX Dallas Cnty , TX Harris Cnty , TX Tarrant Cnty , DOB ...

Professional Licenses
TX Med.Exam. , DOB ...

Civil Court Records
TX Dallas Cnty Civil , TX Dallas Cnty Eviction ...

DMV - License Plate Yes .. you can run license checks!!
Idaho , Maine , Mississippi , Missouri , Oregon , South Dakota , Texas , Utah , Wisconsin

DMV - Vehicle ID (VIN) or you can check by VIN numbers
Idaho , Maine , Mississippi , Missouri , Oregon , Texas , Utah , Wisconsin , Wyoming

if you are interested.

181. Williamson County 800 system

Yahoo group: CenTexComm
Date: 1999-12-31 05:49:11 UTC
From: ExLngHrn@xxx.xxx
Topic: 181 Message: 181

I saw that both John Mayson's and Lindsay Blanton's web pages describe the Williamson County system as Smartnet. That isn't the same as SmartZone, is it? I asked because when I drove to Taylor yesterday, I was hearing the WCSO talkgroups loud and clear, but the RRPD talkgroups were scratchier. Makes it almost sound like there's 2 different towers, which would make sense considering how far Taylor (and eastern Williamson County) are from the tower at IH-35 and Westinghouse Road. This suspicion was further aroused when I drove into Taylor - the airport had 2 radio towers with microwave antennas, etc. Furthermore, this would be consistent with John Mayson's reports that only a couple of frequencies are being used on the Williamson County system.

Does anyone have any ideas/theories, etc?

184. Update Williamson County EMS Locations

Yahoo group: CenTexComm
Date: 1999-12-31 07:30:21 UTC
From: Robert Barker
Topic: 184 Message: 184

To follow up on Chris most excellent post of Austin EMS locations, I was able to dig around and get this list for Williamson County. Of course the EMS ops are primarily on the 800 system but they still page on 462.975.

Usual locations:
800 Georgetown area, east of IH35
801 Georgetown Command
803 Florence (manned by volunteers)
804 Round Rock
805 Liberty Hill/Leander
806 Round Rock North
807 Round Rock
808 Cedar Park
809 Georgetown area, west of IH35
810 Taylor station 1
811 Taylor station 2
812 Anderson Mill
814 to be assigned
824 Backup/training

The base is in Georgetown at 303 Martin Luther King St, same building as the Williamson County 911 dispatchers.

Regarding Wes' question of Williamson county being a SmartNet. I was always told that only one tower existed for the entire system. I-35 on the east side at Westinghouse Rd. (the shorter tower according to GPS) What I can tell you is that originally Georgetown was separate from the county, Round Rock and EMS. Georgetown was only using the 856-860.9625 and everyone else was on 85x.9875
And the .9875 stuff had a stronger signal south and the .9625 stuff had a stronger signal north. Perhaps the antennas were "pointed" in those respective positions.. who knows.

Plus I always thought that if there are separate towers, then each tower would have a separate control channel. (like LCRAs system) So if they are using more than one tower then we should be hearing multiple control channels and some stuff wouldn't come over one of the towers.

189. AFD/EMS question

Yahoo group: CenTexComm
Date: 2000-01-04 06:42:04 UTC
From: ExLngHrn@xxx.xxx
Topic: 189 Message: 189

I heard AFD working a brush fire off of Burleson Road today. The AFD dispatcher advised Battalion 6 that EMS had Support 1 responding. I remember ages ago that Austin EMS had a Support 1 based out of the central fire station as an extra aid unit. Is this the same unit? Or is it something different? And if it is, what is its usage?

Thanks in advance,
Wes

190. RE: AFD/EMS question

Yahoo group: CenTexComm
Date: 2000-01-04 17:57:04 UTC
From: Chris Howell
Topic: 189 Message: 190

support 1 is the rehab unit. it is staffed with at least one paramedic and carries full als (drugs/monitor-defib/iv's/intubation) and bls gear. it also carries specialized high-angle/trench and water rescue gear. it has a large amount of rehab supplies as rehab is it primary mission. it has 2-3 water coolers, power-aide mix and lots and lots of towels. it is sent on all box alarms to provide rehab support for afd/travis co fd. the rehab policy is to hydrate firefighters and medically evaluate them prior to him/her returning to firefighting duties (if they are not medically cleared to return to duties, they are "out-of-service" for the rest of the shift). the primary unit that support 1 runs out of is an old air force ambulance that was "given" to the city of austin by berstrom. it's a chevy box with an orange stripe instead of the regular austin ems paint scheme. the inside of the box has been reconfigured for its mission and is not capable (nor licensed) to transport patients. if the chevy box is down for repairs, they will be responding in one of the older austin ems ford ambulances (still not a transport unit although all ford are licensed to transport) support 1 also responds on all pinin's/rescues and "jumps" medical/traums calls if closer than the assigned unit. this is not the same support 1 that you refered to. aems now has only medic units. hope that clears it up for you, chris -----Original Message----- From: ExLngHrn@... Chris, as always, thank you. I've been home for the holidays (attending law school in Lubbock) and I'm not as up to speed on the radio monitoring in Austin as I should be.

Thanks again,
Wes

192. Ft. Hood Trunked System

Yahoo group: CenTexComm
Date: 2000-01-14 10:01:20 UTC
From: hilltop40
Topic: 192 Message: 192

Anyone know the frequencies for the trunked system(s) now at use at Ft. Hood?

Are they analog or digital? What type of system is it? Any programming info would help. I think it may be associated with LCRA, though a second one may exist associated with TU. I know at least one of them is in the 900 MHz region. I don't know if it is a separate system from the one in Killeen and surrounding areas.

Thanks in advance.

Hilltop40

193. Ft Hood TX Frequencies

From: Robert Barker
Topic: 193 Message: 193

I live in Austin Tx and have had a lot of Email asking about Ft Hood, TX. I haven't been there to try and monitor so I don't know.

I did find TU Electric in Round Rock/Georgetown Primarily on:
938.9000 TU Electric in Georgetown
(936.475,936.5,938.8875,938.9125,938.9375)

There was a site that listed the Bell county Stuff .. do you have that down or what site were you using for it?

John, There may be a 400 MHz system lurking, but last time I was down there I got into a chat with one of the MPs. I got a look at the radio and the antenna is definitely for 900 MHz. I had heard ages ago they were going to a system that would let them communicate with the local communities. hilltop40 John Mayson wrote: > From: John Mayson > > I haven't heard anything about a trunked system up > there. 197. RE: Ft Hood TX Frequencies

Yahoo group: CenTexComm
Date: 2000-01-18 14:18:15 UTC
From: Cheryl
Topic: 193 Message: 197

Hi all. I saw the postings about Fort Hood ? I live here. If you want info for the new Bell County system, go to http://gtrac.ztn.net/ and you can find most of what you need. I?ve been working (obsessively!) on finding and identifying the talk groups for the ?police? related agencies. I just sent Terry an updated list of the ID?s that I feel are 100% correct, so you might want to check his sight again in the coming days. As far as just info for Fort Hood, that?s been difficult. The MP?s etc., will use the Bell Cty. System when the agencies are working together on whatever? Last October I did hear some activity up in the 900 range, but it was rare, and I also haven?t been able to find any info anywhere. I?ve decided that the real deal is that there?s not any work actually going on out there! Let me know if you?d like some of the data I?ve put together.

Cheryl

200. Tx Forest Service, Round Rock and GE Edacs

Yahoo group: CenTexComm
Date: 2000-01-21 18:28:03 UTC
From: Robert Barker
Topic: 200 Message: 200

Dave, here are some more frequencies that are related to Tx Forest service (and that freq range)

159.330 Tx Forest Service Tac 6 Bastrop/LaGrange Relay (151.370)
159.345 Tx Parks and Wildlife Complex Security on Smith School Rd (151.400)
159.360 TX Forest Serv mobile command post - Area 5 (151.190)
159.375 TX Forest Serv Tac 2
159.390 North Shore (Jonestown) Fire (151.190) / Bastrop Med Network (155.940)
159.405 TX Forest Serv Rptr out license?
159.420 TX Forest Serv Base - Area 5 Talk Around
159.435 TX Forest Serv Tac 1
159.450 TX Highway Dept Headquarters 151.385/Tx Frst Serv Tac 4

I think I'm still hearing Round Rock on their talk groups 1648 and 1680. If any talk group is linked to another talk group, they will display another number. So if 1648 is linked to something (patched), then it will display 1651. Good reason to keep the scanner in SEARCH mode.

GE Edacs has been sold. I don't know the details but GE sold it's radio division to another company. This may or may not affect future systems.

159.390 (NorthShore fire-rescue of lake travis (thier formal name) covers jonestown and surrounding areas. they are not part of the texas forest service. the travis co fd's decided to coordinate responses for multi-agency fires. most of the fire chiefs rotate taking crc (county resource coordinator) and coordinate major responses. the forest service task force is part of this plan and responds as directed. they normally use the same fireground channel as the rest of the agencies. (usually 154.280, but might be one of the depts simplex channels). most, if not all, of this coordination is by alphanumeric pagers (at&t). the past few seasons, the forest service has had a task force in teh area for these type responses. they have housed in round rock, afd sta 31 (2222/cap o tx) and a few other fire stations. probably some internal coord on thier channels that robert listed. thanks to robert for the list! chris -----Original Message----- From: Robert Barker [mailto:rbarker@...] Sent: Friday, January 21, 2000 12:28 PM To: CenTexComm@onelist.com Subject: [CenTexComm] Tx Forest Service, Round Rock and GE Edacs From: "Robert Barker" Dave, here are some more frequencies that are related to Tx Forest service (and that freq range) 159.330 Tx Forest Service Tac 6 Bastrop/LaGrange Relay (151.370) 159.345 Tx Parks and Wildlife Complex Security on Smith School Rd (151.400) 159.360 TX Forest Serv mobile command post - Area 5 (151.190) 159.375 TX Forest Serv Tac 2 159.390 North Shore (Jonestown) Fire (151.190) / Bastrop Med Network (155.940) 159.405 TX Forest Serv Rptr out license? 159.420 TX Forest Serv Base - Area 5 Talk Around 159.435 TX Forest Serv Tac 1 159.450 TX Highway Dept Headquarters 151.385/Tx Frst Serv Tac 4 I think I'm still hearing Round Rock on their talk groups 1648 and 1680. From: George Joos
Topic: 203 Message: 203

John and others,

Didn't you know, Round Rock for a city of it's size has the lowest per capita crime in Texas.

But, Round Rock PD has been patching North (1648) and South (1680) Command channels alot more in the past couple of weeks due to a shortage of dispatchers. If you have 1648 and 1680 programmed into scan lists you will then miss the communications (on my BC895 they will then be 1651 and 1683). I am listening now to Round Rock. It is a slow lazy Saturday afternoon but there is traffic on the command channels (unpatched).

I have programmed in and then locked out all the groups I do not want to listen to. Then I leave the radio in search and thus do not miss anything in Round Rock. This method also catches anybody else who patches in (which are generally interesting).

Of course with trunker I see it all anyways.

George

205. Austin Aircraft

Yahoo group: CenTexComm
Date: 2000-02-10 22:36:23 UTC
From: Robert Barker
Topic: 205 Message: 205

The helicopters in Austin use 123.025 and 122.750 for Air to Air chit chat. Possibly also on 123.050 They seem to change a lot.

We have K-Eye News Capt Mike Adrian - K-eye uses 800 Mhz trunked business system We also have the Ch 36 News helicopter that they keep using mostly for
traffic. News 36 is on 450.1125 so don't listen to that freq since it is illegal. Also don't monitor Leslie Gambino from Skywatch Traffic (aircraft) on 455.9625 and 450.9625. But It is legal to monitor Metro traffic on 461.750. They have a plane too I think.

Austin is now catching speeders using an AIRPLANE. Yes that's right. We can't afford a helicopter but we have an airplane to catch speeders with. I don't know if they are leasing it or what but they said on the news that it belonged to APD. This must be grant money because they don't use the plane for anything else. They have markers along I35 and they will call out the speed and between what 2 zones. They are using their normal tac channels for this 460.025 460.500, same frequencies they use for every other special deal like prostitute stings. The news said this was to catch truckers but that's not what I'm hearing.. They are pulling over anyone speeding. They concentrate North around I35 and Grand Avenue Pkwy and South near I35 and Onion Creek.

206. Edward Sector Pursuit - Communications Breakdown

Yahoo group: CenTexComm
Date: 2000-02-16 06:05:35 UTC
From: Robert Barker
Topic: 206 Message: 206

The following is a pursuit that occurred tonight Tues 2/15/00 starting approx 11pm. On Edward Radio. The recap shows another example of the communications breakdown that exists within this county. No matter how trunked the radios go and how fancy they are.. there will still be departments that will not convert and there will still be areas where the radios have deadspots.

Edward Sector got into a pursuit of a 99 (stolen) vehicle..Going North on I35 It turned East on Grand Avenue Pkwy toward Pflugerville.. The Edward unit asks dispatcher to notify Pflugerville PD, TCSO and DPS.

It all went downhill from there.. the Edward units' radios started to crack up. (the repeater is located on a wooden pole on Berkman at a fire station. It's a miracle that it even works that far at all) The dispatcher can only notify one agency at a time. Even with a communications supervisor hopefully calling another agency, it's difficult to relay info that keeps changing every second. This would have been an EXCELLENT opportunity to have simulcast the pursuit on 155.370 INTERCITY so all the above agencies who are on VHF High Band would have heard it. But no! Everyone was getting different info and there was no coordination at all. Edward units either (1)couldn't get out on their repeater, or (2)were all taking at once or (3)didn't know what street they were on. They lost the suspect vehicle. Pflugerville was only getting spotty info from APD being relayed by dispatchers on phone lines. The vehicle was finally found by Pflugerville to be abandoned. Obviously the driver bailed. We had cars from all agencies going in all different directions. Every agency calling for their own K9. Probably the dispatchers hung up at that point. Finally an APD and a Pflugerville officer roll down windows and lets APD know the location of the vehicle. Then there is spotty info of APD trying to give a description of the driver to Pflugerville and TCSO.. Then TCSO spots the suspect on foot running.. but only one TCSO unit and he is too busy to get on the radio with the other units.. Still 3 agencies trying to communicate by phone.. not working.. mixed up information. By the time APD gets the suspect's location, he's already ran 3 streets over. Relaying though dispatchers seriously delays getting help to the officers. The APD dispatcher doesn't seem to have a Mapsco. He cannot pronounce the name of the streets correctly and everyone is mixed up since all the streets have similar names. Finally they get one officer from each agency to meet at the vehicle and they all hold up their Handhelds for everyone to hear and relay the info between the agencies.. TCSO looses the suspect. It shouldn't have to be this way.. This is what the dispatchers should be for. A link between 460.325 and 155.370 would have certainly helped!. All you would have to do it let the VHF agencies know to monitor intercity. Then APD communications needs a scanner to be able to monitor Pflugerville and TCSO and DPS.

26 minutes later and the APD dispatcher has managed to find a Mapsco but still cannot pronounce the streets. All the K9's are starting to arrive but still everyone is going in different directions. Each dept has their sergeants showing up and their own set of K9's. Each agency is doing something different.. it's like a competition on who will find him first but none of them are working together since they cannot communicate with each other. And they are not having much luck. Too much precious time has gone by. It's a comedy. APD gives out directions and they are repeated by TCSO about 20 seconds later. It might be better if the dispatchers could just turn up their radios and lay the phone of the agencies next to the radio and let them just listen to the radio in the background. I'd imagine the APD dispatcher is wearing a headset however so that most likely isn't happening. If he was talking to Pflugerville PD then he might be able to pronounce the streets better for the officers.

I'm here listening to all this using a separate scanner locked on each agency. I could call any one of these agencies and put the phone up to my scanner so they could hear the radio directly and get the info out quicker. But since they do not know me, they would probably not even give me the time of day and would just see me as interfering. I don't think anyone got time to even call DPS for their help.

31 minutes later and it appears the scene is now cold. No sign of the suspect. No helicopter available (they keep the plane to catch speeders, not car thieves), no Lieutenant with an infrared FLIR camera.

43 Minutes later and all agencies are pretty much at a Code 4 - unable to locate suspect.

Even if APD goes to Trunked radios and TCSO is on the same system. I doubt Pflugerville PD or maybe even DPS would have the same radios. You cannot just expect a "Public Safety 1" talkgroup like the one used by Williamson County's trunked system, to allow all agencies to communicate directly. What gets me the most.... is that APD has intercity at their disposal and they can and could have used it. All the county agencies have 155.370 frequency in their vehicles. But they might not if everyone goes trunked. There is an intersystem coordination frequency in place, it just isn't being used. If they aren't using it, what makes anyone think they will use a common talk group. I think it will all get worse before it gets better. Makes for interesting, but very frustrating listening.

I feel helpless that I feel like I COULD do something to help relay, yet I can't.

208. Situation in Lago Vista

Yahoo group: CenTexComm
Date: 2000-02-16 16:00:49 UTC
From: Robert Barker
Topic: 208 Message: 208

There is a situation brewing in Lago Vista. Apparently a student showed up to school with guns and the chase is on. He managed to get away and they have no idea where he at. They are assuming he is on foot somewhere in the city.

158.850 Lago Vista PD, Travis County is assisting. APD K-9 has been called and is just now arriving, DPS helicopter is also in the area and is enroute.

Lago is trying to scrounge up some radios to give to these other agencies.

Parents got word and are showing up at the school to get their kids out, even though the best protection is at the school. They have police at all the doors and have the doors locked. Both high school and middle school.

My mom said she even heard Parks and Wildlife on the search but I haven't heard them.

They think he may have gotten on board a school bus that may have gone on another route.. Problem is that the busses do not have radios or cell phones.

I'm sure they will at least be talking on 154.950 intercity. Should hear the DPS helicopter from anywhere. Other possible freqs are 155.310 and 155.07 for TCSO.
*****

Also wanted to mention that http://www.incidentpage.com
is a service that will send out pages either to your Email or alphanumeric pager of incidents in cities including Austin/Travis County. But they rely on people like me to send the pages and I'm not always around. I don't get paid for this and I don't get anything if anyone signs up.
Just wanted to let everyone know as it's worth checking out. Your first city is free and they would charge for additional areas such as Houston or DFW. San Antonio is included with the Austin Group.

209. Re: Digest Number 94

Yahoo group: CenTexComm

From: George Joos
Topic: 209 Message: 209

John,

TG 1872 is Round Rock PD. It is Special Operations (or SpecOps). This is generally used by S.W.A.T. or any other special operiations (read "high risk" or stakeout).

RRPD has been active lately on there. The other week SWAT was out for a shooting down at the apartment complex down south. SWAT was using SpecOps while the rest of the officers were on TAC3.

As far as the multiple units at a scene. When ever RRFD dispatches a medical call they routinely path the EMS Scene channel with the appropriate Fire TAC channel so the engine company can talk to the EMS unit. Lately there has been a lot more of patching in a PD TAC channel with the Fire TAC, especially at major incidents. There was a fire in my neighborhood this week (luckily no one hurt), but FD and PD were all patched together so they could coordinate their efforts.

In the past there has been some good examples of using trunking (the man hunts last year in eastern RR by 1460) where Georgetown, Round Rock, County, and even DPS were patched together. You also get EMS dispatch patching in StarFlight to a EMS scene/FD TAC channel (StarFlight uses VHF radio). However there can be some bad examples also. A lot of it depends on the skill of the dispatchers and the officers knowledge of the radio system.

George

Subject: [CenTexComm] Round Rock

> You also get EMS dispatch patching in StarFlight to a EMS scene/FD TAC
> channel (StarFlight uses VHF radio).

STARFlight has wolfsburg radios (one vhf and one uhf - or one dual band) that has some memory channels and the ability to program on the fly (no pun intended). i think thier memory is 50 channels if memory serves me. they have most of the area pd/fd/ems channels pre-programmed as they serve the 10 county central texas area. (this information re: radios is for the old helos; the 412, 206b and the l model-not sure what they have now, but imagine it's the same. i know they are still just uhf/vhf)

just some misc info, STARFlight is owned and maintained by travis county emergency services. the pilots and maintanence guys are travis county employees. the crew configuration was a pilot, a seton (brack) nurse and an austin ems paramedic (both rn and emtp were trained and cleared to flight crew status vs. just grabbing someone out of the er or ambulance). a while back, the rn's decided to pull out of the program and STARFlight has been flying with a pilot and 2 ausitn ems paramedics. recently (last week??) they held hiring interviews for rn's to bring the crew back to pilot/rn/emt-p. i think those rn's are going to be travis county employees. the emt-p's and rn's are all rescue trained.

austin ems provides the emt-p's, all soft goods and dispatch service. look for less and less in-travis county responses as austin ems puts more units on line (supposed to double the system within 3 years or so starting in 1999).

i know-long winded, but thought u might be interested, chris

213. Willaimson County Radio System up and down

Williams Arrested On Traffic Violation

A traffic ticket ended up putting Ricky Williams in the Austin city jail. The Heisman Trophy-winning UT alumnus' scared-straight experience came Monday night. Ricky's mother, Sandy Williams, says she heard the whole thing during a cellular phone call. She says Ricky was stopped for not signaling for a lane change, but her son refused to sign the ticket and he was arrested. The New Orleans Saints rookie was released about two hours later. Williams' attorney says he's incensed by what he called the ``absolutely terrible judgment'' used by DPS Capitol police. Williams is in Austin taking classes at UT.

Chris is correct about the ticket. All traffic offenses are arrestable in Texas. What you are doing when you sign the ticket is giving your bond (or word) that you will appear in court. The officer then is allowed to release you with that bond. You are not showing guilt by signing nor are you showing that you are innocent by not signing the ticket (just getting a trip to jail, do not pass go, do not collect $200).

In all the times I have ridden with officers here in Round Rock I don't recall seeing or even hearing about someone refusing to sign. I am sure it has happened, but it is not an everyday occurence.

George

220. More on Austin's New Radio System

Yahoo group: CenTexComm
Date: 2000-03-04 06:36:33 UTC
From: Robert Barker
Topic: 220 Message: 220

This weeks Austin Chronicle gives an update on the continuing radio saga:
http://www.auschron.com/issues/dispatch/2000-03-03/pols_naked7.html

Original article is at:
http://www.auschron.com/issues/dispatch/1999-12-10/pols_feature3.html

Since the Chronicle first reported in December on the long and sluggish quest to secure a new public safety radio system for the city, the seven-year-old project is finally crackling with some new life.

The biggest change has been in project management -- former Austin Police Dept. officer Pete Collins is now at the project's helm, replacing Kenny Williams of APD and Danny Hobby of the city of Austin's Information Systems Dept. Williams and Hobby had been managing the project since they came up with the idea for it in 1985. Williams was reassigned in December, and Hobby is retiring from city employ after 20 years.

Unfortunately, the changes haven't done much to speed up the process. The timeline for the project's implementation has been pushed back once again, and now it looks as if the system won't be up and running before December 2001. While the technical evaluation of the two vendor proposals is complete and the financial evaluation has started -- Collins expects that this portion will be completed within the next two weeks -- a recommendation to the city still isn't expected until the end of the summer. The last timeline called for a recommendation to be made by April.

In part, the delay is a result of the buyout of the radio division of potential vendor Ericsson Inc. by Comnet, a Pittsburgh-based cell phone company. The financial evaluations can't be completed until Ericsson's new partnership is finalized. The other vendor competing for the nearly $70 million project, which seeks to create a trunked radio system not only for Austin but for all of Travis County, is Motorola CE.

Despite the delay, optimism has remained high at the radio project's new offices at the former Robert Mueller Airport. Assistant Police Chief Bruce Mills -- who was appointed by Chief Stan Knee in December to oversee all of APD's capital projects (replacing Williams, who was previously the department's sole link to the radio project) -- was all smiles when asked about his faith in the project with Collins at the helm. "He's great, just great," Mills said of Collins.

Unlike the former project managers, Collins is candid when relating both the positive and negative aspects of the project, which some say is a refreshing change from Williams and Hobby's insistence that everything was always okay. "You have to report the good with the bad," Collins said. "If something goes wrong it's not because you're incompetent, and you have to get past the human reaction of getting defensive."

Indeed, Collins' honesty about the project's continued delays has helped quiet the concerns of local public safety officers, some of whom felt their needs were being undermined under previous management. "We're still behind the curve," said one officer. "But people are aware of it at this point, and they are reassessing their timelines. The people gathered up now are really committed to getting this thing going. It has redirected everything."

m23 is the "manor" unit, stationed at afd station 41, 11205 Harris Branch Pkwy. support 1 is not on duty all the time nowdays, only when staffing has an extra medic. if someone goes home sick or whatever on a medic/rescue unit, they will put support 1 out-of-service to send that medic to the unit that someone went home from. support 1 isn't really based from anywhere, the unit itself, sits at ems hq (rbj-15 waller), whennot in service/use. the crew usually spends the night at ems05 (koenig/lamar) or somewhere else more or less central to the city. the entire county is thier district and they are able to roam , pretty much, where ever they want. more play time to work that truck than any other as you get to go all over the place!
hope that helps, chris

If you really are serious, I'll try and find what I've got, going back 20 - 25 years! Now you talk of stuff out of date! I have to get Robert Barker to up date me! Back in the early 70's, about 74 or 75 or thereabouts, Austin had three PD channels, 155.550, 155.610, and 155.070 for simplex tac. Virtually every SD in the state was on Low Band, either 37.18 or 37.26. Federal money came available through LEAA grants, and when the money did come in, the money and new equipment was allocated by "Planning Councels" -- ie: CAPCO is Capitol Area Planning Council, and has 10 (I think) county members. Consequently when you look at the Call Signs used, many in one area - ie: CAPCO -- are all in series (SD's and PD's). I built a while bunch of work books based on these Area Planning Councels (24 in the state), although probably not always exactly up to date or exactly correct, but lots of stuff (very old stuff) --- Say the magic words "fools rush in", and/or "I volunteer" and I'll start forewarding you some stuff. By the way, this one list site has a FILES or whatever program, how much of this stuff can we pot in there?

236. Frequency Lists for Austin

Yahoo group: CenTexComm
Date: 2000-03-30 16:45:15 UTC
From: Robert Barker
Topic: 236 Message: 236

I will repost my frequency lists on here as much as you guys want me too. I'm not that computer literate to get a website going. Besides, I update my list weekly as things are always changing.

I don't mind sharing info with anyone. But, I just hate that people will take stuff that I have found and put it on their own list.. and not give me credit for it.

For instance, I have done a lot of work on the LCRA system. I don't mind posting all the towers, frequencies and talk groups but I don't want someone else to reproduce that list with their name on it and act like they did all the work and get noted for it.

Wes does an excellent job collecting station locations, apparatus information and he deserves credit for all that. So I try and give credit where credit is due. So if you have a burning desire to know what AFD stations have tanker trucks, He's your man.

Let me know if you want the lists posted again or if anyone wants them Emailed to them privately, I can do that too. I have been trying to "dispatch" major calls in Austin/Travis County through www.incidentpage.com This is a free service (for your first city) that sends you a page or an Email of events going on. I encourage everyone to join and become a dispatcher if you can so we can keep a network going of all the events in Austin. Dispatchers are not paid for this.. It's strictly volunteer.

Last night's fire at Mason Manor Apartments was quite a big deal. It went to at least 3 alarms.
and we have sure had a rash of bank robberies and homicides lately. I don't know what is going on.

123.45 has been used a lot by all the Traffic Helicopters: Capt Mike w/KEYE and Chopper 36 and Leslie Gambino with Skywatch Traffic.

APD seems to have suddenly stopped using their airplane. I heard unconfirmed reports that the tickets were being contested and mostly dismissed. Sounds like they didn't plan it out quite well. The media kept saying they were using it against truckers but from what I heard on APD Ch 8 460.500 they were pulling over anything and everything.

I don't know if everyone read the latest Starflight/Critical Air article in the Statesman. Seems Brackenridge just didn't realize how expensive it would be to run a helicopter program and are having second thoughts about what to do. They can't figure out where to put the crew when they are at Brack because the "quarters" that the Starflight crew uses would still be used by Rescue 3 or whatever unit that is at Brack. I still think that the obvious solution would be for Austin EMS to staff BOTH helicopters at

all times. Although they have Starflight 1 and Starflight 2, only one helicopter is available at a given time (except on extremely rare occasions) This is the entire problem. Brackenridge(Seton) was upset because Starflight is never available for transfers since they will cancel at any time for a working Emergency Incident. Lago Vista requested Starflight Monday to help search for a Bank Robbery suspect and they were unable to assist them due to other calls they were working.

From: Chris Howell
Topic: 236 Message: 239

sorry for the late reply, i had a computer crash (thanks microsoft!)

i vote for any web site that makes all the information easy to access.
also, credit needs to be given where credit is due.

austin ems doesn't put 2 helos on duty norm because the helos, pilots, hangers, mechanics and expense of flying is not thiers. travis county owns all that and makes the call. seton was asked before these helos were bought if they wanted to go in on a third helo that would be manned 24/7. seton declined. that is rescue 3 at brack, thier new station is being built across hosp drive from thier existing station. the critical air crew is going to move into r3 station when finished moving.

From: Robert Barker
Topic: 243 Message: 243

I am still here.. Whoever needs my frequency list..just ask or I can post it again.

Right now Wednesday at noon .. I am monitoring a large protest by AISD students around Northwestern down 7th.. they said they are going to the Governor's Mansion but they have a long walk. AISD 460.875 Charlie Radio 460.175 And Statesman are talking about it 452.975

I am updating it on www.incidentpage.com

The Statesman said the cops are roughing up the kids a lot.. slamming them up against cars. etc. But the students are not following officers orders. I'd imagine there is a camera or two out there recording the whole event so we will be hearing at this for awhile.

AISD is giving out tickets for Curfew Violations and inciting Riots.

245. Austin TX/Waco TX DPS

Yahoo group: CenTexComm
Date: 2000-04-07 22:42:07 UTC
From: Robert Barker
Topic: 245 Message: 245

I was visiting with Austin Texas DPS and was told that they are planning on having 2 Dispatchers. One for North and One for South.. They said Waco Already has 2 dispatchers. Just curious to know what frequencies they use .. if it's 2 frequencies or just 2 dispatchers on the same frequency?

I suspect one is on 155.46 and the 2nd is on 155.445, but we can't do that in Austin because Capitol Police is on 155.445.

****
Here are some other Notes for DPS Austin District Office:

The Office is located at 9000 N IH 35. just south of Rundberg. Just look for a big antenna in the sky.

Although not exact this is a breakdown of the Austin area units:
The 3rd digit indicates region or area you work:

6210-6219 East of I35
6220-6229 SW Austin West of I35 South of River
6232-6239 Williamson County Units
6450-6459 Bastrop/Burleson/Lee counties
6260-6269 San Marcos/Hays County
6290-6299 NW Austin West of I35 North of River
6640 L & W
6670 L & W
Rangers: 840 841 842 907 980 984
Fugitive 7700's
Narcotics 8600's
Special Crimes 7710

Ch 1 Primary Austin 155.46 (KKD 303)
Ch 2 Car to Car on 155.460 (Dispatcher can't hear)
Ch 5 Special Operations 155.505/ Ch 6 is same frequency direct
Ch 8 Capitol Command Post 155.445 (they are over state buildings in the city) *
Ch 11 New Braunfels Repeater 159.210
Ch 12 Paleface Repeater - they said most of the troopers don't even know about it. 159.210
Ch 18 159.090 Special Operations
Ch 32 155.475 Nationwide
* The actual Capitol DPS officers on are 460.125 I have no idea why they chose UHF
They also had Ch 8 Listed on the console in 2 places.??????????????????????

They can monitor/Transmit on DPS Capitol 155.445 Labeled Ch 8
They can monitor/Transmit on Intercity. I assume 155.37 (Ch 4) , not sure about

monitoring 154.950 (Ch 3)
On the back wall (beside the shotgun) is a "Marine Radio" but he said it was an HF radio. It was off but they test it once a month with other DPS stations Callsign WPAH460

I found a scanner but it's at the end of the console..turned facing away from you.. and it is preprogrammed and I guess they don't touch it or mess with it. They do have it hooked to "the antenna" so reception is wonderful. They have a midland programmable radio beside the scanner but it stays off and don't know if they even know how to work it.

Usually just after midnight. All troopers go off duty (10-42) So the dispatcher is alone.
(now you know why there is a shotgun on the back wall)
They take a lot of phone calls 90% from other agencies asking how to do something on the computer or If they can run certain checks. They also call for another search which is considered a manual lookup, but done on a computer also. I think it's another database that noone else has.

There is a phone on the wall that is a link.. it's actually like an intercom to all DPS offices and all weather stations in the state. If a tornado is sited.. they get on the phone and make an announcement. I guess it's mainly for weather. You can hit the button and you will be talking to all DPS Dispatchers in the state at the same time.

246. RE: [CenTexComm] Austin TX/Waco TX DPS

Yahoo group: CenTexComm
Date: 2000-04-07 23:46:54 UTC
From: R Clark
Topic: 246 Message: 246

The two dispatchers at Waco DPS operate on multiple frequencies. The DPS communications facility in Waco covers McLennan County as well as Hill, Bosque, Limestone, Freestone, Johnson, and Ellis counties. To cover the area DPS maintains 2 simplex pairs that operate on a remote base arrangement. The console is at DPS in Lacy-Lakeview but the base station transmitter is remotely liked by microwave to the tower site in Ross. In addition DPS has a VHF repeater in Eastern Freestone county and I believe one in Ellis county.

Although you will hear TLE (traffic law enforcement) units checking into DPS Waco, most of the troopers in outlying counties will work traffic on the County SO frequency. CLE units (criminal law enforcement-like narcotics, auto theft or the rangers) usually operate on the local SO frequency, but occasionally you may hear them on a designated CLE frequency (like 155.505) or even the TLE frequencies when that's the only way to do business.

Find me at "AskMe.com" where you can ask questions and get answers for anything under the sun.

Topic: 248 Message: 248

Chris,

I haven't seen either of these groups before. I have had trunker up
and running for
a while and haven't logged any groups around those either. Sometimes I
leave
it running all day just to see what I pick up (just have to make sure
the little one
doesn't find the cables and/or keyboard to disturb it).

FYI 18035 is not evenly divisible by 16 so that would not be a group.
It probably
was 18032 crosspatched to another group (+3 is crosspatch).

18032 and 9840 are both odd groups which would fit into this system.

George

249. Williamson County Trunked System

Yahoo group: CenTexComm
Date: 2000-04-08 20:49:38 UTC
From: Frank E Jacks, Jr.
Topic: 249 Message: 249

I'm a relatively new scanner ethusiast from the northwest Austin area, living in Williamson County. I am also a brand new subscriber to this group, so excuse me for my ignorance on this matter. I have a Radio Shack Pro-75 scanner (no 800mhz capabilities). Is there any other way for me to monitor Williamson County Sherrif frequencies? Is there possibly another agency around the area that rebroadcasts the Sherrif's radios? Is this even possible?

Thanks in advance for any help!!!

250. Re: [CenTexComm] Williamson County Trunked System

Yahoo group: CenTexComm
Date: 2000-04-08 21:05:14 UTC
From: Robert Barker
Topic: 250 Message: 250

Hello Frank and Welcome to Austin Area Monitoring

Williamson County is on an 800 Mhz Trunked Radio System. The only REAL way to monitor this agency is with a Trunktracker type scanner. The most popular radio is the Uniden BC245XLT www.uniden.com has them from time to time Refubirshed for about $190

Otherwise they are about $230 from dealers

Radio Shack does have 3 radios that do Trunktracking but I've heard more bad comments about them than good.

Williamson County uses these freqs: 856.9625, 857.9625, 858.9625, 859.9625, 860.9625, 854.9875, 856.9875, 857.9875, 858.9875, 859.9875, 860.9875

You can monitor them with any scanner that gets this band but since the conversations are "trunking" amoung the frequencies, your radio will not automatically follow the conversations. So be ready to hit the scan butten after every transmission and remove any delays.

There is another way you can monitor them and that is to listen to the input frequencies for all the above frequencies. Inputs on 800 Mhz are 45 Mhz below the outputs. So you'd be listening to: 811.9625, 812.9625, 813.9625, 814.9625, 815.9625, 809.9875, 811.9875, 812.9875, 813.9875, 814.9875, 815.9875.

When monitoring inputs, realize that they must be very close for you to hear them. This would be a good way of leaving the radio on and you would only hear units that are close in your neighborhood.

462.975 is still used by Williamson County EMS for EMS paging.. however most of the 2-way traffic is on the 800 Mhz frequencies.
158.865 is used by some of the outlaying fire depts, etc and is rebroadcast on the 800 Mhz system if they need it to be done. or they can rebroadcast any talk group onto this frequency.
Major agencies using the Williamson County system are. Williamson County SO, EMS, Round Rock police and fire and Georgetown Police and fire. It also includes all the county road crews, municipal departments, etc.

I would gladly give you a demonstration of how well the Trunktracker works. Just let me know if you are interested.

I also try to send out alphanumeric pages (or Emails) for major incidents. I do that through a website called www.incidentpage.com if you are intersted in checking it out. .it is FREE! for the first area you want to be notified about. and Austin/San Antonio is considered one area. You can choose only to be notified about certain specific events, in certain cities

or counties and you pick the times of day that you want pages and times that you do not want pages.

258. Williamson co trunk info using Trunker

Yahoo group: CenTexComm
Date: 2000-04-11 11:18:16 UTC
From: Robert Barker
Topic: 258 Message: 258

Chris, I'm very interested in seeing what data the Trunker is spitting out for the Williamson County system. I'm first interested in exactly what frequencies are part of the system. What the correct frequency order is?

Then the talkgroups are important. This program doesn't provide any sort of label for those talk groups does it? Just a number. I know there may be many groups.. but if you listen with your trunktracker, you will hear only the major groups that we all hear. Perhaps those other ones are "private" chats .. or other times when certain talk groups are paired with others or linked.

After you get data on that one: Try the City of Austin's Water/Wastewater System on 856-860.2625 and 856-860.4375

And after that, Keye is on a business trunked system and I'd love to decode that one.

I still have not found News 8 Austin crews. They may be on digital Nextel Radios

On the LCRA System this weekend, they announced that "Ranger West" would be paired with "Loaner One" for the rodeo this past weekend. They also said that those rangers will be monitoring Ranger Admin all weekend. I'm sure the linking of frequenies presents with new talk group data. Stuff that comes and goes.

Chris,

I have been running trunker since last summer on the Williamson County system.
I am currently up to 151 Groups, 2036 Radios (some of which may not be active anymore), and 33 patches. If you want to, you could send me your group, ids, and patch files and I will try to
smartly merge them with mine, and send them back. I have alot of groups identified, but there
are many that are not. Though most of these unidentified groups belong to some sort of Public
Works or special public safety groups that are used very infrequently.

276. Asking for feedback on www.incidentpage.net pages

Yahoo group: CenTexComm
Date: 2000-04-26 04:21:37 UTC
From: Robert Barker
Topic: 276 Message: 276

John, Chris or anyone else.. If you give me credit on any lists.. Please do list my name and Email address as that is how I'd prefer to be contacted if they are getting the list off the net.
I also don't mind my phone number being listed if you want to but Email is probably best.

I wanted to ask if anyone or how many are subscribing to the
www.incidentpage.net
website. I notice that Chris and I have been the only one sending out pages for the Austin area. For those that don't know.. this website allows you to get either Email or Pages of incidents that are occurring in this (or any other area).. They rely on the pages from their dispatchers (Me and Chris), so that's why I welcome the feedback. Also if you subscribe to one area.. it's free.

I am not always home, so I try to send out pages when I can. What I'd like is some feedback on if subscribers would prefer one page per incident or if they'd prefer several updates as to how it ended. For instance, they had a SWAT callout the other day which I paged out and I got a few Emails asking how it ended. Is that something you would like to have me page out. An update on the situation or and update on the call. Chris Howell does and excellent job of updating the calls like he did with the MVA collision off Anderson Mill this weekend or the grass fire off FM 1431 near Lago Vista a few weeks ago.. but the reason I'm asking is because of the feedback that I'm reading in the IPN Dispatcher's Email group. They read:

"Actually, one of the things I hear most often from people who use other services is they like the fact that we don't send out 20 pages for a one-alarm fire. Less is definitely more. We're not in this to compete with other firepage services in quantity, rather to provide a much higher quality service."

also:
"It is my understanding that the IPN network is to let people know what is happening so they can turn on their radios and listen. I think we are sending out way to many messages on single incidents"

Feel free to email me here or privately with your comments. Also would you like other incidents paged out?.. such as the drilll that I paged today.. Is that appropriate or do you think it is not appropriate. My thought is that anything that generates interesting scanner traffic should be paged out.

Interesting scanner traffic tonight..

Apparently the police on 460.275 are after someone who has jumped into Town Lake..

They are very frustrated that he's in the water.. They have launched starflight to use the Heat Sensor (FLIR) to try and find them. They have K-9 there etc.

I think it's funny that the fire dept dive team is on 453.775 with their boats.

PD is on their channel and they can't link up.

Also for some crazy reason Starflight is saying they do not have Ch 8 Citywide 460.500 they have had it before.. I don't know why they don't have it tonight but perhaps it's broken.

So we have Starflight on the main David Radio Channel 460.275 tying up that freq for this one call.. I hope the guy committed a major enough crime to justify all the jet fuel they are spending circling Town Lake.

Perhaps one day .. all 3 agencies will able to get on the same channel to coordinate their activities.. but I don't think the police will ever share a freq or talkgroup with the fire and EMS people. Not even for a single event..they would be telling each other to shut up since they think their radio traffic is the most important.

Unrelated (or possibly related) was a gun found at the Loop 360 Pennybacker Bridge. They are returning tomorrow to dive for more souveniers. Don't know what that's about.

288. Bank Robbery Today

Yahoo group: CenTexComm
Date: 2000-05-17 15:09:31 UTC
From: Robert Barker
Topic: 288 Message: 288

Very Interesting Listening today. The Public Employees Credit Union at 1200 W 42nd St was robbed this morning. They gave him 4 money "rat" (Transmitter Packs) . A witness got the License Plate and Color of Vehicle. Starflight launched and went straight to the signal and was on the car in minutes, going Straight up I/35. Without Starflight's help, I don't think they would have got him that quickly. They started the pursuit around Wells Branch and about Grand Avenue he was tossing the money (evidence) out of the car. What a sight that must have been.
He went down Hwy 79 in Round Rock and pulled into the VFW Park behind the police station and then a foot pursuit. They got in the park. This was an Excellent job by all involved and particularly with Starflight's quick response and their coming up on Ch 8 (which didn't seem to work last week when they chased a suspect into Town Lake). Also great job getting Round Rock on the phone and letting them know. Not sure if Round Rock was monitoring by phone or by scanner but It work.

I tried to keep the updates going on www.incidentpage.com as best as I could. Again this was a lot of pages and I'm sorry for that but I figured it was interesting enough to keep paging. Here is a summary of the pages that I sent. This is FREE and will go to either an alpha pager or to your Email. I suggest you check it out.

290. Austin EMS update

Yahoo group: CenTexComm
Date: 2000-05-26 17:09:05 UTC
From: ExLngHrn@aol.com
Topic: 290 Message: 290

Well, AEMS has moved 2 units
Medic 9 moved from AFD station 34 to 15516 General Williamson in the Hudson Bend area.
Rescue 16 moved from General Williamson to AFD Station 39 at River Place (near 2222 and 620)

Also, Medic 24 seems to be on the radio at times. This truck may eventually move to the southeast Travis County area.

Finally, Support 1 will be staffed full-time from June 1 until October 1 due to increased rescue needs (i.e. the lakes) and the increased fire danger.

Hope this helps out,
Wes

291. Austin PD gets LoJack

Yahoo group: CenTexComm
Date: 2000-05-27 03:12:16 UTC
From: Robert Barker
Topic: 291 Message: 291

64 Austin Police Cars will be equipped with the LoJack Stolen Vehicle Recovery System within the next month.

The LoJack system is for car owners who elect to purchase this product for their vehicles. When a LoJack equipped car is stolen. Transmitters in that city will send a signal to the vehicle and have it to begin transmitting a homing signal. This signal will be received by the equipped police cars (hopefully) LoJack is easy to spot on a police car as they have 4 18" antennas on the roof arranged in a square pattern. The police cars will head toward the direction of the signal and locate the stolen vehicle. LoJack transmits around 173.xxx Mhz.

This is similar to the ProNet Tracking which APD already has. Expect that the ProNet tracking involves tracking bags of money that is taken from Banks, Grocery Stores, etc. The ProNet tracking involves 3 shorter antennas mounted in a triangle pattern on the roofs of the patrol cars.

Wow, it's gonna be a sight to see if they put both on one car. That's 7 antennas right there and doesn't even include the UHF 460's Mhz antenna or the 800 Mhz MDT antenna (or fin or disk as they have been using lately)

Seems like a lot of money being spent. Has anyone heard any officers on traffic stops using their remote low power microphones with their dash mounted cameras?. Search around 166, 169, 171 Mhz.

*****

Today we had another Bank Robbery. The Wells Fargo at Braker and I35. I've lost count but I can say this is the most I have ever seen in Austin. They seem to be happening between 2-6pm and are usually major banks right new major highways. The efforts to capture the suspects are partly due to slow K9 Response, old or broken RAT transmitters (batteries have not been changed), APD's anti-pursuit policy and a host of other things.

Sounds like we need a ** police helicopter **. (The airplane has not been used since the first month,, the speeding tickets were being contested in court; the aircraft was obtained through seizure)

I think the FBI is not liking what's going on and I suspect much more FBI activity in the next few days. Pass any FBI traffic my way.

m09/r16 moved in jan/feb. there might be a unit moving back into afd sta 34, but not for a while (years??).

m24 comes online as a fulltime unit june 1. it will be running out of afd sta 35 (burleson rd) until a station in setco (SouthEast Travis County FD) is built.

more units are due in jonestown, mopac/enfield area, manchaca, pedernales and more, but unsure on timeline.

look for more helo coordination on one of the ems channels as critical air moves into the brack helopad. ems comm is going to coordinate the pad and incoming/outgoing aircraft (as it relates to clearing the helopad, etc)

chris

Chris,
Are they going to be coordinating on the UHF EMS frequencies currently used? Or something else?
Speaking of EMS radios, is TAC-1 still being used?

Thanks again,
Wes

not sure which freq, was some talk of aviation freqs, but comm does not have any radios up there like that.

tac 1 is still alive and well, just not used much at all. it's in all the units and in comm, but not monitored due to montgomery county. but, it works great for simplex stuff that takes too long to use the mdt for or not business enough for ch 1, 2 or 3. last time i used it was to talk witha supervisor on where she wanted to meet us at.

297. Austin EMS Channels

Yahoo group: CenTexComm
Date: 2000-05-27 09:38:41 UTC
From: Robert Barker
Topic: 297 Message: 297

Austin EMS
1 462.975 Primary
2 462.950 Secondary and On-scene Coordination
3 453.500 Fire/Med or Firecom 3 to coordinate with AFD,

This 3rd channel is non-stop traffic and EMS is looking to get something else but it will take an act of congress to achieve this. Personally I think they could easily program in all the other AFD Firecom Channels since they have plenty. They may already have this but it's not official.

Also EMS does from time to time use other UHF Med frequencies for talking. I have personally heard Starflight talking to a supervisor on a Med channel like 463.150 during demonstrations, etc.
I last heard it used in Georgetown at a Law Enforcement day they were having about a year ago.

The Air to Air Frequency is and continues to be 123.450. This is a common CB chit chat type frequency to allow all aircraft to talk to each other.. They Do talk about the calls they are on such as the Bank Robbery they had the other day where KEYE's Capt Mike, Ch 36's Chopper, DPS and Starflight were all talking. I sent this page out on www.incidentpage.com giving the frequency to remind everyone about it. This is very active during rush hour or when an incident is going on.

Tac 1 155.325 is their best kept secret. They keep officially saying they are no longer using it and I honestly haven't heard them using it in quite a while but Don't remove it from your scanner.
They used to do VHF paging on it for units out off 183 Where the UHF did not penetrate since Austin EMS got on the same FREQ as Williamson County 462.975. For the record, WC says they were there first. Some Frequency Coordinator. I think 155.325 should be used between the Starflight pilot and crew to tell him if he needs to shut down or keep the aircraft running.

Another thing that shocks me is that the ambulances still have to manually dial in the hospital on 155.340 each an every time they transport. These seems like such an old way of doing things.
Williamson county has different talk groups for each hospital and Austin could have a different hospital on each med channel. There are plenty of med channels available. It used to be that dispatching was supposed to take place on 462.95 or 462.975 and that the 463.100, 463.050, 463.075. 463.100, 463.125, 463.150 and 463.175 were supposed to be simplex only, but I have heard other agencies make these full repeaters. Even Marble Falls is doing this with a repeater on 463.150 for EMS crews to coordinate on. I'm surprised they are not just using Cell Phones for this and billing the patient for the call.

EMS could cut down on their radio traffic tremendously but they choose not to. Most commands are available via MDT yet they are still verbally announcing onscenes and moves and inservices. The loud paging is also a thing of the past. I have never seen an EMS crew without a radio turned on so I don't see the need for a voice pager unless the crew fails to answer their radio. This is pretty old technology. You could Alpha page the entire crew with whatever message you want using FLEX technology (on a different frequency hopefully, 155.325?) which would be a quick buzz over the radio and would not be the DOOO-DOOOO hehaw, hehaw, hehaw type noises that you hear all the time. It can take almost a minute to set off some of those older tone pagers.. Seconds Count when it comes to saving lives. EMS says they don't choose to set off the pagers.. It's just how their radios are programmed. So when a Supervisor like Unit 50 says send me Medic 3's call.. you will hear .. Dooo Dooo, hehaw hehaw, hehaw
Uh, no need for that..

298. Austin Scanning

Yahoo group: CenTexComm

From: Frank E Jacks, Jr.
Topic: 298 Message: 298

Since I'm still relatively new to scanning (especially trunked systems) I need some help. I was thinking about buying one of the scanners that Radio Shack has on sale. The Pro-91 is on sale for $179.99. It will scan Motorola I, II, I/II trunked systems. Is this sufficient for what Williamson County now uses, and will it be sufficient for what Austin is shifting to in the next few years?

Thanks
Frank Jacks, Jr.
Austin, Texas
183/620 Area

From: ExLngHrn@aol.com
Topic: 299 Message: 299

Williamson County uses a Motorola Type II system, which will be fine with the Pro-91. However, the 91 will not scan trunked and conventional at the same time.

My understanding is that the Austin system will be digital. Currently, no scanner will do digital.

Hope this helps,
Wes

From: Robert Barker
Topic: 299 Message: 304

Well I will take a stand and say that I do NOT recommend the cheaper version of the Trunktracker. I do not think it receives as well and it will not let you monitor both trunked and Conventional systems at the same time. Capacity is limited..but if that is all you can afford, then ok.. but if you can afford $199 then get the BC245XLT.

Try www.uniden.com for refurbished ones or try www.leeselect.com

307. Austin Park Police Officer Shooting

Yahoo group: CenTexComm
Date: 2000-05-29 01:47:05 UTC
From: Robert Barker
Topic: 307 Message: 307

At 3:22pm today (Sunday, May 28th) Park 22, officer William Jones went out on a Traffic Stop at Robert E Lee and Barton Springs. I am told this was on Robert E Lee in front of the Umlauf Sculpture Gardens. Apprently he was out on a "check" of the park and did not specifically give out his location or the vehicle he stopped. I have heard that he was able to set off his emergency ID just after he was shot. This is what sent the multiple officers responding to the Zilker Park area.
He was shot 3 times .. Some reports that all 3 shots were to his chest and some reports say he was shot at least once in the neck. Unknown if he was wearing a bullet-proof vest. A massive search is underway.. They are grabbing every white male with a shaved head or crew cut in a 1960's-1970's Grey or Black GNC 4 door that they can find. At one point, a lady in a trailer park on S Lamar overheard people in the next trailer say "No wonder they are looking for you if you shot a cop" Swat team was called and they have the trailer park surrounded. Then another report that the suspect was arrested in Houston. Katy Pd stopped a subject who shot himself. This subject matches the description of the suspect. Meanwhile, numerous other sightings are being reported. Every bus stop, every corner, every guy walking down the street seems to match the suspect.

CPR was performed at the scene and he was transported to Brackenridge Hospital but he was Pronounced shortly afterwards.

Park Police are not part of APD., They are a seperate dept. I don't know how APD will handle this. As you walk into the main, there are pictures of all the fallen APD officers, including the latest one, Drew Bolin. I don't know if Officer Jones will be included since he was not with APD.
They actually belong to the City of Austin Parks and Recreation Dept I think. We also have an Airport Police and an AISD Police. They are related but they are all seperate Depts. Park police do not have their own dispatcher. They work off the APD radios. The officers have different training than the APD officers. It's a different school (CAPCO) Park officers are not paid as much as APD.

308. Austin Officer Shooting

From: bpckty1@webtv.net
Topic: 308 Message: 308

Katy PD spotted suspect's vehicle eastbound on the Katy Freeway (IH 10) earlier this evening, a chase began, subject weaved erratically through traffic, and his vehicle was disabled (2 blown tires) at the West Belt (Beltway 8) and Hammerly. According to an HPD spokesman, interviewed on KHOU-TV 11, subject exited the vehicle with a .380 sem-automatic pistol, ran into traffic, was struck by a vehicle, then committed suicide. Subject's vehicle and other evidence will be processed by the HPD Crime Lab, Austin Forensics, and the Texas Rangers (DPS, not the baseball team ;^>). Please check Monday morning's newspapers and TV reports for further updates.

Submitted at 10:30pm.

315. BC245XLT

Yahoo group: CenTexComm
Date: 2000-06-01 09:38:42 UTC
From: Robert Barker
Topic: 315 Message: 315

To the person who was just asking a few days ago about getting a cheaper less functional version of the Trunktracker from Radio Shack.

Sears stores are currently selling the BC245XLT
for $179 until they sell out. The rep at (the) local Sears said they will no longer be carrying the TrunkTracker after they sell current stock, so they will not be able to order one if they are out already.

I pulled this from another website. But I do recommend the BC245XLT and not the cheaper one. that only does one system at a time.

Did anyone stay with the SWAT call out last night and know how it ended? I always end up falling asleep.. they stay out there for hours..

John, and list,

You are correct. I did a ride out over Memorial day weekend (based on the time/date stamp of your message I was sitting at RRPD when you sent your comments). The officer I rode with does have LoJack in his vehicle along with the 4 square antenna pattern. He indicated that it was starting to make its way into Texas now. Of course he is disappointed he hasn't gotten a hit yet.

When I lived in the northeast every department, including the state police had LoJack in the cars. They would broadcast "hits" in every intercity channel and coordinate their response and try to triangulate where the car was. Generally someone out there was plotting directions on a map and would generate a track of the vehicle. They got pretty good at figuring out where the stolen car was.

323. Blank Panther March scheduled for Friday

Yahoo group: CenTexComm
Date: 2000-06-15 22:18:47 UTC
From: Robert Barker
Topic: 323 Message: 323

There is supposed to be a Black Panther march at the State Capitol Tomorrow.. I think around Noon. APD is gearing all up. They will have all divisions in full riot gear. Sharpshooters on the roofs. All motor units picked up gas masks today.

Not sure where they are marching from. Usually from the River up to the Capitol.
Should be handled on 460.500 and Capitol on 155.445 and digitally on 460.125

In other news the radio people are fighting over space at the new communications center that is supposed to be built off 51st Street by the old Airport (across from Bartholomew Park).

EMS and Fire wants lots of space cuz they have 24 hours shifts and need beds, Craft-O-Matic Chairs, exercise bikes, etc. TXDOT wants an entire floor .(I don't know why since they only have one person now watching all those cameras). Noone can agree.. APD is paying the most money, yet they want APD to have the least amount of space. This could kill a really good deal. Everyone says if they don't get what they want.. then they are baking out of the deal. This is exactly why none of these agencies can get on each other's frequencies.. noone can agree to anything. They have committees on committees and they just can't agree. It's still projecting 2 years before anything happens. . I just hope the communications equipment will last that much longer.
I think they need to have 8 hour shifts for everyone and eliminate the beds.
OH yes, and don't forget about EOC. Usually only 2 or 3 employees .. yet they want the most space too.
EOC should be at an alternate location anyway.
It's gonna get messy before it gets better.. All this in in the name of a decent radio system

324. Re: [CenTexComm] Blank Panther March scheduled for Friday

Topic: 324 Message: 324

Greetings everyone. Just to update you on what's happening down here at the Capitol at 11:00am. I work in a building across the street from the Capitol (12th and San Jacinto). APD was here either yesterday or Wednesday asking for permission to use some of the extra covered parking spaces we have (our building's actual first floor is above the street level, with parking on the street level). We gave them permission and they have been here since at least 9:00am. Right now, there are probably 10 or so men and women downstairs just waiting around. Some are playing cards, some are reading, some are just sitting around staring into space.

Does anyone have any more specific info on exactly what's taking place?

325. Blank Panther March was today.

Yahoo group: CenTexComm
Date: 2000-06-16 21:21:57 UTC
From: Robert Barker
Topic: 325 Message: 325

Sorry there was not much more info. I listended to APD Ch 8 and it seemed to go off smoothly. I'm disappoointed that News 8 Austin didn't have any details about it since their station is blocks from where this was going on.

I know the snipers were all exctied and kept talking back and forth.. sometimes using "Sierra" designation and sometimes using "Sam" instead of the word sniper.

But JuneTeenth is Monday and something (unfortunately) always happens every year during those celebrations.

327. Austin Radio Activities

Yahoo group: CenTexComm
Date: 2000-06-22 04:09:56 UTC
From: Robert Barker
Topic: 327 Message: 327

It sounds like APD is doing the prostitution stuff again on Ch 7 460.025..
Either that or LoJack Training.. IF a LoJack signal has three 0's then it
is a training signal.

Also They have everyone on standby about this Gary Graham Execution thing.
Governor Bush is in Houston and is due back late tonight. He can't do
anything until the parole board comes back with it's decision which is
supposed to be around noon tomorrow (Thursday). They have been told that
bus loads of protestors may arrive any minute between now and tomorrow night
before he is executed (at midnight?). It could get wild. I'm surprised
that DPS Capitol (for once) handed the 11 arrests on their own on Monday
when the protestors blocked the Lavaca access to the Mansion. The Governor's
Mansion is at 11th and Lavaca.

The bus load of protestors could be the Black Panthers that appeared in
Houston last weekend with guns. That's why APD is on high alert.

Governor's Detail 158.730 (They have DPV scrambling but they don't use it)
DPS Tx Rangers 155.505 (They have DPV and they know how to use it)
DPS Capitol 155.445 (once again these are the ones that patrol every
state building and garage except the capitol). Hey these guys might
actually have to do some real State related law enforcement instead of
concentrating on pulling over teenagers around 6th street.
Capitol Police 460.125 (digital radios) with the occasional in the clear
traffic. 460.075 is Ch 2.
I have never heard TDC radio traffic in Austin but the Statewide TDC Common
is 153.905

328. Gary Graham Execution

Yahoo group: CenTexComm
Date: 2000-06-22 20:14:42 UTC
From: Robert Barker
Topic: 328 Message: 328

All it quiet in Austin at 2pm There is currenly a DPS helicopter circling the Capitol and Governor's Mansion.
The Governor is in the Mansion.. DPS is surrounding the walls of the Mansion. .. both uniformed and ununiformed. They have duffle bags at their feet, which means they have their gas masks.
DPS Capitol is on 155.445, The Capitol Ops are on 460.125 (scrambled) and 460.075
Governors Detail is on 158.730 but he is also getting Secret Service protection on 165.785

All the Austin Police motor units are downtown working on Ch 3 460.450 but are on alert to switch to Ch 8 460.500 if any protestors show up.

Travis County Sheriff's units are across the street on 154.950.

A motor unit said he did see Black Panther Members in the city earlier today but no guns have been sighted. It is still on high confidence that bus loads of Black Panthers or other protestors will show up at any time.

DPS Intelligence is also on 155.505 checking any suspicious vehicles in the Downtown Austin Area.

If something goes down.. I will try and alert over Special/Other or SWAT for Austin.

The execution is set for 6 pm tonight

There may be a 5:30 protest at either the Governor's Mansion or at Bush Campaign Headquarters (301 Congress)

332. Hays and Comal County

Yahoo group: CenTexComm
Date: 2000-06-24 10:01:39 UTC
From: Robert Barker
Topic: 332 Message: 332

for Hays County, the Sherrif's Dept is using LCRA Trunked System. This includes San Marcos PD, Fire (154.265), and EMS.

San Marcos: 935.4625, 935.925, 937.975, 939.150, 939.500, 935.3875 935.975, 937.950, 938.500, 939.8875

Creedmoor: 936.4875, 937.925, 938.425, 938.725, 939.725, 936.650, 939.3875, 936.9125, 937.4375, 938.3875

Sheriff's Dept also still using their 155.865, Ch 2 is 155.970
North Hays Co EMS on 155.895

For Comal County I have 155.595 and 156.000 as Ch 2.
New Braunfels was on 155.130 and Fire on 154.310

County fire on 154.295

Unknown if all this is correct. While in New Braunfels monitor Schlitterbahn Water Park on the business UHF band.. Not sure of freqs but they have at least 2 and they are non stop.

Critical Air is supposed to have started operations out of Brackenridge and Austin EMS and them are already fighting. Not sure if Starflight is now back at their base off Old Manor near Ed Blustein but expect longer response times because of that.
Cristical Air's Distatcher is out of La Grange so I suspect calls will be by pager. I don't know what, if anything they would use in the air to talk to their base in La Grange...but LCRA system would be PERFECT...
Stay Tuned..

Topic: 334 Message: 334

Medivac announced yesterday that they now have a helicopter based out of Taylor Airport in Taylor TX (east Williamson County). This is in addition to the one based out of Temple (I think is where it is).. Does anyone have frequency information for their helicopter program. I know that they have not been on the Williamson County 800 Mhz Trunked System as the dispatchers always have to link them from 154.950. For what it's worth, I do show Scott and White Hospital licensed for 462.975 and 460.600 and 462.975 if anyone can confirm that it might be one of these.

It is my understanding that Medical Helicopters have to do "flight following" at regular intervals which requires them to have radio contact with ther dispatcher.

John Mayson wrote
"The Elgin PD uses the LCRA system. 10-025 is their dispatch channel and 10-026 they refer to as "channel 2". Last night I heard them referring to their "car-to-car" channel, but heard no related traffic on the LCRS system. Do they still use their VHF car-to-car channel?"

Usually the Car to Car that they refer to is always 154.950. I believe Elgin still has the VHF radios as they are a part of Bastrop County and need talk to them at times. I do not know of a Car to Car channel for LCRA? Perahaps they are still also using their 155.430

If you want to hear some very funny car to car.. listen on Westlake's old VHF frequency 155.910 they may only talk once a day but they carry on like noone is listening to them. It's funny that they rejected this for normal patrol use due to "interference" I'm guessing ..yet it seems to work fine for Car to Car use.. The reason it's so good is that it's still a repeater so you can hear it all over the county. Just when you thought frequencies were getting scarce..... Westlake PD is now on 857.9375. They wanted to go in with the City of Austin on their new system but they gave up waiting sighting that their VHF equipment was on it's last leg and was barley working.. Seems to be working excellent to me.

352. I35 Shut down ???

Yahoo group: CenTexComm
Date: 2000-07-28 09:57:09 UTC
From: Robert Barker
Topic: 352 Message: 352

There seems to be some discrepancy as to if I35 will be shut down this weekend at 290 and at Woodward. First they said it would definitely happen and then they said it would not. They will probably use APD 8 460.500 or APD 7 460.025 for the closures. Another excellent freq for this is the barricade people on 852.2375. Also don't forget TXDOT is still on low band 47.18 47.08 47.06 and on LCRA 900 system. If/when they do shut it down.. all traffic will be routed to the feeder roads and it will happen from Friday night to Monday morning so it's the WHOLE WEEKEND. If it's anything like last time, avoid this area at all costs.

I found a pretty good webpage that seems to be updated daily on Road conditions for Austin

http://www.dot.state.tx.us/insdtdot/geodist/aus/newsrel/laneclos.htm

Summerfest is going on at the Airport Hilton Tonight (Friday) and Saturday. They usually have a pretty good SWAPFEST at the hotel of used ham radio gear, antennas, batteries, etc. Pretty cool to check out if you haven't been to one. This is a ham radio convention that happens every year. Best approach would be from Airport Blvd or Mopac to FM2222 exit and then it's right on the east side of Highland Mall.

Cedar Park OKs $3.4 million in debt for police and parks

By Michelle M. Martinez
American-Statesman Staff
Friday, July 28, 2000

CEDAR PARK -- The City Council on Thursday approved borrowing up to $3.4 million to pay for a citywide radio system, parks projects and a computer dispatch system for the Police Department.

The city will issue certificates of obligation, which do not require voter approval.

All five council members present voted for the measure with no discussion. Members Cobby Caputo and Jim Ernst were absent.

Owners of the average-value home worth $115,000 will see their tax bills increase about $21 next year to pay for the projects.

The council considered a proposal of more than $7 million at its July 13 meeting but cut items such as laptop computers for police cars, a new telephone system for the Police Department and high-tech equipment.

The radio system, which will allow the city to join a countywide system, the computer-aided dispatch system and park projects will cost an estimated $3.3 million.

A major item removed from the original plan was about $3 million to buy land for improvements to the intersection of U.S. 183 and FM 1431. The board that oversees the City of Cedar Park Community Development Corp. has committed to purchasethe land and pay for engineering work to widen FM 1431 but must hold a public hearing first. The land and engineering cost is expected to total $3.5 million.

The hearing is scheduled for 6:30 p.m. Aug. 31 at the Cedar Park Public Library, 550 Discovery Blvd.

The board manages proceeds from a half-cent sales tax used for development projects, including road work.

358. Austin TX Police New Frequencies

Yahoo group: CenTexComm
Date: 2000-08-01 22:09:37 UTC
From: Robert Barker
Topic: 358 Message: 358

I was digging around in the FCC website and found this list of Frequencies licensed to APD for 800 Mhz.
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/slm_freq_res.hts?db_id=16&file=A057593&key=1

The frequencies (105 of them) range from 866.0125 to 868.975 and include the 5 common ones found on all 800 Mhz Government Systems.

APD also renewed their licenses for Intercity: 155.370, and 154.950.
Thanks to Mike Simpson, with the city for getting this stuff updated.

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/slm_site_res.hts?db_id=16&link=0&callsign=A058083

359. Austin TX Frequencies Licensed for Trunked Public Safety

Yahoo group: CenTexComm
Date: 2000-08-02 01:35:22 UTC
From: Robert Barker
Topic: 359 Message: 359

These are the frequencies LICENSED for Austin Tx proposed Public Safety System. Even though they are LICENSED, it does not mean that all of them will be active. LCRA licensed much more than they are using. I have not gotten an official date but possibly not until 2001. The system is supposed to be digital but (then again) so was LCRA's system before they found out digital did not work for them. . This is one part of a major Multi-Million Dollar project which involves new CAD Computer Aided Dispatching and a New Dispatch Center off 51st Street by the old Airport Hangers. This as of 8/1/2000 rbarker@...

Well Cedar Park licensed: 856.7625, 857.7375, 858.7625, 859.9375, 860.7375

So you might check those.. but yes, I suspect they may have finally gone to
Williamson County's System.

But here's another Possibility. I check the FCC website and here are some
weird listings for Leander TX. The weird frequencies sound like a new
Narrow Band FM Radio System. I Don't know much about this but I don't think
they can be monitored that well with a scanner.. you might try the
frequencies in the AM mode to see if you hear anything there.. Let me know
what you find:

156.1575
154.8075
154.9925

also they licensed 45.08 ??
154.100 which I assume is the input to 155.88
452.750 Leander High School
154.355 ?? If this fire since Fire Dept is or was on 460.625
158.940 ??

Subject: [CenTexComm] Scanning on the road

Whenever I travel, I often put my scanner in service search mode and listen to a dizzying array of conversations. Other times I'm not scanning, but see a patrol car or fire truck flying down the highway and I fumble with my scanner trying to figure out what is happening.

I am busy creating web pages for various Interstates and US highways I frequently drive. Each is broken down by county (parish). I use AvantGo to synchronize these pages to my Cassiopeia. Now whenever I'm on the road, I can quickly determine what the local frequencies are should I want to hear the action.

I would like to take this a step further and have my Cassiopeia program my BC245. I have written a C program that does this, I just need to port it to my Cassiopeia. Can anyone suggest a WinCE compiler? I'm assuming I can connect my Cassiopeia docking cradle to the serial cable for the BC245 using a null modem adapter.

365. DPS Trooper Shot

Yahoo group: CenTexComm
Date: 2000-08-04 00:34:06 UTC
From: Robert Barker
Topic: 365 Message: 365

At approx. 10:30AM today a DPS trooper, Randy Vetters (sp?) was shot while on a routine traffic stop in Hays County on I35 at Mile Marker 244 near the Yarington Exit. The Trooper had reportedly pulled him over and issued a citation for not wearing his seat belt, when the 76 year old man went back to his car and pulled out a long rifle gun and went back up to the trooper and shot him in the head. The trooper was taken to Brackenridge Hospital in Austin and is reported to be in serious condition after many hours of surgery.

The man said he shot the trooper because he felt his rights were being violated for being cited for no seat belt violation. The news reported that the same man was issued a no seat belt violation in about the same place 2 months ago.

From: Robert Barker
Topic: 370 Message: 370

John and the group. I called Leander PD and they confirmed they are using digital radio system and have been for about 6 months now. I assume it is those new frequencies. She said they had to change out all the radios in the cars so that would explain the new frequencies. She said they can talk to Cedar Park on Tac 3 which she thinks is 154.950 Intercity. She also said they hope to be able to eventually link to the Williamson County system. Not sure I know how they would do that.

She said it works ok. I might have to go over there and check it out sometime.

371. I 35 Shut down this Weekend

Yahoo group: CenTexComm
Date: 2000-08-05 09:25:57 UTC
From: Robert Barker
Topic: 371 Message: 371

I-35 Completely Shut down between Ben White and Oltorf both directions from now to 6am Monday. . Major Delays are Expected. If south, take Slaughter West over to Mopac and go North that way.. If North Take 183 West to Mopac and Go South. This is expected the next few weekends and next weekend will include a shutdown at 290 near Highland Mall.

Check this site for more info:

http://www.dot.state.tx.us/insdtdot/geodist/aus/newsrel/laneclos.htm

It's a good time to monitor TxDot frequencies during this fiasco. They are coordinating the Whole deal. LCRA's South Tower is Creedmoor:

936.4875, 937.925, 938.425, 938.725, 939.725, 936.650, 939.3875, 936.9125, 937.4375, 938.3875

TxDot talkgroups are around 10-037
APD will probably coordinate on 460.025 or 460.500

Also this weekend is the TAX-FREE weekend for shopping of Clothing and Shoes. The stores were already packed yesterday:

Barton Creek Square Mall Security 464.675
Highland Mall Security 452.300
Lakeline Mall Security 464.575
463.8875 Northcross Mall (466.6875 Oshmond's)

Also at stores like Target, Wal-Mart you will find radios in the 154.600 or 154.570 or 151.625 464.500 464.550 469.500 469.550 or search 151's for Wal-Mart.

Ambulance response times improve

By Samantha Sommer
American-Statesman Staff
Sunday, August 6, 2000

Two years after the City of Austin and Travis County joined forces to provide Emergency Medical Services, city and county officials say they're responding to emergencies faster.

The agreement resulted in the addition of five EMS stations in the county, which has put workers in the county closer to the emergencies and freed more in the city to respond more quickly to city incidents.

The most dramatic improvement in emergency response is in Lago Vista, where a new outpost at the Fire Department opened in December. That has meant a drop in response times from an average of 20.69 minutes in 1999 to an average of 12.75 minutes in 2000.

Response times for 2000 compared with 1999 also improved at the other areas where stations were built in the past year. They dropped in Pflugerville and West Lake Hills by about three minutes and in Manor by about four minutes. Data is not available yet for Southeast Travis County because the station opened for full service about a month ago.

One more station is slated to open next year in Jonestown/Sandy Creek.

Austin and Travis County EMS remain separate legally and have separate budgets, but patients wouldn't see a difference or realize they are getting a city or county ambulance.

"The management teams have achieved a level of harmony never seen in the past," said Chris Callsen, Travis County EMS director. "We call ourselves Austin/Travis County EMS and in all areas we are as close to one organization as possible without legally being one. It affects how we think and how we act."

Response times are an important factor for EMS because each minute earlier a person receives medical attention means a 10 percent greater chance of survival, Callsen said.

Times went down because more stations mean ambulances are closer to calls and need not leave from Austin to reach far-out areas, Callsen said.

An added benefit is that more city-based ambulances are available to take calls close to home, said Ed Racht, director of Austin EMS.

"We have seen a drop in the response interval in both the city and the county," Racht said. "It makes sense that when you put an ambulance in Lago Vista or Pflugerville to respond to calls, that leaves an ambulance in the city available to respond to a city call."

Austin EMS times for 2000 average 7.01 minutes in the city, down from 7.70 minutes in 1999. The county average is 11.6 minutes, down from 13.23 minutes. The systemwide average this year is 9.03 minutes, and the industry standard is 10.59 minutes.

Another important number for the services is the cardiac arrest survival rate, which measures the portion of EMS patients first discovered with no heartbeat who leave the hospital alive.

In 1999, the system had a 9.6 percent cardiac arrest survival rate, and in the first six months of 2000, it climbed to 11.7 percent. The national average hovers around 3 percent and is declining.

A side effect of unifying the emergency services is a better working relationship between the city and the county, Racht said.

Many of the new county EMS stations are in local fire departments, meaning the paramedics and firefighters work and live side by side, as at the Emergency Service District No. 2 in Pflugerville, Chief Ron Moellenberg said.

"The ESD-EMS relationship has been excellent always on the street level," Moellenberg said.

Now that the relationship has moved from the street to the station, "there are many evolved friendships," he said.

At the administrative level, the results of the partnership have pleased both county and city officials, Racht said.

"It had its rough times, obviously, but looking at the numbers and performance has been very reassuring," Racht said.

385. Frequency for Medivac Scott & White in TX

Yahoo group: CenTexComm
Date: 2000-08-19 13:33:36 UTC
From: Robert Barker
Topic: 385 Message: 385

Looking for any frequency info for the Medivac Helicopter Program out of Temple TX run by Scott & White Hospital. They now have a helicopter based in Taylor TX and I'm looking for Frequencies they use to communicate to their dispatcher. Yes I am already familiar that they use intercity 154.95 and can be linked to Williamson County SO's Trunked System but I'm looking for communication between their dispatcher and the Medivac.

In Austin, TX Austin EMS now can talk to all aero helicopters on 122.850 to coordinate landing at Brackenridge Hospital

386. Bryan/College Station scan group

Yahoo group: CenTexComm
Date: 2000-08-30 03:21:06 UTC
From: Sly Kapchinski
Topic: 386 Message: 386

Hello all:

I would like to put in a quick plug about a new group forming to
cover
the Bryan/College Station area. It is on egroups.
Please follow the link if you are interested in joining:

http://www.egroups.com/group/bcsscan

The group is new, not very many members and hardly any traffic yet.
So
if you live in/near the area (B/CS) please subscribe.
I know this group (centexcomm) kinda covers this area hence the name,
but I don't hardly recall seeing a post regarding Bryan College
Station. Seems to be centered on cities along the I-35 corridor. :-)

thanks for your time.

Sly K. N5GQB

387. Anderson Mill MUD Frequency

Yahoo group: CenTexComm
Date: 2000-08-30 17:00:07 UTC
From: Frank Jacks, Jr
Topic: 387 Message: 387

I'm still relatively new to scanning and have a "newbie" question.
According
to percon, Anderson Mill MUD is on 173.2038. I live out there, but when
I
try to input this frequency into my Radio Shack Pro-89 scanner it changes
the frequency to 173.2000. Will this still work, or should I just take
the frequency out?
Thanks,
Frank

389. Round Rock police in College Station

Yahoo group: CenTexComm
Date: 2000-08-31 02:13:58 UTC
From: Sly
Topic: 389 Message: 389

Heard Round Rock Police units (mobile) in the Bryan/College Station area today. I believe (guessing) they were here for the A&M Riverside campus police training as they had much to talk about nothing.
They were talking simplex on NPSPAC3 which is 867.0125 with no pl or dpl. Don't know how long they are/were here for. However they were talking about eating somewhere and gassing up this evening so prob. they were on their way back.

390. Re: [CenTexComm] Round Rock police in College Station

Yahoo group: CenTexComm
Date: 2000-08-31 04:10:54 UTC
From: Robert Barker
Topic: 390 Message: 390

Sly, Thanks for your frequency report from Bryan/Collge Station..

I knew Round Rock and Williamson County were equipped with the 5 NPSPAC frequencies but I have never heard them use them. I Think the first 2 channels are even repeaters with no PL tone as it is supposed to be.

Those freqs are: 866.0125 866.5125 867.0125 867.5125 868.0125

They had another large grass/brush fire today in the same place as about a week ago.. AT County Rd 111/ Westinghouse Rd. near Georgetown. They used both Starflights and even a Blackhawk. In every single fire I have units asking how to talk to other units.. Today I heard the Blackhawks on 154.280 asking if there was any way to talk to the TXDOT bulldoziers.. NOPE., sorry.. perhaps in a perfect world.. you will never hear bulldoziers, helicopters and Fire unis on the same frequency.. Noone can get organized.

And even with this fire using a public safety talkgroup.. you will never have fire units and PD units and EMS units all on the same talkgroup.. They just will not cooperate.. No agency wants to have to talk to another agency.

They also had a pretty bad fire in Lago Vista and needed help from Jollyville, N Shore, Cedar Park, Fire Control, etc.. Even with a close proximity.. they still each used some of their own agencies frequencies rather than all going to 154.280.

391. Re: Round Rock police in College Station

Yahoo group: CenTexComm
Date: 2000-09-01 04:12:07 UTC
From: Kerstin Joos
Topic: 389 Message: 391

Having been in the Round Rock PD units for ride alongs I can confirm that they have the 5 NSPAC frequencies in them. They only use those when they leave the Williamson County repeater coverage, so we will not hear RRPD using the freqs in normal circumstances.

I was listening in to the brush fire up on Westinghouse also. All the fire units from the Williamson County towns were patched together onto one of the Georgetown Fire TAC channels. The police units, mainly RR and Williamson County all finally moved to EOC1 with RR and Williamson County having command at different times. It sounded like they were using the PD units on EOC1 to handle traffice control, news report control, and help direct all the dozers, while the fire command on the Fire TAC worked on the hot spots with at least one senior staff up in a helicopter with a radio on the TAC channel. So they kind of got their act together after a while.

I have heard RR patch both PD and FD together for some of the fire scenes so they can communicate. It depends the dispatcher (do they think of it) or if one of the people in the field requests the patch. The dispatchers sometimes forget they can do it because the fire dispatch normally is handled at one desk, while the PD dispatch occurs at different desks, even though it may be the same dispatcher. All the desks can communicate with PD, fire, etc. but for other reasons they keep them seperate. Another reason that the patches are not always made is because of the different radio traffic that the fire and police units have.

As a side note, I do know of at least one RRPD officer who has his cruiser radio setup to scan the RRFD talk groups in addition to the RRPD groups. He wants to keep abreast of any incidents that occur in his beat, and may check by if he doesn't have any calls to run.

George

392. lcra system & etrunk

Yahoo group: CenTexComm
Date: 2000-09-01 19:36:28 UTC
From: Chris Howell
Topic: 392 Message: 392

has anyone got etrunk to work with lcra's system?? i can't get either etrunk or etrunk48 to "see" it at all (then again, i haven't "seen" anything with etrunk/etrunk48!)

thanks, chris

394. Spill - San Antonio River

Yahoo group: CenTexComm
Date: 2000-09-02 18:56:20 UTC
From: Dayne Daines
Topic: 394 Message: 394

FREQ: SAFD 1-Lima

There has been a spill of chemical into the San Antonio river on the southside of San Antonio. HAZMAT has been on scene for more than an hour. They are using booms across the river and building earth dams across streams and drainage ditches to try to block the product.

Some fish have been killed. Concern for downstream irrigation users.

Parks in the area have been closed by Park Rangers. SAPD has closed several roads.

TNRCC emergency response enroute (freq?)

SAWS emergency response enroute (freq?)

395. Texas Forest Service Frequencies

For those that did not see Brandon Thetford's post on the
dfwscan@egroups.com
post: According to http://ticc.fws.gov/ii.htm

Here is a List of Frequencies We might expect to hear Action on: They
Specifially list cities of Johnson City, La Grange, Austin, Waco, Mineral
Wells Airport and Bastrop

Ch. 1HH 159.2850 (No Tone) - Satewide Compact (Used at Incident Cmd Post)
Ch. 2HH 159.3000 (PL 127.3) - Air to Ground Primary
Ch. 3HH 151.3850 (PL 127.3) - Air to Ground Secondary
Ch. 4HH 154.2800 (No Tone) - Mutual Aid "A"
Ch. 5HH 154.2650 (No Tone) - Mutual Aid "B"
Ch. 6HH 154.2950 (No Tone) - Mutual Aid "C"
Ch. 7HH 159.4350 (PL 114.8) - Tactical 7
Ch. 8HH 151.4750 (PL 114.8) - Tactical 8 (Primary Tactical)
Ch. 9HH 159.3150 (PL 114.8) - Tactical 9 (Secondary Tactical)
Ch. 10HH 159.4350 (PL 127.3) - Tactical 10
Ch. 11HH 151.4750 (PL 127.3) - Tactical 11
Ch. 12HH 159.3150 (PL 127.3) - Tactical 12
Ch. 13HH 154.9500 (No Tone) - Car to Car - Law Enforcement Link As Needed
Ch. 14HH 168.6250 (No Tone) - Air Guard (Air to Ground Secondary)
Ch. 49 159.4200 (PL 225.7/TX 151.160 94.8PL) - Local Flight
Following
Air-Air 123.025 Primary Air-Air Outside Austin
Air-Air 122.925 Secondary Air-Air Inside Austin

398. Austin Police making some Changes

Yahoo group: CenTexComm
Date: 2000-09-16 18:28:09 UTC
From: Robert Barker
Topic: 398 Message: 398

APD has announced some changes that will take place, (probably will take awhile)

They will be adding 2 more sectors.. They currently have six and will expand to 8. I assume this will be George and Henry sectors. Don't know what parts of town but Charlie and Edward are the busiest sectors so It will probably involve them.

They have received grant monies for the purchase of a HELICOPTER., They are already talking about using it to catch speeders.

They will be adding a 311 phone system for Non-emergency calls to relive the pressure off 911, Right now they pretty much have you dialing 911 for every thing police related emergency or not.

As on Last night, they were working the I35 / 290 Shutdown on Ch 12 direct 460.475

400. Forestry Base in Georgetown

It could be related to the recent events in the Middle East (Aden). Or, a couple of days ago, airmen from Ellington Field went to Saudi Arabia to enforce the No Fly Zone in Iraq. Some reservists returned to Texas this week from the Balkins. Replacements, maybe? Normal training? So many possibilities, so many speculations, much conjecture.

409. radio shack card getting ridiculous

Yahoo group: CenTexComm
Date: 2000-10-13 02:50:18 UTC
From: Sly
Topic: 409 Message: 409

Sorry for maybe being slightly off topic but since RS sells a lot of scanners and many of us have RS credit cards I feel it is of worthiness to post.

Boy, I read my latest new credit card agreement that came with my bill and this Hurley state bank is getting crazy! (Which issues the RS credit card)
First off the interest is going up again (up to might as well say a whopping 24%, actually 23.85%) for "best" rate. That's ludicrous. I feel sorry for the people with the standard rate (28%) .
Also now they will charge you a $5 charge in the form of interest if you pay your bill at any place other than mailing it in to the address on the bill. I guess this means paying your bill at the store is out now.
Looks like if I buy anything on credit again at RS I'll use a visa/mc.
And yes I have a RS gold card with a perfect payment history on top of that.
Sly

410. Bad Fire in Adam Sector Austin TX

Yahoo group: CenTexComm
Date: 2000-10-13 11:30:47 UTC
From: Robert Barker
Topic: 410 Message: 410

Last night there was a bad fire in Adam Sector. 5100 blk Cat Mountain Drive..

Started as a couch fire and then the whole house.. 3 children were transported to Brack with CPR in progess on all 3. The father is reported to have 95% burns on his body.

The children are in critical condition, but still alive. According to the news, this same family lost the mother about a year ago.

I was at work and unable to send out an www.incidentpage.com on the fire.

Meanwhile, the Fortune 500 Continues.. Most of the traffic is on:
APD ch 7 460.025 Motorcade and Escorts
APD ch9 460.500 SWAT and Security

411. Updated amateur repeater listings

Date: 2000-10-14 22:21:44 UTC
From: Myles Barkman
Topic: 411 Message: 411

Sorry if you receive this more than once. This won't be long.
I just updated my amateur radio repeater listings for Texas, D/FW, and Houston.
I am temporarily putting them on a different server than the rest of my web pages.
If you go to http://www.clarc.org/~kg5ai/freqs/freqs.html , you will get to a page that should automatically take you to the updated lists.
Don't save any bookmarks to the pages at w5ac.tamu.edu because as soon as I can FTP the lists back to clarc.org, I will stop using w5ac.tamu.edu.
Sorry for this confusion, it's no picnic for me either.
Anyway, enjoy the lists and PLEASE, send me any corrections, additions, or deletions. Pay particular attention to any repeater listing that has "(check)" at the end. These will eventually be deleted if I don't hear anything about them or I can't confirm them.

Thanks and happy listening...

412. Travis County Sherrif Frequencies

Yahoo group: CenTexComm
Date: 2000-10-15 23:30:51 UTC
From: Frank E Jacks, Jr.
Topic: 412 Message: 412

Here's my situation. I live in northwest Austin (620 and 183 area). I have localized frequencies programmed into banks 1 & 2 for listening when at home. I have programed both 154.0850 and 155.3100 into the scanner for Travis County. So far, I can't see any rhyme or reason for how dispatching determines which channel to use for which events/items. I would like to program only the channel used primarily for the northwest portion of Travis County. Any help would be appreciated.

Frank,
RS Pro-89 Scanner

for Travis County. So far, I can't see any rhyme or reason for how
dispatching determines which channel to use for which events/items

Sorry to take so long to respond to this.. ..Ok the Memo that TCSO put out
when they made this change was that the frequencies would be divided East
and West of Hwy 183. The way it breaks down is:

West Radio 155.31 ADAM district
DAVID district
C20, C21 C22
Rollingwood
Sunset Valley
East Radio 154.085 Baker
C10, C11, C12
Mustang Ridge
Rabies Control
I do have a map of the districts but it is older.

Austin Police is now using the Central East Substation.. not to be confused
with the old East Sub on Springdale.. but you will hear them on the radio
saying they are enroute to CESUB and this is at the old Mueller Airport.
Not sure where the entrance is.

417. Traffic helo's Freq's

Yahoo group: CenTexComm
Date: 2000-10-20 00:41:22 UTC
From: Robert Barker
Topic: 416 Message: 417

Regarding Traffic Helicopters:

You can hear Leslie Gambino, Metro Traffic on 450.9625 and 455.9625. I think she does the actual broadcasts on 455.9625 and they talk to her on 450.9625. I need to remind you that these frequencies fall within the BA - Remote Broadcast Band and are therefore illegal to monitor, as you are hearing undocumented and unofficial news (and traffic) reports. So take that as you will. Leslie is in an airplane not a helicopter.

Another Traffic company uses 461.750 they are interesting.

News 36 Helicopter is on 450.1125 - again falls within the BA -remote broadcast band. They don't say much and I still can't believe that News 36 uses a helicopter for traffic but doesn't use it much for spot news.

KEYE's Capt Mike is on 800 Mhz which is where KEYE is.

I have also heard lots of chit-chat on 123.025 between the different companies.

There is a company that does barricades and cones at traffic closures on 852.2375. They are sometimes a good source of traffic and road closures.

also I have to keep plugging this frequency cuz it is a hoot. 464.025 used by the horse carriages downtown.. they give you play by play talking about what is going on downtown.. You will feel like you are there.. they talk about drunks and how funny they are, they talk about cops, and they talk about what clubs have the biggest crowds and where the traffic jams are. Of course most interesting listening is on Friday and Sat nights well into the night.

What is the theory/thought process that prohibits monitoring the traffic helo frequencies? How is their communication any different from the police or fire communications.

Well I never understand half the laws on the books.. but it is my understanding that remote broadcast or BA frequencies are un-verified un processed news. and it's listening to news agencies preparing their stories. Supposdly until it is broadcast to the public, it is not intended for the general public. My thought is that as long as you are listening for yourself and not telling anyone at all what you are hearing.. then I think it is ok and if you are not telling anyone then you shouldn't get in trouble for it. I guess I would just be careful monitoring in ;ublic where others might see you doing it.

I was listening yesterday and I think I heard Leslie Gambino on 461.75 also so I guess it's all the same company.

432. Pro-92 Purchase

Yahoo group: CenTexComm
Date: 2000-12-06 15:02:47 UTC
From: Frank Jacks, Jr
Topic: 432 Message: 432

Hello all,
I live in the Anderson Mill area of Northwest Austin. Currently I have a RS Pro-89 scanner. This scanner works great for the Austin frequencies, but since I live in Williamson County, I am interested in listening to their trunked system. I can listen to their frequencies on my current scanner but sometimes it can be hard to follow the conversation, as my scanner won't trunk.
I have a couple of questions for the group:
---I was thinking about purchasing a RS Pro-92 while it's on sale. I've heard that there is some firmware problems with particular models of this scanner. Would any of these problems effect my listening to the Williamson County trunked system?
---I've also read on this group that Austin has been working on switching to a new system sometime in the future. Would the Pro-92 work on the new system Austin is contemplating using?
---Lastly, what is y'all's general opinion of the Pro-92 scanner?
Thanks,
Frank

433. Do not recommend a Pro-92 Purchase

Yahoo group: CenTexComm
Date: 2000-12-07 02:37:49 UTC
From: Robert Barker
Topic: 433 Message: 433

I do not recommend the Pro-92. The radio has been plagued with problems. I am told that it will not even display the correct talk groups that correspond to the listings on certain talkgroups. For instance, one of the very active systems here in town is the LCRA.. they include the LCRA rangers.. and TxDOT Courtesy Patrol uses their system, so does all the other TxDot Crews, Elgin Pd, CARTS, Manor Police, etc.

Anyway the LCRA rangers for instance are on 02-074 but you will not see that on a Pro-92, I guess you'd have to tape a calculator to the side or carry around a decoder chart because none of the talk groups are listed in the pro-92 format and you have to do some sort of mathematical conversation to read it.. but the 92 does have the advantage of alphanumeric display to try and make it better. But it is very difficult to program that info without a computer. and it's hard to computer program a handheld when you are not near your computer. If you Insist on a Pro-92, then I am not sure what version is best.. Check
http://www.pro-92.com/ but Radio Shack tried 3 revisions of this radio and they still don't have it right in my opinion.

The Best Trunktracker is the Uniden BC 245XLT
http://www.uniden.com/docs/store/itemdetail.cfm?item=BC245XLT
For $176.80, when in stock.. they go in an out of stock several times a week, so check often.

Williamson County uses a Motorola Type 2 system. You can monitor very easy using the Trunktracker.
Meanwhile you can try to listen to the mess monitoring the regular channels or one suggestion would be to monitor the input freqs and you will only hear the units close to you.
Inputs on 800 Mhz are 45 Mhz below the outputs.
So they would be 809.9875, 811.9875, 812.9875, 813.9875, 814.9875, 815.9875, 811.9625, 812.9625, 813.9625, 814.9625, 815.9625

Anderson Mill has Jollyville VFD on 154.355, TCSO uses their Car to Car channel a lot on 155.07, Lakeline Mall is on 464.575

Austin has announced they will attempt a Motorola DIGITAL radio system about 2 years from now. There is currently no scanner on the market that will monitor digital signals. Only time will tell how successful this system will be. Some cities love it and some hate it. San Antonio tried an analog Motorola system for several years and they are fed up with Motorola and are suing them and going with GE. San Antonio's problem was they abandoned their UHF system the day they turned on their 800 system and it has been a nightmare for them. Hopefully Austin will keep their UHF stuff in place until they are absolutely sure this will work. I have my doubts. So almost anything can happen in 2 years. Don't base your decision on

Austin going Digital cuz it may not happen.

I get so frustrated because I see them say the primary reason they want to have everyone on one system is for the ability for them to talk to each other.. but that doesn't happen.. In Williamson county, for instance, the police do not have the EMS talk groups and EMS does not have Police Talkgroups.. they can't scan them they can't monitor them (unless they had a Trunktracker).. and they have created "common" talk groups but not everyone has them or uses them and they still don't use them. The only true system is if everyone had everyone else's talkgroup and could come up on anyone's channel and talk to them. But I have never seen that happen.

434. PRO-92

Yahoo group: CenTexComm

From: ExLngHrn@aol.com
Topic: 434 Message: 434

I have a PRO-92. Make sure you get the A or B model. It will be displayed on the back of the radio right behind the catalog number (20-522). The only difference existing between the A & B is that the B model is made in China.

The PRO-92 DOES display Motorola talkgroups in the regular decimal format. It displays the GE EDACS talkgroups in decimal, rather than Uniden's AFS format.

It's a good radio, especially on conventional because of tone decoding and alpha numeric display.

If you have any PRO-92 questions, email me.

Wes Ogilvie

Frank,

I do not have a PRO-92 (I use my BC895XLT desktop and/or Trunker), but I have helped a couple of people get setup on PRO-92s for the Williamson County system. Those people haven't been unhappy with their radios once they were correctly setup. But Williamson County is a Moto Type II system as Robert pointed out. If you are going to only listen to Williamson County it is probably going to decode OK, especially with the alpha tagging. The LCRA system is different enough and I have no experience with it so I can not comment.

The one issue you might have is that you live in Anderson Mill which is on the edge of the county. I live in Round Rock so I have no problem picking up the system. But I work on for Motorola at the Parmer Lane site (between 620 and McNeil) and I do have some reception problems inside the building (the tower is up in Georgetown). I finally brought in an old mag mount antenna and stuck it on my big metal file cabinet to get better reception. If you go with the PRO-92 you might want to check out the return policy (30 days???) and try out the radio first.

If you really want to monitor Williamson County then you do need to get a trunking scanner of one kind or another. FYI - since you live in Anderson Mill you should understand that Cedar Park and Leander are not on the Williamson County trunked system. Out your way the interesting traffic would probably be the Sheriff and EMS along with the other county traffic (road crews, etc). If you don't care about those agencies, you want to consider waiting for awhile to see what Austin does and if someone develops a scanner to monitor them. Otherwise you can have fun listening to Round Rock and Georgetown.

If you have any questions about Williamson County feel free to ask.

George

437. George W. Bush going to Crawford

Yahoo group: CenTexComm
Date: 2000-12-09 14:10:10 UTC
From: Robert Barker
Topic: 437 Message: 437

George W. Bush is going back and forth from Austin to Crawford several times a week. They always travel in Suburbans (the national car of Texas). I'm told his security detail has it's own talk group on the Waco/McLennan County Trunked system that is monitored by the SO in case they need something.
http://www.lcblanton.com/trunked/tx/waco_.htm
I'm not sure if they also have access to other systems, such as Bell or Williamson County. Just wondering if anyone has heard any related radio traffic.

He has both DPS Executive Security and Secret Service with him. They are heavily using 158.730 and 165.7875 in Austin, but most of the traffic is DVP (digital). Also they may try to use SS MIKE for communications in Crawford 165.2125. We have a media circus outside his mansion with satellite trucks, etc. They have ladders so they can see over the walls of the mansion and get above the crowds when he comes out to wave at people. Many of the media are from out of town and use FRS (Family Radio Service) DPS may also be using 155.505 in Crawford. Capitol PD around the mansion in Austin is on 155.445, also Capitol Detail is digital on 460.075

438. Winter Weather & Scanning

Yahoo group: CenTexComm

From: Frank E Jacks, Jr.
Topic: 438 Message: 438

Thanks to everyone with the trunk tracking scanner information and opinions. Ultimately, the decision wasn't mine afterall. My wife bought the Pro-92 for me for our anniversary!! So far it has worked just fine. Of course, I haven't had a chance to do any EDACS scanning, only the Williamson County Motorolla II system.
And thanks to Rober Barker for his updates of what's going on with the governor. I work downtown across the street from the capital and have enjoyed listening to all of Bush's scanning.
Now I have another question. I've never had a scanner during the winter months and am looking forward to what that might entail. Are there any frequencies that are particularly during cold, icy, wintery weather? How about sanding trucks etc? What would be happening at the EOC, if anything? And what kind of radio transmissions come from the EOC, what do they talk about, and to whom do they talk? Do SKYWARN and the hams/react get involved?
I hope this doesn't sound too "newbie" like, but I'm really interested in what new kind of scanning we might be in for.
Thanks,
Frank

From: Robert Barker
Topic: 438 Message: 439

TX Dot seems to have made a change to the LCRA 900 System so expect to hear them on LCRA 900 Mhz system this winter. They also could still be on their low band freqs of 47.18 47.06 47.08 but I hope not cuz I'd like to be able to hear sand trucks from all over Central Texas. The Courtesy Patrol trucks are on the system all the time talking to each other.

http://www.trunkedradio.net/trunked/tx/lcra.htm
The (north) "Austin" site is on I35 near Westinghouse road near Georgetown. The south Austin site is Creedmoor and the West Austin site is Lago Vista and East Austin site would be Elgin.

City of Austin San Trucks are on 155.760.

Tonight was the 1st night for the Zilker Trail of Lights. Expect to hear nightly traffic on 460.025 and probably may have to lock out that frequency for awhile since it's pretty "boring" but if you really like that, then you can monitor the Parks Dept on 453.325 and 453.575. Last year I found the kids assisting with parking at Zilker using handhelds on 153.530 but I think that is now some sort of data frequency. React people may be out there on a 462.675. and the horse carriages on 464.025

Well we are officially iced in right now.

Tx Dot is Non stop traffic. APD is very busy. Wrecks everywhere.

On LCRA's 900 Mhz system, the following talk groups are most active:

04-061 San Marcos EMS Dispatch
10-035 TxDOT Highway Crews and Sand Trucks mostly north Travis Co
10-037 TxDOT Courtesy Patrol (ID as 3491 on police freqs)
10-042 TxDot Sand Trucks: Pflugerville and Williamson County
15-143 San Marcos Fire Dispatch

Also hearing Tx Dot Sand Trucks on low band 47.08 especially south units

I have a cable modem and the Tx Dot KVUE cameras are now featuring live
streaming video of the cameras along 183 and on I35. Check it out:
http://www.kvue.com/video/highband.html
Very Cool. If you don't have a cable modem, you can always click on the
still pictures.

Also DPS is very busy.. if you can hear the mobiles on 154.680 and the base
on 155.460. There is a relay for New Braunfels units on 159.210

Austin EOC may pop up on 453.525 and 453.550

From: Robert Barker
Topic: 446 Message: 446

Yes, I know I know.. not another group but in keeping with the tradition of www.incidentpage.com
I have created an egroup for the ASA group which includes Incident Pages for the areas of Austin, San Antonio and Corpus Christi, TX.

You can sign on by going to www.egroups.com and clicking on My Groups and then SEARCH for IPN-ASA and it should come up, and then you can ADD that group to My Groups.

If there are other areas besides ASA (Austin/San Antonio) that you are interested in, then SEARCH for IPN only and you will see all the groups affiliated with IPN

If you are totally in the dark about this, There is a website that you can sign on to for FREE at www.incidentpage.com Those of us who are dispatchers up will do our best to try and "dispatch" incidents of particular interest to you. You set up your account to receive whatever you want, whenever you want.. so if you only want to be notified of SWAT calls between 8am and 10pm then so be it. That dispatch and come to your regular email or to an alphanumeric pager if it can be accessed with an email address, and most can.

447. 7 Prison Escapees poss robbed Fireworks Stand

RRPD went with Nextel to replace their normal cell service. I know the patrol officers have them and use them to talk when they don't want to be on the radio (be it for security purposes or just chit-chat that doesn't belong on the radio). They do enjoy to "radio-like" features of the phone. The interesting point is dispatch has one to use (just in case). The patrol officers have the phones so they can be more accessible to the public. They have started to call people on certain calls where an officer presence is not needed (i.e. someone looking for advice).

It was interesting to hear one of the dispatchers being worried about someone hearing her conversations on the Nextel. She wanted to go back to the Talk instead (I did point out that it was easier for me to monitor them on Talk than the Nextel).

Well I don't get it.. if the Nextel works so good for Round Rock, then why not use it for dispatching their calls. I guess they got suckered into this Motorola deal and were wishing they had perhaps shopped around a bit more. I have seen a lot of Nextel in use and when it works, it works well but there are still deadspots and the radios look too much like cell phones.

459. Re: RRPD and Nextel

Yahoo group: CenTexComm

Topic: 456 Message: 459

I think it was more that their old phone contract expired and they got a better deal thru
Nextel. They have been on the 800 system longer than I have lived in Round Rock (4.5 years) so I don't think that is too much of an issue. But I obviously was not around
when Round Rock (and the county) made the switch to 800MH, so I can't comment on the buying decision. It has its quirks but it works.

There are some Nextel dead spots, especially as you get away from the IH35 corridor. I don't think the officers want to rely on it for dispatching - no emergency button on

those little phones and I am not too sure how the phone would survive a wrestling match with a subject. I have seen the handhelds get dropped, thrown, and wacked - and they still keep working.

Topic: 464 Message: 465

About the Williamson County groups:
3248 - Call 1: This is for the west side of the county
3280 - Call 2: This is for the east side of the county

I have no idea of what their idea of east and west side; I haven't really needed to figure it out. They have in the past used both Call 1 and Call 2 for dispatch. I have also heard them dispatching only from Call 1. I think this may have to do with the number of dispatchers that are working on a given shift and/or the level of traffic.

The 3264 group I am not sure of. I have been running Trunker on the Williamson County system for over a year now and haven't had that one show up (I have left it on for over a week just to see what came up during the day and late night). This group is also 16 above the 3248 and only 16 below the 3280. From what I can tell, the Williamson County system has most groups seperated by 32.

HB1148 dealing with antennas and county jurisdiction is presently in the county affairs committee. One of our local reps is a member of this committee, Warren Chisum from Pampa. For full text of the bill go to http://www.capitol.state.tx.us/tlo/billnbr.htm and do a search for HB1148. Your e-mail, call or letter can make a difference. Please write, fax, e-mail, or call your polite support to him and other contacts below. Time is of essence. It doesn't have to be anything elaborate, just let them know that you are aware of the bill and cite some of the implications of the bills passage along with what we do as hams with emergancy communications and skywarn. This bill not only affects you at your home station, but also repeater sites, etc. It also limets home satelite dishes.

I'll get some links up and more information on the NWTX ARES web page at www.qsl.net/nwtx-ares

Please pass this on to other hams and interested parties around the state.

Actually, Dell hires off-duty officers to patrol the parking lots 24/7. Dell Security deals with inside the buildings, the off-duty RRPD officer will deal with external issues (at the Round Rock facilities only). It is considered a good deal to get this detail, so you will hear alot of Captains, Lts, and Sgts out there (seniority does have its perks).

The officer will use his normal radio id while working Dell. You can hear them change shifts (one unit 10-41, another 10-42) at 7am, 3pm, and 11pm.

If something happens in Round Rock, especially down south, you will hear the officer at Dell go on the call. This happens alot on Friday or Saturday night when something big goes down. The dispatchers will sometimes directly dispatch the officer at Dell to an emergency call, other times the officer decides he is closer, or bored :).

472. Austin Mardi Gras

Yahoo group: CenTexComm
Date: 2001-02-25 06:16:29 UTC
From: Robert Barker
Topic: 472 Message: 472

Well I'm listening to the Saturday Night Austin TX Mardi Gras Celebration.. The Police are desperately trying to relay info to get EMS to come to them.. but alas.. they must go through the APD dispatcher, having them type a CAD message waiting for a reply and having EMS dispatcher relay to their units.. Time is being lost between the back and forth communication from the PD walking beat officer to the EMS crews. In the olden days, they would at least have a command Post on 5th street and relay the info across a table to each other allowing each agency's dispatcher to actually hear the other agency's radio communications, but they decided not to do that anymore and try to run it all from the Main police station. Seems like the situation is getting worse.. It's easier if an officer needs EMS to grab a cell phone, call 911 and ask for EMS themselves. Somehow all the fancy communications just fell apart and is not being used correctly.

It's just now midnight and the APD officers are screaming for EMS to please come to their location and are watching EMS crews head the opposite direction not understanding what they are responding on. Communications are terrible. No direct communication between APD, EMS, AFD and other units there helping out like TABC. It's kinda sad that the communications thing is getting worse. EMS isn't even using a special frequency like they usually use in big events. They are working the whole city on on Frequency. 460.975

I don't know if getting a new radio system with talkgroups will help the situation.. It could help if they were all on the same channel or if they could just switch over to their channel and ask for help. But somehow I just don't see that happening, no matter how much money they spend. Right now APD could switch over to an EMS channel and ask for help but the frequencies are not programmed in their radios.. Shame Shame. !!

APD is using Ch 7 460.025
TABC is on 156.060 and 154.905 is their ch 2. They are working young kids trying to buy beer and they were also at Erwin Center Friday night during the Boxing Match.
EMS is on 462.975
EMS and Fire do communicate together on 453.500 but it's very busy and they need another ch.

If you are missing it all tonight.. don't worry .. it all happens again Tuesday night.

473. Off Duty APD officer not expected to live

Yahoo group: CenTexComm
Date: 2001-03-04 15:33:18 UTC
From: Robert Barker
Topic: 473 Message: 473

FOR IMMEDIATE RELEASE
March 4, 2001
Contact: Public Information Office, 512-974-5017

Off-Duty APD Officer Injured
At approximately 2:30 a.m. on Sunday, March 4, the Austin Police Department received a 9-1-1 call of a possible traffic collision in the 2500 block of Elmont Drive. When responding officers arrived they discovered an off-duty APD officer unconscious in the roadway.

Austin EMS transported the officer to Brackenridge Hospital where he underwent surgery. Jose Reyes, a 12-year veteran, is listed in critical condition at this time.

Detectives are currently investigating this incident. They are interviewing possible witnesses to determine what took place and to identify a possible suspect or witness vehicle.

Homicide detectives are asking anyone with information surrounding this case to call the APD Homicide Tip Line at 477-3588 or CrimeStoppers at 472-TIPS (8477). CrimeStoppers is also offering a $1000 reward for information that leads to the arrest of a suspect or suspects.

The Homicide unit was out there all night doing an investigation. This appears to be intentional and the officer may have been beaten. He has never regained consciousness. He was a Frank 200 Unit who was not in uniform. when it happened.

475. critical air helo

Yahoo group: CenTexComm

Topic: 475 Message: 476

Critical Air medical Helicopter in Austin is on 460.825
They do have their dispatcher in California and it's funny cuz when they give the times, they are 2 hours behind our time.

But they have other frequencies: for La Grange, and for San Antonio. The pilot told me they were programmed in the helicopter but didn't know them at the time. Chris, perhaps next time you are at the hospital you can get the pilot to give us the other frequenices. She had to go out to the helicopter and get it for me off the display.

477. 2 Pursuits

Yahoo group: CenTexComm
Date: 2001-03-15 05:39:24 UTC
From: Robert Barker
Topic: 477 Message: 477

Tonight DPS attempted to stop a Caddie on I35 He ran and they got into a pursuit.. Subject then bailed at an apartment complex at Yager and I-35. I heard the DPS officer on 154.680 out of breath trying to run after the suspects.. DPS immediately began to get more units to his location but only more DPS units.. There was no communication to Austin PD, no simulcast on Intercity to let APD know what's going on. Too much to pick up the phone and call an APD supervisor to ask for assistance.. Too much time is lost calling it in and then having that supervisor put it into text and then have it sit in a QUE waiting for it's priority call to come up. Besides is sounded like Edward sector was holding calls anyway.

Earlier today I heard an APD unit on Baker radio ask the dispatcher to call Brack Police and have them meet them in the emergency room where they already were.. Wouldn't it be easier if they just had a Brack Hospital Police Channel to switch to and call them directly.

Then last week Travis County SO got into a pursuit that started at Lamar and Parmer.. The suspect ran down Lamar to Braker, Braker over to I 35 back up I35 to Parmer (where he started) Travis County was just trying to rebroadcast the pursuit for THEIR officers and get more units out there. Might have helped had they simulcast the pursuit on 155.370 intercity. Might have also helped if Travis County, DPS and APD could all talk to each other. Perhaps someday. Problem is that each agency doesn't have time to make a phone call and type in a call and try and get someone to tell someone else what is going on.. too much delay in relaying and typing.. they need to be able to hear the pursuit directly like we do with our scanners.. If they could just rebroadcast the pursuit over 155.370 intercity and have the county, DPS monitor it .. and have a UHF frequency for APD to scan that is a simulcast of 155.370 or have the DPS dispatcher or (even me) be able to take an VHF pursuit and rebroadcast it on any APD tac channel then perhaps they c an all help each other out.
But the best way to do it is to have whatever agency is involved in the pursuit on their primary channel to start immediately rebroadcasting (simulcasting) the pursuit on the district's channel. No Changing channels and no "monitoring" of other channels cuz most are not always monitoring anything but their own department.

478. Natural Gas Leak Burnet Rd. and Merriltown

Yahoo group: CenTexComm
Date: 2001-03-27 03:18:53 UTC
From: Robert Barker
Topic: 478 Message: 478

Mass Confusion.. Apparently AFD has a Natural Gas leak in a field off Merriltown. They want APD to block off Merriltown.. But the message is not getting though.

1) AFD keeps telling their dispatcher over and over to tell APD to block off Merriltown
2) APD is saying on 460.100 that they do not know what AFD wants them to do and is requesting more units and a Sgt., they think that they want Burnet Rd. shut down. There are about 4 APD units there not knowing what they need. Apparently APD dispatch is too busy to relay the info or is getting confused as to the question being asked.
3) DPS is also there .. on 154.680 telling their dispatcher that they are also there and do not know what they are needed for.. They are asking their dispatcher if he can try and figure out what AFD wants. They too got word that Burnet Rd. needed to be shut down.
4) Pflugerville FD is there and they have no communication with AFD. . I don't know why their 153.950 is not working but they too are trying to figure out where they are needed.
5) TCSO is also there and just as confused as APD. They were told all the roads need to be shut down but not sure which ones and why.

I have been listening to this ordeal play out on the scanner for the last 20 minutes. I could go over there in my car and do a better relay than they all have.. it's amazing that most of these guys have MDT's but noone can talk to each other.. APD doesn't know how to talk to AFD. Travis County units do not know how to talk to APD. The dispatchers are too buy to relay the information and information is getting lost between unit-dispatcher-cad message-fire dispatcher-fire unit. One Female APD unit is on the cell phone calling 911 trying to talk to the AFD dispatchers to see if they can tell them what they need. She is very upset and now asking the Sgt to call her cell phone.

After about 20 minutes AFD finally gives up and leaves.. and all the other units are finally getting the word.. Now APD has calls that have been holding for over 30 minutes.

482. Williamson County Talk Groups

Yahoo group: CenTexComm

From: Robert Barker
Topic: 26 Message: 482

I was at some festival in Georgetown over the weekend and found the following talkgroups.
784 was PD Tac 3 used at a Soccer Game I suspect this is Georgetown PD Tac 3
1232 was Georgetown Tac 5

I'm also not fully understanding how they do it when Round Rock fire has an EMS call they patch Scene something with Fire tac something.

483. Re: Williamson County Talk Groups

Yahoo group: CenTexComm
Date: 2001-04-14 02:29:51 UTC
From: George Joos
Topic: 26 Message: 483

Whenever Round Rock has an EMS call, they will automatically dispatch Fire to the scene. The dispatcher will then call Williamson County via a dedicated landline to advise them of the EMS call. Williamson County will then dispatch EMS and give Round Rock the Scene talk group. RR Dispatch will then patch the appropriate Fire TAC group with the EMS Scene group.

This allows FD and EMS to talk to each other while enroute. FD sometimes gets to the scene first and will update EMS on the patient conditions.

George

George, do you have a list of what RR Fire Tac goes with what Williamson Co EMS scene talk group or it is random every time? How many Fire tac groups are there and how many EMS scene groups are there?

I have:

2128 RR Fire Tac 1/Scene 2
2160 RR Fire Tac 2
2192 RR Fire Tac 3

3952 WC EMS Scene 1
2032 WC EMS Scene 2?

From: George Joos
Topic: 26 Message: 487

There is no set plan for assigning RR Fire Tac to an EMS scene group. The EMS scene groups are used throughout the county. For example, Georgetown fire will patch their fire tac group to the appropriate EMS scene goup.

The only group that I know of that you did not list is 4336 EMS Scene 4. I have not verbally heard a scene 3 get assigned so I can not confirm it is actually assigned. Some time I will have to pay more attention on a busy night to see if it is used.

The 2128 is RR Fire TAC 1 (only). Round Fire assigns TAC groups in order a call is dispatched (i.e. first one gets TAC1, and so on).

I finally had a few quiet moments tonight to pull off
my group file from Trunker and get it sorted out (perl
to the rescue). Feel free to use this info, but please
give credit if you are posting/emailing the info.

This group file is the result of over a year of monitoring
with Trunker the Williamson County 800 MHZ system. There are
many goups listed as "?". These groups were most likely caught
when I left Trunker running unattended and was not around to
hear info about the group being used.

At some point I will cross reference my grp file with my
ids file to see if I can figure out some from that.

Enjoy,

George

496. AFD on 154.175

Yahoo group: CenTexComm
Date: 2001-05-06 01:06:07 UTC
From: Robert Barker
Topic: 496 Message: 496

I found something weird last night.. I heard Austin Fire Dept give an unusual call sign and I indexed it with FCC and it's licensed to 154.175, which is Manchaca's frequency. So I put it in my scanner and lo and behold they paged out Oak Hill today for a "contract call" and told Oak Hill to respond on Fire Net.. Well Oak Hill did come up on Fire Net on 153.950. But the 154.175 seemed to only be for the initial page. I don't understand why they are not just paging out everything on 153.950 (154.235 input)

Does anyone have any new frequencies in the downtown area.. I'm looking for the new Bob Bullock Tx State History Museum and what frequencies are active at the new Central Booking off 10th street. I am hearing APD take prisoners to the old central booking still at times and I don't know why.

498. Bastrop County TRS

Yahoo group: CenTexComm
Date: 2001-05-06 21:37:44 UTC
From: Robert Barker
Topic: 498 Message: 498

That's interesting about Bastrop, I had not realize they were on a Trunked System. On Lindsay's Page it lists:
System Name: Bastrop County Public Safety System
Location: Bastrop County, TX
System Type: Motorola Type II Smartnet
Sysid 791c

In use by the Sheriff's Office in Bastrop County

System Frequencies:

Site-001
Primary
856.7125
857.7125*
858.7125*
859.7125*
860.7125*

Elgin Police is still on the LCRA system on talk groups 10-025 and 10-026. I'm trying to figure out the EMS/Fire County System. Fire or (first responders) seem to dispatch on 155.040. EMS (rual metro) is on 159.390.

From: ExLngHrn@aol.com
Topic: 500 Message: 500

Hello all,
I've started a new group for scanner listeners. It seems that most groups focus on the radio aspect of listening. My new group is called Austin Public Safety Monitoring (AustinPSMonitoring@yahoogroups.com) and focuses on such things as unit numbers and radio codes. I hope this fills a gap in scanner listening.
I look forward to seeing you joining the group.

Thanks,
Wes Ogilvie

503. Bastrop TRS Talk Groups

Yahoo group: CenTexComm
Date: 2001-05-08 18:10:48 UTC
From: Robert Barker
Topic: 503 Message: 503

For those keeping score I have now found 5 talkgroups on the 5 frequency system for Bastrop

3280 Patrol Supervisor
15984 seems to be radio techs

the ones already mentioned are:
3312 Bastrop SO (north?)
3344 Patrol 1 (tac channel and being referred to at P1)
3824 Patrol South

Interesting pursuit just occurred on Edward Radio 460.325. Motor 55 got into a pursuit and was yelling into his headset (helment mounted) and it was very hard to understand him.. They finally got the bad guy and now they are calling for EMS/Fire. But Fire Dept is driving in circles trying to find them (not direct radio contact). It's funny hearing all the officers telling the dispatcher to please tell Fire Dept to look over and see them under the 290/I35 bridge. You can even hear the sirens in the background and the officers keep saying they are driving in circles in the Shepler's Parking lot trying to find the officers. Apparently it was NOT a textbook pursuit. All the involved units are being told to come to the North Sub when they complete their booking.

506. RE: [CenTexComm] medic 25 / micu 1

Yahoo group: CenTexComm
Date: 2001-05-09 21:56:28 UTC
From: chrishowell
Topic: 506 Message: 506

m25 is the jonestown truck. it is currently staying at afd
station 34 at maconda park (620/183) until thier station is
finished. the ground ambulance for startflight is the old lago
vista fd ambulance. radio call is micu1. the on-duty flight crew
are only in that unit if the helo is down for weather.

once the lake austin/mopac station is built, rescue 3 is going to
move there from brackenridge. medic 17 will move into
brackenridge.

you probably started hearing "ems district 2" & "ems specops 4",
etc. a new district commander was added and existing commanders
renamed.

unit 30 is now ems district 1 (sw)
50 = ems district 2 (nw)
60 = ems district 3 (ne)
70 = ems specops 4 (rescue units, medic 8
(tactical/swat ambulance) & starflight)
80 = ems district 5 (se)

that's all the changes i know right now, chris

From: Robert Barker
Topic: 513 Message: 514

STARflight is dispatched by Austin EMS on 462.975. If they have a call in Travis County, they will talk to county EMS first responders on 155.715. Of course if they are in the air, and not in Austin, you can still perhaps hear them on the input 467.975 talking back to Austin EMS.. they have to give periodic location updates.

STARflight and all Austin EMS units talk to all Austin hospitals on 155.340.

STARflight also has 122.850 that they are supposed to do in-flight following on but they don't use it much except to talk to other helicopters like Critical Air and AirLife.

STAR stands for Shock Trauma Air Rescue, or something close to that.

522. Need help on the Federal TRS in Austin, TX

Yahoo group: CenTexComm
Date: 2001-05-14 21:01:46 UTC
From: Robert Barker
Topic: 522 Message: 522

Well I'm not sure too much about the system, and we, in Austin, welcome any help or suggestions from those who know about UHF trunking.

John Mayson found the control channel on 406.800 and of the ones he also had hits on, I heard what sounded like digital noises on 407.025 and 408.525 (same type noises on 460.075 used by Capitol PD), so this may (or may not) be part of this system

But why would the control channel be in the clear and the voice channels be digital? Is that common?
Also, we are just guessing about the offset being 25.0 as this seems to be the most common. Any way to confirm this? Also does the BASe have to be 406.000 or can it be 406.800

Today I'm hearing Barton Creek Mall using 464.375 AND 464.675. The .375 seems to be security and the
.675 is mainly maintenance.

Topic: 523 Message: 523

Sorry for all the postings but this is just too exciting for Austin. And we need some help if we are gonna figure this one out. I am guessing that this perhaps could be the Federal Prison in Bastrop, Tx
Since Seagoville Prison has offset of 12.5, I tried that and I'm getting the digital noise on several talkgroups:

16
240
336
411
496

I have no idea if this is correct. Can anyone help out? I have heard no voice transmissions at all. Just the control channel on 408.600 and I'm using the other frequencies John had hits on. Do I need to have all the frequencies for the system entered or just the one Control Freq.

527. uhf trunking and the pro-92

From: Donald Harkins
Topic: 527 Message: 527

I own a pro-92A and don't understand how to program it for uhf trunking. The manual says to program the base frequency in to ch 00 of the bank, then set the step, then program in all the trunking frequencies. I understand how to program trunking frequencies and set the step. My question is do you set the base frequency to mot like you do for all the other frequencies?

528. Federal TRS in Bastrop? Changes Control Channel

Yahoo group: CenTexComm
Date: 2001-05-15 14:09:12 UTC
From: Robert Barker
Topic: 528 Message: 528

Today the Control Channel has changed to 408.525, but I'm still getting hits on the talk groups.. and the 144 is the most popular talk group. This system is all digital. No voice at all.

Callsign: Unknown I very strongly suspect this is the Federal Prison in Bastrop
Base: 406.000 MHz
Offset: 12.5 kHz
Motorola ASTRO

406.800 (Monday's control channel)
406.525
408.525 (Tuesday's Control channel)
407.025
409.025

Talk groups: 16, 144, 240, 336, 411, 496, 16528

No big surprise I could not pick this up in north Round Rock
where I live. I did bring my radios to work today (Motorola
on Parmer between McNeil and 620) and I can not pick up the
signal either. I am not that far way from John with no hills or big
buildings in between, but I get nothing. Of course the buildings are
very radio nonfriendly.

If I get a chance at lunch I may put the stuff in the car and cruise
over by Solectron to see what I can pull in.

Topic: 546 Message: 546

I was visiting a friend of mine at the main police station last night when the storms hit. Right before the storms hit, one of the lieutenants came in due to a possible callup of personnel for the storm. We knew that storms were hitting the area very hard, but we really didn't have any idea as to injuries or public safety activity. At that point, I turned on my PRO-92 scanner which was programmed with all public safety frequencies for the city and county. From that, we managed to find out (from AFD, EMS, and APD dispatching) an idea as to the damage to the Tinsletown Theater in Pflugerville as well as several trailer parks in eastern Travis County. Also, by monitoring AFD communications, we got a good idea as to street flooding. I can't believe that for the all of the city's expenditures on public safety, nobody's thought to get a $200 scanner and load it with frequencies for all of the public safety agencies. You'd think there'd be a really good radio setup at the police station of all places, but if it hadn't been for the scanner, the best source of information down there would've been News 8 Austin.....

From: George Joos
Topic: 553 Message: 559

I tried to get it the other day and ran into 2 problems. The signal is very spotty and hard to hold onto. Then my laptop battery decided to die out on me. While it was working I could not hold onto the signal long enough to lock it in. John must be sitting in an ideal reception area for this signal.

I am on vacation this week, so I hope to get the laptop fixed up for another road trip. Maybe I will have better luck.

George

562. Re: [CenTexComm] HEAR in metro Austin

Yahoo group: CenTexComm
Date: 2001-05-30 19:53:41 UTC
From: Robert Barker
Topic: 562 Message: 562

John, Not sure what HEAR stands for but on 155.340 we seem to have the oldest system in Austin Tx.

NO PL's .. each ambulance just manually dials up a code using a rotary dial (it's so old it isn't even touch-tone) . Each hospital is assigned a different code and for Brackenridge.. they have Brack Crash or Brack Triage. It's so basic, and they have been using it since 1980's. Problem is that only one at a time can use the channel and it has limited high band range and usually STARflight doesn't have the dial up so Austin EMS dispatch will come up on this frequency and encode the hospital for them. Also every single ambulance wishing to talk to the hospital, has to encode them and it get very old after awhile. If we ever go trunked, maybe they can put each hospital on a different talkgroup like they do in Williamson County.

I heard North Hays Co EMS on LCRA talk group 15-143 (simulcast of 154.385) refer to patients as being Category 4? Would that possibly be a refusal? I thought you were either a Cat 1,2 or 3 (1 being the most serious)

563. Re: [CenTexComm] HEAR in metro Austin

Yahoo group: CenTexComm
Date: 2001-05-30 20:16:28 UTC
From: ExLngHrn@aol.com
Topic: 562 Message: 563

The following hospitals are on 155.34
Seton
Seton Northwest
Seton Southwest
St. David's
South Austin
North Austin (formerly Austin Diagnostic Medical Center)
Brackenridge Treatment (non-serious patients)
Brackenridge Crash (serious patients)
Brackenridge Children's Hospital
Heart Hospital of Austin

As for Category 4 for North Hays County EMS, I don't know what that means. Each EMS organization has different radio codes.

566. TABC and Jenna Bush

Yahoo group: CenTexComm
Date: 2001-06-01 04:22:55 UTC
From: Robert Barker
Topic: 566 Message: 566

To all the people that keep asking about TABC and Jenna Bush. I believe the latest incident at Chuy's on Barton Springs was handled strictly by APD. TABC was called but I think they referred the matter to APD at the time. TABC uses 156.060 and supposedly tac is 154.905. They can, however come up on any of the APD or TCSO channels. They will usually identify as TABC XX, such as TABC 14. Secret Service usually just stands outside of whatever establishment she is inside of. I have not heard any out of the ordinary Secret Service Traffic. They really don't have anyone to talk to.. just two agents who work shifts, with a cell phone.

After this 2nd incident I think they almost need to assign a permanent TABC agent to keep a watch on her. APD has been flooded with calls from news media all over the county about this incident. It has even downplayed the Yogurt Shop case.

Now supposedly there is a video out there of her drunk at a party, so only time will tell before he highest bidder airs it on the TV news.

From: Robert Barker
Topic: 568 Message: 568

I'm hearing Westlake PD tonight on 857.9375, not sure they ever left.

I did notice that Westlake FIRE is licensed for 856.9375 and 860.9375 but I'm still hearing them on 153.980.

The intention was to join the City of Austin when they go to their 800 Trunked system but Westlake had to go ahead and move to 800 due to "failing radios" according to the Austin Chronicle article, but the officers seem to get out just fine on 155.910 as a tac channel. Very Funny listening.

571. Re: [CenTexComm] LTR system in Austin

From: Donald Harkins
Topic: 573 Message: 575

I live in the San Antonio area. I also own a pro-92. Programming a fleet map is easy.
1. program all the frequencies for one site of the system in one bank, and set the mode to mo for all the frequencies
2. you need to slect a channel in the bank where you program your trunk system.
3. press program, then press trunk, then press funk and 8.
4. your radio should show s-__.
5. Here is where you program the fleet map. you program only the block codes that your radio ask you for.
6.after you type the code for block 0 press enter, then next block will come up and do the same thing for each of the block codes.
If you own the GRE Scanner Data Manager software I can email you my file for San Antonio.

Topic: 576 Message: 576

John,

Knew it existed, don't actively monitor it since it is the Ed
Bluestein site (and I work at Parmar). They have been using that
for quite a while to coordinate all the fab stuff, etc. On that site
it is "cool" to have a radio (almost as cool as the pagewriters).

Unfortunately Parmer doesn't have too much in the way of radios.
Security is on 467.350/462.350 but there really is no repeater
according to facilities. Supposedly the repeater is installed, but
there is no money to buy radios (and since we are not manufacturing,
we don't have problems -- oh, just ignore that funnel cloud out
the window).

From: Frank Jacks, Jr
Topic: 573 Message: 578

Mr Harkins,
Thanks for your help. Your one statement:
"you program only the block codes that your radio
asks you for" was the one thing that suddenly made
it all clear. I was punching S13 and then didn't understand
why it took me to block 4 and not to block 2. Thanks!!!
Since you are from the SA area, are there any frequencies
that you would specifically recommend for someone to listen
to while staying on the riverwalk. I've already programmed in
the pd, fd, ems, Alamodome, and Convention Center talkgroups.
Do you have any info on river center mall, the Marriott Rivercenter
Hotel, or other river walk frequencies!
Thanks, it all makes sense now!

580. 780's found at Dallas (Arlington) Hamcom this weekend

Yahoo group: CenTexComm
Date: 2001-06-09 04:35:53 UTC
From: sly.debbie@verizon.net
Topic: 580 Message: 580

Hello All:
I was at Hamcom 2001 today (Fri) and noticed a couple dealers there that have 780's. Norm Schrein with the Bearcat club is there and will have 2 units avail sometime Sat. His selling price is $375.
I also noticed the booth next to him (Am-Com?) had about 3-4 units also and their price was $369.
There poss could be some new venders show up tomorrow as Fri is not the busiest day.

Hamcom goes on until about midday Sun but don't know if these venders will be there thru this time--so in other words be there Sat if you want one.

Admission to the Ham fest is $9 and parking is $4

Whoops, your right. I didn't drill down enough in the FCC pages to see that. I saw the Ed Blue address. Well, no money to buy radios right now, no idea what plans they have. At our next evacuation training I will have to ask. In the mean time, I will have to plug these into my portable just to monitor to see if there is anything present.

I brought the old handheld (my trusty PRO-34) to work. Not much to
listen to on the TRS.

860.8375 is the control channel
The only other thing I heard is CWID on 854.7875

I am going to leave the freqs in the scanner, and if I every pick up
some traffic I will have to bring in the laptop.

587. DPS Helicopter 159.210

Yahoo group: CenTexComm
Date: 2001-06-20 02:31:42 UTC
From: Robert Barker
Topic: 587 Message: 587

I heard a DPS helicopter on 159.210 Simplex tonight. It's been a long time since I have heard DPS use this frequency simplex. They are working something but I can't hear the mobile unit. Possibly down south towards San Antonio.

This 159.210 is also a repeater relay for the New Braunfels area. DPS Austin transmits to it and the input is 154.665

589. City of Austin TX signs with TriTech for 911 system

Yahoo group: CenTexComm
Date: 2001-06-26 14:47:11 UTC
From: Robert Barker
Topic: 589 Message: 589

http://www2.tritech.com/internet/june_2001_3.asp

SAN DIEGO, CA (June 18, 2001) - Today, TriTech Software Systems, an international developer of 9-1-1 emergency computer-aided dispatch (CAD) and wireless applications for the public safety industry, signed a $7 million contract with the City of Austin, Texas to replace an aging 9-1-1 dispatching system with TriTech's VisiCAD emergency dispatching system. "TriTech is honored to have been chosen to supply the capital city of Texas with a new, state-of-the-art 9-1-1 dispatching system", said Chris Maloney, President of TriTech Software Systems. "The new system will help improve emergency response times and help streamline and coordinate multi-agency dispatching operations for the 1.1 million citizens of the Travis County area."

The City of Austin, Travis County and Texas Department of Transportation operations collectively answered over 1.7 million emergency calls in 2000, and project a call volume in excess of 2.6 million before the end of the decade. As part of the project, TriTech will provide its VisiCAD Command software as well as all training, implementation, integration, project management, network design and ongoing support.

"Our selection process spanned two years and included several thousand hours of research from our nine agency selection team", said Keith Simpson, City of Austin Project Manager. "Choosing the best 9-1-1 dispatching system for our city is a tremendous responsibility. We scrutinized many proposals from the nation's top 9-1-1 dispatching system providers and selected TriTech because of the robustness of the product and because we were confident of TriTech's commitment to achieving a successful implementation and long-term client relationship. We believe we have chosen the best possible solution for our citizens and that VisiCAD's integrated geo-based technology will allow our call-takers and dispatchers to have more information at their fingertips and become much more efficient."

The VisiCAD project will encompass dispatch operations for the City of Austin Police Department, City of Austin Fire Department, Travis County Sheriff's Office, Texas Department of Transportation, the Austin/Travis County Emergency Medical Services (paramedic) Department and the Austin-Bergstrom International Airport. The project also marks a marriage between public safety and transportation dispatching. Through participation of the Texas Department of Transportation and unique integration to be developed by TriTech, routing of emergency services vehicles will be based on real-time traffic data derived from highway sensors. "For the first time, TriTech's VisiCAD system will allow us to build an integrated multi-site Law Enforcement, Fire and Paramedic emergency dispatching system for the central Texas area", said Kelley Cook, Assistant Communications Manager for the Austin Police Department.

TriTech will also integrate its VisiCAD system with a variety of external systems including E-9-1-1, Mobile Data, Police and Fire/EMS Records Management, the Texas Law Enforcement Telecommunications System and various other systems, databases and applications. "There aren't many emergency dispatch system providers who could handle a project of this magnitude", said Chris Maloney. "Building and deploying an integrated multi-site, multi-agency dispatching system is complicated, requiring extensive project management and technical expertise. However, over the past ten years, TriTech has successfully deployed systems of similar scope and we are excited to have an opportunity to do the same for Austin."

Headquartered in San Diego, TriTech Software Systems develops, markets and implements advanced computer software technology for law enforcement, fire and emergency medical services, and has deployed more than 125 systems in six countries. Its flagship product, VisiCAD CommandT, is a Windows-NT, mapping-based 9-1-1 emergency dispatching system engineered to meet the life-critical requirements of emergency, public safety dispatching organizations.

Cedar Park Trunked System: 856.7625, 857.7375, 858.7625, 859.9375, 860.7375
I programmed it in as Motorola Type II and I'm getting the dash showing confirmation of receiving the control channel but not picking up any talkgroups. yet. I'm still hearing regular routine police traffic on 155.085

Right now the contol channel is 859.9375

I was also hearing a Williamson County talkgroup on 4272 yesterday. But today I'm hearing them on 3248. Who knows who this is. It might have been a patch. Yesterday they had a big grass fire in Jarrell and they were patching all sorts of stuff together.

604. Fredericksburg Using LCRA system.

Yahoo group: CenTexComm
Date: 2001-07-12 13:30:25 UTC
From: Robert Barker
Topic: 604 Message: 604

The information I posted on LCRA users was off this full article published in a local paper. I have cut and pasted the whole article.

FREDERICKSBURG STANDARD-RADIO POST- WED., JULY 11, 2001

Community `Safer' Due To New Radios

LCRA System Favored By Local Law Enforcement Officials

Fredericksburg's population has reached 9,000, and there are times when the community is fairly bulging with 10,000--15,000 visitors. But Police Chief Paul Oestreich says, thanks to an advanced two-way radio telecommunication system, the Gillespie County community is as safe as ever.

"It's safer now, no doubt about it," said Chief Oestreich.

In the past two years, the City of Fredericksburg and Gillespie County have been using a system developed by the Lower Colorado River Authority, replacing a one-channel, low-frequency VHF system with a multi-channel 900-Mhz frequency band.

County and city officers under Chief Oestreich and Sheriff Milton Jung must cover a wide area of the Hill Country, a region where cell phone service can be "iffy".

"With this radio system, I've been in Houston and talked directly to Fredericksburg," Chief Oestreich said. "Before, that was never possible."

Chief Oestreich and officers on the streets have been pleased that the expanded frequency band minimizes "skip", a phenomenon in low-frequency bands in which radio transmissions may interfere with other broadcasts on the same band hundreds of miles away.

LCRA installed its radio system in 1997 mainly to upgrade communications among its power generating facilities and other operations in a 58-county service area in Central Texas. When offered use of the system by the LCRA, Fredericksburg and Gillespie County joined a growing number of public organizations that have chosen to participate.

The backbone of the new system is a network of 34 towers spanning a broad region from Junction to Bay City. The City of Fredericksburg is building another tower, just behind the local hospital, said Boyd Harper, LCRA's telecom representative. The tower will be outfitted by LCRA with the proper equipment.

By routing signals tower-to-tower, the system reduces the size and number of "dead" areas where users cannot send or receive transmissions, Harper said.

Tapping into LCRA's radio system, users find they save thousands of dollars that otherwise would have been spent in constructing and maintaining a new system of their own.

As local demand grows for public services, gaps in communication could pose a potential hazard for local residents in need. Not in Fredericksburg, said Chief Oestreich.

A new mobile data processing system, which allows an officer to run a license check from his
vehicle in less than 30 seconds, has cut response time and increased reliability in communications.
"I always thought mobile data (processing) was for big cities," Chief Oestreich said. "I figured it was too expensive for small agencies. If you had told me three years ago that we would be running mobile data in our cars, I would have said you were nuts."

Residents in neighboring Comal and Kendall counties have been pleasantly surprised, too, said Boerne Police Chief Gary Miller.

In Boerne, winds estimated at 60-70 mph struck in the predawn hours of May 28. Locals awoke to a grim scene: Tree limbs blocking streets, fences lying flat, windows shattered, phone lines sagging on rooftops, entire neighborhoods without electricity.

People needed help straight - away.

Responding to the need, Kendall County's public safety and rescue agencies generated 6,800 calls, testing but not overloading a system similar to that in New Braunfels. Chief Miller said he shudders to think of what might have happened with the old system.

"We would have been in real big trouble," he said, adding, "With the outdated radio connections, there was only one VHF frequency for all law enforcement in the county. There was no way to handle all that call traffic."

As the recent storm in Kendall County proved, LCRA's system not only can withstand high transmission volume, but it also can provide safety personnel with instant, uninterrupted connections in hilly areas where cell phone service can be dicey.

The modern system, which includes fiber optics and digital transmissions, provides huge capacity for voice and data communications. Users may talk or send digital data simultaneously, said Steve Zoromsky, LCRA manager of telecommunications business development.

"The system has worked perfectly," Chief Miller said. "It made this town and this county a safer place to live."

Other LCRA telecommunications users are the City of Elgin (police, utilities), City of Flatonia (police), City of San Marcos (fire, public works), City of Fredericksburg (police), Fair Oaks Ranch (police), San Marcos Electric, Bluebonnet Electric Co-op, San Marcos/Hays County EMS, Kyle

EMS, University of Texas, M.D. Anderson Research (police), Southwest Texas State University.

Also, Capital Area Rural Transit System (CARTS), Colorado Valley Transit, 969 Fire Department, Texas Department of Transportation (Austin), Central Texas Medical Center (San Marcos), Kendall
County (sheriff, DPS), Gillespie County (sheriff, EMS), City of Kerrville (police), South Hays Fire Department, Kimble County (sheriff) Fayette sheriff) and Capitol Metro in Austin

Subject: [CenTexComm] Fredericksburg Using LCRA system.

The information I posted on LCRA users was off this full article published
in a local paper. I have cut and pasted the whole article.

FREDERICKSBURG STANDARD-RADIO POST- WED., JULY 11, 2001

Community `Safer' Due To New Radios

LCRA System Favored By Local Law Enforcement Officials

Fredericksburg's population has reached 9,000, and there are times when the
community is fairly bulging with 10,000--15,000 visitors. But Police Chief
Paul Oestreich says, thanks to an advanced two-way radio telecommunication
system, the Gillespie County community is as safe as ever.

"It's safer now, no doubt about it," said Chief Oestreich.

In the past two years, the City of Fredericksburg and Gillespie County have
been using a system developed by the Lower Colorado River Authority,
replacing a one-channel, low-frequency VHF system with a multi-channel
900-Mhz frequency band.

County and city officers under Chief Oestreich and Sheriff Milton Jung must
cover a wide area of the Hill Country, a region where cell phone service can
be "iffy".

"With this radio system, I've been in Houston and talked directly to
Fredericksburg," Chief Oestreich said. "Before, that was never possible."

Chief Oestreich and officers on the streets have been pleased that the
expanded frequency band minimizes "skip", a phenomenon in low-frequency

bands in which radio transmissions may interfere with other broadcasts on
the same band hundreds of miles away.

LCRA installed its radio system in 1997 mainly to upgrade communications
among its power generating facilities and other operations in a 58-county
service area in Central Texas. When offered use of the system by the LCRA,
Fredericksburg and Gillespie County joined a growing number of public
organizations that have chosen to participate.

The backbone of the new system is a network of 34 towers spanning a broad
region from Junction to Bay City. The City of Fredericksburg is building
another tower, just behind the local hospital, said Boyd Harper, LCRA's
telecom representative. The tower will be outfitted by LCRA with the proper
equipment.

By routing signals tower-to-tower, the system reduces the size and number of
"dead" areas where users cannot send or receive transmissions, Harper
said.

Tapping into LCRA's radio system, users find they save thousands of dollars
that otherwise would have been spent in constructing and maintaining a new
system of their own.

As local demand grows for public services, gaps in communication could pose
a potential hazard for local residents in need. Not in Fredericksburg, said
Chief Oestreich.

A new mobile data processing system, which allows an officer to run a
license check from his
vehicle in less than 30 seconds, has cut response time and increased
reliability in communications.
"I always thought mobile data (processing) was for big cities," Chief
Oestreich said. "I figured it was too expensive for small agencies. If you
had told me three years ago that we would be running mobile data in our
cars, I would have said you were nuts."

Residents in neighboring Comal and Kendall counties have been pleasantly
surprised, too, said Boerne Police Chief Gary Miller.

In Boerne, winds estimated at 60-70 mph struck in the predawn hours of
May

28. Locals awoke to a grim scene: Tree limbs blocking streets, fences lying
flat, windows shattered, phone lines sagging on rooftops, entire neighborhoods without electricity.

People needed help straight - away.

Responding to the need, Kendall County's public safety and rescue agencies
generated 6,800 calls, testing but not overloading a system similar to that
in New Braunfels. Chief Miller said he shudders to think of what might have
happened with the old system.

"We would have been in real big trouble," he said, adding, "With the outdated radio connections, there was only one VHF frequency for all law enforcement in the county. There was no way to handle all that call traffic."

As the recent storm in Kendall County proved, LCRA's system not only can withstand high transmission volume, but it also can provide safety personnel
with instant, uninterrupted connections in hilly areas where cell phone service can be dicey.

The modern system, which includes fiber optics and digital transmissions,
provides huge capacity for voice and data communications. Users may talk or
send digital data simultaneously, said Steve Zoromsky, LCRA manager of telecommunications business development.

"The system has worked perfectly," Chief Miller said. "It made this town and
this county a safer place to live."

Other LCRA telecommunications users are the City of Elgin (police, utilities), City of Flatonia (police), City of San Marcos (fire, public works), City of Fredericksburg (police), Fair Oaks Ranch (police), San Marcos Electric, Bluebonnet Electric Co-op, San Marcos/Hays County EMS, Kyle
EMS, University of Texas, M.D. Anderson Research (police), Southwest Texas
State University.

Also, Capital Area Rural Transit System (CARTS), Colorado Valley Transit,
969 Fire Department, Texas Department of Transportation (Austin), Central
Texas Medical Center (San Marcos), Kendall
County (sheriff, DPS), Gillespie County (sheriff, EMS), City of

Kerrville
(police), South Hays Fire Department, Kimble County (sheriff) Fayette
sheriff) and Capitol Metro in Austin

610. SAFES EMS was renamed to Schertz EMS

Yahoo group: CenTexComm
Date: 2001-07-17 05:01:44 UTC
From: Donald Harkins
Topic: 610 Message: 610

I have heard SAFES EMS being called Schertz EMS today. I am updating my site with the change. SAFES EMS was incorporated with the City of Schertz few years ago. Last year they merge with the Fire and Police department to build a complex for all of the emergency services for the City. Schertz EMS covers Schertz, Universal City, Live Oak, Selma, Bracken, ST. Hedwick and Marion.

611. Identified some ids on LCRA

Yahoo group: CenTexComm

612. Cedar Park Trunked System Update, Animal Cntl, Elgin, Critial Air

Yahoo group: CenTexComm
Date: 2001-07-21 17:11:12 UTC
From: Robert Barker
Topic: 612 Message: 612

Yesterday, on Friday they were continuing to play with the new Cedar Park Trunked System. For the first time I was monitoring a simulcast of the radio traffic from 155.085 on the system. It was on a talk group in the 3200's which is probably only a test talkgroup. Also heard radio techs doing a lot of on air counting and testing of radios and mentioning where they were. The simulcast started about 5pm but the whole system and control channel were taken down later in the evening.

Cedar Park Trunked System: 856.7625, 857.7375, 858.7625, 859.9375, 860.7375

On an unrelated matter, the Animal Control (dogcatcher) people were in my neighborhood the other day and they were chasing a dog on simplex 155.925. I didn't realize they had this capability. Interesting.

Next weekend, Elgin is having their "Western Days" event. I'm told they will be using LCRA radios for the event so there might be some new talkgroups pop up.

I've noticed that Critical Air 11 460.825 seems to be moving out to Marble Falls during the day. They are based at the Marble Falls Fire Dept and then come back to Austin at night. Seems like there is a lot of issue lately with helicopter parking. APD is about to get their new helicopter but can't find a place to park it. It may end up at Bergstrom which is a bad idea since they would be delayed by other air traffic if they needed a quick response somewhere.

613. Austin 800 mhz update

Yahoo group: CenTexComm
Date: 2001-07-21 18:35:07 UTC
From: ExLngHrn@aol.com
Topic: 613 Message: 613

Just a quick update on the Austin 800 mhz system from an AFD newsletter. Final plans are ongoing to locate the tower sites. Also, fleet mapping (deciding the number and types of talkgroups) is underway. AFD is expected to cut over to the system in the summer of 2003.

614. San Antonio Area Temp Inversion this morning

Yahoo group: CenTexComm
Date: 2001-07-23 20:17:06 UTC
From: Lindsay C. Blanton
Topic: 614 Message: 614

Here in San Antonio, we had a great temp inversion this morning which led to lots of great DX in the 450 and 800 MHz bands. To take advantage of the skip, you've gotta get up early, but it is well worth it.

This morning between 6:15 am and 8:00am I logged the following systems on 800 MHz:

Sysid 7a05 on 858.3625 (Not Known)
Sysid unid on 860.8625 (APCO-25 9.6K Control Channel - Not Known)
Sysid unid on 859.8625 (APCO-25 9.6K Control Channel - Not Known)
Sysid 4f37 on 867.8125 (Brazoria County TX Public Safety)
Sysid 6e3a on 866.3500 (Caldwell County TX Public Safety)
Sysid 2318 on 868.0875 (Harris County TX Smartzone Site-5)
Sysid 2318 on 866.1000 (Harris County TX Smartzone Site-7)
Sysid 6d3f on 859.9125 (Not Known)
Sysid 003c on 855.9125 (HPL / Reliant Energy Trunked Radio System)
Sysid 791c on 857.7125 (Bastrop County TX Public Safety)

Also logged the following EDACS Control Channels:

859.3125 (prob AEP)
856.4125 (prob AEP)
856.3125 (prob AEP)
858.3875 (prob AEP)
857.3875 (prob AEP)

Not bad from San Antonio...

615. What Frequencies Do You Listen Too

Yahoo group: CenTexComm
Date: 2001-07-27 19:51:45 UTC
From: Frank Jacks, Jr
Topic: 615 Message: 615

Greetings all,
I've been involved in the scanner hobby for about a year
or so now. I have a RS Pro-92 scanner. I live in Northwest
Austin in the LakeCreek Mall 183-620 area and work across
the street from the capitol downtown. I was wondering if
anyone out there would like to share what frequencies are
programmed into their scanners.
Someone else might be listening to something that I
have never even thought of, plus I've got alot of channels
that I'm not using and might like to try something new.
I'll start off:

617. What Frequencies Do You Listen Too

Yahoo group: CenTexComm
Date: 2001-07-27 21:03:08 UTC
From: Robert Barker
Topic: 615 Message: 617

Hey there Frank, a few notes that might clear up some things:

006 Lakeway Fire 154.4450 *this is actually the Hudson Bend Fire Dept.
007 AFD Dispatch 453.2750 Firecom 7
015 APD 11 rangers 460.3750 The downtown rangers are now on 453.2375.. this is APD Ch 11 Narcotics
201 Capitol DPS 155.4450 This is the repeater output to 154.695
202 Capitol DPS 154.6950
203 State 460.1250 Mostly all Digital
204 State 460.2250 Still haven't identified what buildings this is or if it's all the state buildings.
315 AFD 453.6750 Firecom 6
316 AFD 453.4500 Firecom 5 or Alarm 5
317 AFD 453.8000 Never was used.. it interfered with other radios.
320 EMS ??? 462.9500 Austin EMS Ch 9 or Ch 2 depending no the radio setup
336 Fire 453.1000 Firecom 4

You might considering listening to:

460.825 Critical Air medical Helicopter, also hearing reports of them on 460.675 but this might be the La Grange repeater
460.475 APD Ch 12.. not as popular but still good. This is officially Info 3 (Info 1 is 460.025 and Info 2 is 460.500)
153.950 Fire Net .. very active with all these grass/brush fires
453.575 Austin City Parks Tactical.. used a lot by parks police
156.060 TABC hot on the trail of Jenna Bush and other alcohol violators
154.680 DPS mobiles to hear the troopers near you running traffic.. yes boring but sometimes worth it. (base is really boring on 155.460)
459.900 Firecom 6 being used more and more as a 2nd FireMed frequency
464.025 Downtown Horse Carriages.. very very interesting to listen to on Friday and Saturday nights.
122.850 Starflight Flight Following.. not sure how much they use this.
149.625 Camp Mabry Security

Also the Cedar Park Trunked System is being tested daily
Cedar Park Trunked System: 856.7625, 857.7375, 858.7625, 859.9375, 860.7375

618. RE: [CenTexComm] What Frequencies Do You Listen Too

From: Chris Howell
Topic: 615 Message: 618

320 EMS ??? 462.9500 Austin EMS Ch 9 or Ch 2 depending no the
radio setup

[Chris Howell] supposed to be ch 2 on all radios, some of us old-timers
still refer to it as ch 9 every once in a while.

459.900 Firecom 6 being used more and more as a 2nd FireMed frequency
[Chris Howell] firecom 6 is for pinin's and other rescue's. firemed3 is
still for medical responses

621. The Hays Co Fire

Yahoo group: CenTexComm
Date: 2001-08-08 03:52:55 UTC
From: Robert Barker
Topic: 621 Message: 621

Hearing lots of radio traffic from the Hays Co fire.. Tonight they are using LCRA talkgroup 02-004 which they are calling LCRA Comm 1. New Braunfels fire units are talking to Hays co fire units. And I'm hearing this off the Austin tower so someone up here is tuned in and listening.

This fire has been burning for 2 days.. every few hours they seem to think they have it under control and then the wind picks back up and it gets out of control again. They said both the Austin STARflight helicopters have been rigged with Bambi buckets and worked all day at the fire scene. At one point they even evacuated a subdivision of 50-100 homes.

I have also heard San Marcos EMS on 04-061 and Additional Hays Co fire units on 04-141 which is a simulcast of the N. Hays Co fire Channel 154.385

622. South TX freqs

Looking for freqs, trunking freqs and id's for Cameron Co. TX
(Brownville,S.Padre Island).
I've been doing some searches, found some info but its kinda sparse.
Anybody have or know of freqs for this area (county sheriff, s padre
island, border patrol, city of brownville, etc) ?
Be going there soon, will report back with findings after returning but
looking for some good primers for the area.
Sly

624. 159.39 and 159.375 Tx Forest Service

Yahoo group: CenTexComm
Date: 2001-08-13 15:54:28 UTC
From: Robert Barker
Topic: 624 Message: 624

Yesterday from Lago Vista I was hearing traffic between a remote transmitter and an aircraft, It was repeater traffic and the base was identifying as "Lufkin" so I figured this most be the Texas Forest Service and a spotter Aircraft. Both repeaters were very clear. The aircraft was north of Abilene.

The repeater on 159.390 may or may not be the same as the N. Shore Fire and Rescue primary on the same frequency. But it could also be in place (as listed by the FCC) near the Balcones Canyonlands just beyond Lago Vista towards Marble Falls.

This is a pretty neat video about radio problems.

Thanks to Harry Marnell (www.qsl.net/n6uru/WhyCantWeTalk.htm) and FireRadio@yahoogroups for this. While the video is primarily about interoperability, I think it vividly points out the need for clear, interference-free spectrum - which is what 800 Mhz trunked radio was supposed to offer public safety.

Why Can't We Talk When Lives are at Stake?

From: Chris Howell
Topic: 290 Message: 628

m17 is a "full-time" demand unit, working wed/thurs 1p-1a and fri/sat 4p-4a in the downtown area. m26 is another demand unit that is filled with overtime on a voluntary basis. they are 12 hour shifts as well, covering the south austin area. both units are going to be changing radio call signs from "medic 17/26" to "demand 17/26".

also, m17 is due to get the first of the new units that is to hit the streets sometime in sept. the new units are the same as what is out there except that they are colored a lime-green, the same green as on the new school zone signs.

631. THE AUSTIN DISTRICT COURTESY PATROL

Yahoo group: CenTexComm
Date: 2001-08-30 15:19:00 UTC
From: Robert Barker
Topic: 631 Message: 631

I got this from the TxDot Website. TxDot Courtesy Patrol for Austin works off the LCRA's 900 Mhz system but they also have low band radios on the 47.08, 47.06, 47.12 and 47.18. I'm also told TxDot uses Nextel.

THE AUSTIN DISTRICT COURTESY PATROL
The Austin District Courtesy Patrol generally operates weekdays between the hours of 6:30 AM and 10:00 PM. During rush hours, the patrol only operates on Interstate 35. The patrol operates in the Austin Metro area and does not cover San Marcos, Round Rock or Georgetown.

If you need the Courtesy Patrol you may call:
8:00 AM ? 5:00 PM: (512) 832-7310
After Hours: Dial 911

What the Austin Courtesy Patrol Does:
Remove stalled vehicles from traffic
Provide two gallons of gasoline at no charge
Provide water for radiator
Provide cellular phone for motorists to call for assistance
Provide booster cable start
Change flat tire

What the Austin Courtesy Patrol Does Not Do:
Make mechanical repairs
Make house calls
Recommend a mechanic or towing service
Respond to vehicles in parking lots
Respond to vehicles on city streets?the patrol is restricted to state maintained highways only.

The Patrol?s primary job is incident management. If asked to assist with traffic control by the Austin Police Department, such a request will take priority over motorist assistance.

George

Police to get upgrades for dispatch system
By KATHRYN CULVER
Leader Staff
The Round Rock Police Department is looking to invest $1.2 million in an improved dispatch system that will provide officers with greater access to information while they are on the streets.

Round Rock Police Chief Paul Conner said the new system, which will include laptop computers for the patrol cars and a global positioning satellite, will bring the city up to date with other cities similar in size.

"We've been talking about this for four or five years," Conner said. "We hired consultants to determine what our needs are."

Cities such as Killeen, Waco, Temple and College Station are already using the technology-enhanced law enforcement systems that Conner is planning to install.

"Today, you wouldn't consider putting an employee at a desk without a telephone and computer," Conner said, stressing the importance that officers need computers as well.
The new system will enhance the department's current Computer Aided Dispatch (CAD) system, providing officers with laptops that "talk" to the system and thus, making it possible for officers to obtain information on their own without the aid of dispatch.

It will also include an Automatic Vehicle Locator, which will transmit the location of all patrol cars in the city back to dispatch. Dispatchers, taking calls, will be able to see the location of each patrol and fire unit displayed on a computer map. This will help them determine which unit is closest to the location of an emergency call.

Conner said the improved dispatch system should be on-line by the first of next year; installment of laptop computers in the patrol cars will be one of the last phases.
The new system will make possible a multitude of capabilities which will be added in phases. For instance, Conner said Round Rock Police will be able to obtain photo feeds from traffic cameras installed by the Texas Department of Transportation within two years.

Conner said the department will apply for a $500,000 matching federal grant, which will pay for report writing modules, allowing officers to write reports from their patrol cars and will also provide artificial intelligence software and hardware which will link the police department's databases with other state and national databases. The chief said the new system will improve record keeping at the department as well as improve data analysis.

"We will be able to access the information with more ease than we have in the past. We will capture more detail than we have in the past," Conner said. "The information will be available on a real time basis so we can make better decisions."

Conner also thinks the system will be able to keep the community informed and active in crime prevention. The chief plans to use data compiled in the CAD system to update the department's website, providing neighborhood maps that depict areas where crimes are occurring.

"We really want to get neighborhoods involved in taking charge of their neighborhoods," he said. "The more information we give them such as, accidents, speeding tickets issued, the better."

Round Rock has 75 police officers and each laptop is expected to cost between $5,000 and $6,000. The million dollar investment will be financed through the current year's budget.

Conner said he hopes to have the system fully functional by December 2002.

642. Cedar Park TRS - info from trunker

Yahoo group: CenTexComm
Date: 2001-09-07 07:20:49 UTC
From: Chris Howell
Topic: 642 Message: 642

i've had trunker up and running 24/7 for a while now and have the following data:

it's a type ii system. 138.46 hz, if u wanted that info. has logged 31 groups, 161 radios and 6 patches so far.

the groups that i have id'd so far are (the names that the PD calls the group is in ""),
32624 PD "Patrol channel 1"
32656 PD "Patrol channel 2"
32720 PD "Tac 1"
32752 PD "Tac 2"
32784 PD "CID"

32304 FD ?Dispatch?

some stats, this shows the number of hits per freq (freq-hits)
856.7625-86737, 857.7375-54792, 858.7625-78704, 859.9375-69565, 860.7375-63875, 853.6625-129.

you will notice that there is a freq that u did not expect (853.6625). i have no idea what that is, but i have heard some short data bursts of traffic on the scanner while it shows up on the computer screen as well.

williamson county trs has a few freqs that are the same way (851.7375, 852.1375, 864.5375).

chris

643. [CenTexComm] Cedar Park TRS - maybe the odd freqs are MDT

Yahoo group: CenTexComm
Date: 2001-09-07 11:43:52 UTC
From: Robert Barker
Topic: 643 Message: 643

Perhaps the Data Bursts are MDT related traffic if you haven't heard any voice at all. I don't see how they would do MDT' s by trunking anyway. Fredericksburg has MDT"s and they are on the LCRA 900 System so I don't know how they are doing that either??? I'm still not clear on how they handle paging on an 800 Mhz system. I don't know if the pagers are tied to a conventional frequency or what.

34302 was Cedar Park Fire and 154.370 was simulcasting all traffic on this talkgroup.

644. Re: [CenTexComm] Cedar Park TRS - maybe the odd freqs are MDT

645. RE: [CenTexComm] Cedar Park TRS - maybe the odd freqs are MDT

Yahoo group: CenTexComm
Date: 2001-09-07 11:46:49 UTC
From: Lindsay C. Blanton
Topic: 643 Message: 645

The data bursts could be a few things:

1. Moscad data, which opens/closes fire stations doors, and/or sets off station alarms
2. Water/Sewer data for the public works groups. Many agencies will setup water level monitors etc and have the data transmitted over the trunked system.

i've heard that mdt's/connected laptops are not in this phase of the system.
also, that they are pulling all the vhf radios from pd and that fd is going
to take them for fireground use (doesn'tmake a lot of sense to me, but
whatever!). i've heard (but not decoded!) austin's mdt traffic and these
data bursts were much faster and *very* short, much too short to be mdt's.
sounds more like what lindsay was talking about.

648. Fredericksburg Freq List

Yahoo group: CenTexComm
Date: 2001-09-10 02:43:59 UTC
From: Myles Barkman
Topic: 648 Message: 648

I've uploaded to my website a list of freqs for the Fredericksburg area.
I've made a few family excursions to this city but haven't really been able to so any "serious" monitoring and confirming. What I do know and have heard is indicated by an asterisk (*).
Other potentially used freqs are listed as well needing confirmation of use or non-use.
If anyone in the area could help me with this, please check it out at:
http://www.clarc.org/~kg5ai/freqs/fredburg.html
Others have done lots of work on listing the LCRA systems and talkgroups so I did not include that in my list to avoid duplication.
I will say that during my last visit when I was monitoring the Boerne LCRA site, I did not hear the Fredericksburg Police on the talkgroup indicated for them. Either they primarily park on the Gillespie County SO talkgroup, they talk very infrequently, or they were using a different site than Boerne.
The Boerne site was the only one I could pick up from inside Fredericksburg. I could not hear the Kerrville site (until I got closer to Kerrville) and I never could confirm the presence of the Doss site.

Topic: 650 Message: 650

As for Austin, TX

It sounds like Austin Police are calling up extra officers for tonight..
They are getting several Bomb Threats, suspicious packages, etc. Sounds
like most APD officers going 10-41 are two man. Extra officers will Deploy
from APD Ch 8 460.500. All the malls: Barton Creek, Lakeline and
Highland are reported to be closed.

The Medical Helicopters have to get FAA approval before they can lift but it
doesn't seem to be a problem. I have not heard any of the Austin aircraft
talking.

I have been hearing ATF staging and talking on 165.285

I can also hear NORAD Aircraft on 364.200 They are refueling and
coordinating. Same traffic can be heard from San Antonio so the aircraft
must be pretty high up.

Please relay any other frequencies or news in and Around Austin that you are
aware of.

Tonight, Tuesday September 11, at 8pm on the steps of the UT Tower on the
main
mall, Student Government is organizing a candlelight vigil to express
prayers, grievances, and love to the victims and their families

I believe Bush will be speaking in just a few minutes at 730CST.

655. Kendall County (EDACS?) - Recommendations on scanner

Yahoo group: CenTexComm
Date: 2001-09-15 03:26:57 UTC
From: markeaux@yahoo.com
Topic: 655 Message: 655

Am real new to all this so please bear with me. I read the posts on a number of central TX counties sharing the LCRA EDACs system, am interested in Kendall County Sheriff's Comfort TX patrol in particular. Can anyone recommend a scanner for this system, and specifically what are the settings for Comfort TX? Thanks!

657. Explosion at Tyco and Traffic Shutdown

Yahoo group: CenTexComm

661. New APD Sector

Yahoo group: CenTexComm
Date: 2001-09-24 05:28:51 UTC
From: ExLngHrn@aol.com
Topic: 661 Message: 661

Austin PD has a new sector, George sector. It is the former walking beat areas (6th Street) and downtown Austin. Walking beat, bike, and car patrol units all are now using the "George" callsign on the radio. Supposed to be working off of the old "TAC-3" channel 12 (460.475), but was operating on Info-1, channel 7 (460.025) due to console problems for channel 12.

-Wes

664. National Guard at ABIA

Yahoo group: CenTexComm
Date: 2001-09-27 23:41:40 UTC
From: Robert Barker
Topic: 664 Message: 664

As of today, the National Guard will be visible at ABIA (and all airports)
Possible Austin Freqs:

149.625 162.2 tone Camp Mabry Operations (35th and Mopac/input is 143.400)
140.xxxx I remember they used to set up a temp repeater in this range. FM

Reported Military Air to Air in San Antonio (patrolling the city)
138.100 AM
140.400 AM
140.025 AM SEARCH 138-144 AM

Also I have been informed that Critical Air, La Grange is 461.575 (114.8pl)
The next helicopter will be based out of San Marcos

The most active federal Frequencies have been:
165.285 ATF
418.950 DEA
415.200 GSA Federal Building Security (413.95 input)

APD still has increased patrols and security at Water Treatment plants, etc.
George Sector is up and running sometimes on Ch 7 460.025 and sometimes on
Ch 12 460.475.

668. Round Rock Trunking Question

Yahoo group: CenTexComm
Date: 2001-09-29 05:31:01 UTC
From: thebanjerman@yahoo.com
Topic: 668 Message: 668

First, I'm VERY happy to have found this group and have read every post...and I'm grateful for the information I've found so far.

Here's a biggie, though, and I'd appreciate any help.

I have a BC780XLT and am just trying to get the concept of how to do trunking using Round Rock as the example. The 2067 I had previously couldn't even GET Round Rock, but this one does, sort of.

I found the control channel tonight at 859.9625 and think I set it up correctly -- I also have the other frequencies in the same bank that I believe are part of RR. Anyway, When I put it on the 859.9625 I see IDs popping up left and right, especially 3696, 4272, but hear nothing. Am I missing something here?

I'm sure there's a concept I just don't understand that isn't communicated properly in the manual or, of course, the fault may lie between my ears.

Any help as to why I'm getting IDs but no sound, how to program in the trunking stuff if I'm not doing it correctly, etc will be greatly, greatly appreciated.

Brian

669. CenTexComm] Round Rock Trunking Question

Yahoo group: CenTexComm
Date: 2001-09-29 06:17:57 UTC
From: Robert Barker
Topic: 669 Message: 669

Brian those talk groups sound right.. I don't know anything about the BC780XLT.

Just use 854.9875, 856-860.9625 and 856-860.9875, 11 frequencies in all. I just went and grabbed my 235XLT and am immediately hearing WCSO dispatch on 3248 and that 4272 which noone has been able to figure out.

http://groups.yahoo.com/group/UnidenBC780XLT
Is the main discussion group for this radio so you can check there. I'd also not use a computer to run it cuz that seems to be the main cause for problems.

670. Round Rock Trunking Question

Yahoo group: CenTexComm
Date: 2001-09-29 06:30:03 UTC
From: Robert Barker
Topic: 668 Message: 670

Ok I turned on WCSO and what does it mean when they put out a bolo on 3255 which is supposed to be on 3248 but instead it's a +7 MHZ.

Then the same bolo on Round Rouck PD but this was 1655 instead of 1648 (also +7 Mhz)

Does it just mean multiple simulcast over several channels?

671. Re: CenTexComm] Round Rock Trunking Question

Yahoo group: CenTexComm
Date: 2001-09-29 14:58:35 UTC
From: thebanjerman@yahoo.com
Topic: 669 Message: 671

Hmmm. Can I ask, in general, how far away you are from Round Rock? I think I may be slightly out of range here in South Austin.

Again, the numbers keep popping up, but I don't hear what's taking place on those ..

672. The DPS Pursuit

Yahoo group: CenTexComm
Date: 2001-09-29 15:02:55 UTC
From: Robert Barker
Topic: 672 Message: 672

Wow, last night was one of those times that I really love my scanner. I don't know how many of you got to hear the action but I was fortunate enough to be in range of the trooper on 154.680 during the initial call for assistance. I hope you got to hear all that.. It was a mess. The trooper was screaming on 154.680 he was around FM 1325 by La Frontera and he was fighting with a guy and he pepper sprayed him and the suspect managed to get back into his car and they had a short pursuit to the Southridge Apartments off 1200 South Mays and the guy ran into an apartment and shut the door and wouldn't come out. I assume he eventually did but it was very late and I didn't stay up. It was confusing because when the Trooper was calling for help, Round Rock PD was clueless as to what was going on. They were getting very limited information and they saw DPS cars coming from all directions to try and assist but everyone was mixed up as to the exact location and it was very confusing. The Round Rock dispatcher was horrible or at least the information they were getting was very slow and very delayed. I could hear the trooper screaming on 154.680 and Round Rock at the same time on their talk group saying what is going on? "All the DPS troopers are all going different directions". If Round Rock dispatcher or any deputy only had a scanner or had a way to instantly patch 154.680, they would have known.. but unfortunately they don't. It's just frustrating to sit here and listen to all that going and feel so helpless. The Round Rock dispatcher sounded like she was half asleep and was getting very delayed information which is what happens when a call taker has to type the info and it goes (like instant message) to the dispatcher. They really need a better way of doing it.

I was updating and paging the situation on www.incidentpage.net

673. Range to receive Trunking

Yahoo group: CenTexComm
Date: 2001-09-29 15:07:50 UTC
From: Robert Barker
Topic: 673 Message: 673

Well I have experienced that if you are not getting a clean good signal that the Trunktracker may just show the talkgroup numbers without letting you hear it.. but it seems like if the radio is getting a good strong control signal then it should work.

Have you tried other Trunked Systems such as the LCRA, Creedmoor if you are in South Austin you should be able to receive that one well.

Also the Austin Water/Wastewater's System.

Austin Water/Wastewater Trunked System: 856-860.2625 and .4375 (s12, s12, s1, s1, s1)
LCRA Creedmoor Site: 938.425, 937.925, 939.725, 937.200 (This is GE EDACS)

This is a post from TrunkCom-Digest. I think it will answer your
questions, plus provide some insight about SmartZone trunked systems.
It is a bit long. Some of the info is a bit dated, but will work for
most trunking scanners.

Happy Scanning,
Ben

trunkcom-digest Wednesday, April 5 2000 Volume 01 :

From: rob.berezowski@...
Subject: Re: [TrunkCom] Calgary EMS & Fire
- ---
Submissions: trunkcom@...
- ---
John,

The Calgary Police operate a 5 site Smartzone Type II ASTRO
trunked system. It
is *not* Type I. Set your trunktracker to Type II (S-0) operation for
all blocks.
The reason you are seeing a few different ID's is that
occasionally the dispatchers
are using features like talkgroup patches, and occasionally you'll
see emergency signals
go through. For your example of talkgroup (decimal) 112 and 114, the
normal talkgroup
is 112, the +2 for 114 indicates someone pressed their emergency
button.
There are 16 different status codes in all:

ID+1 = ATG
ID+2 = Emergency
ID+3 = Crosspatch
ID+4 = Emergency Crosspatch

ID+5 = Emergency Multi-select
ID+6 = ? (possibly not used)
ID+7 = Multi-select
ID+8 = DES/DVP (digital encryption)
ID+9 = DES ATG
ID+10 = DES Emergency
ID+11 = DES Patch
ID+12 = DES Emergency patch
ID+13 = DES Emergency Multi-select
ID+14 = ? (possibly not used)
ID+15 = DES Multi-select

The above comes from Warren Whitby's website. He has some good information on
the Calgary system at:

http://home.att.net/~wwhitby/canada.htm

There you will find a list of frequencies for each of the 5 radio sites (each
site has it's own control channel), as well as a list of talkgroups. The information there should give you a good start.
As for monitoring the Calgary system, I have monitored Type II systems, but
never a Smartzone. The problem with monitoring a Smartzone system is that the
system controller will only process voice calls to radio channels at remote sites where
there are currently active radios on that talkgroup. For example, if you were listening to a
North end site on a Smartzone system, and a voice call comes through for a South side
dispatch talkgroup, and there were no radios presently operating on the North radio site
set for the South talkgroup, then the voice call would not be heard on the North site.
This conserves radio channels, but makes it a problem for those monitoring the system
because they could miss quite a few calls on the South talkgroup if they were only listening
to the North radio site.
For the Calgary system, you will have to see what works the best from your
location, and probably monitor the site closest to your location. If you wanted to focus
on another area (e.g. to follow a big fire in another part of the city), you would then switch
to the site closest to the incident. I would recommend placing each zone or site in a separate bank
of the Trunktracker. Bank A for Downtown, Bank B for NW, etc. Then you simply

switch banks when you want to switch sites. Now, this makes talkgroup ID management a problem
(you have to enter and update the talkgroups on 5 or so banks, duplicating everything five times).
I don't see a way around that, however.
You could also keep every frequency for every zone in one bank. You would then
lockout every control channel, except the one for the site you wish to monitor. The trunktracker
should then only see the one control channel. When you change sites, you simply lock out the
control channel, and restore another one. That would work as well, as long as you have
enough channels in the bank to handle everything. The list you gave below has 30 alone.

Rob

Robert:

I think you've hit the nail on the head -- that's got to be the problem. I'm going to make a leap of faith and assume that I'm programming it right. After all, sometimes I do hear RR on the frequencies, sometimes not.

Question for you or any of the other pros here -- I'd like to program in the LCRA stuff and see if it works. I understand the EDACS concept of putting them in order, but when I go to http://www.trunkedradio.net/cgi-bin/display.pl?sid=48 I'm stunned. Am I to assume that if I want to hear, say, San Marcos I should use those 10 frequencies in order. If I want to hear Creedmore I have to put those in a different bank?

Like I've said before, I'm just not getting some of the big picture concepts that let these little details have some frame of reference.

Oh -- how active is the Austin system? Since you mentioned the s1, etc, I assume it's not a TYPE II? With Motorola Type II I thought that sort of stuff wasn't needed...

yes for LCRA systems, go to http://www.trunkedradio.net/cgi-bin/display.pl?sid=48 and enter the frequencies in the correct order.. You will need a different site per bank. so I suggest the Creedmoor and the San Marcos sites. But the radio will scan several banks/sites at the same time. They are GE Edacs so you will need to pick that setting.

And yes. the Motorola Type II systems on 800 are easy cuz the talkgroups are number's like Williamson County's system. But the Type 1 talkgroups do require either a standard type or USR type and John Mayson figured it to work best using those numbers so that would be a Type 1 USR programmable settings.

It's kinda confusing at first but I'm amazed the scanners are even following trunked systems.

Although I suspect this may not matter to anyone but me ;) I ended up in San Marcos tonight and, lo and behold, my handheld (P-92) picked up the San Marcos stuff which means at least I can program.

I did notice something odd, however -- somewhere during the conversation I heard 4 very high pitched beeps, then the channel either shifted or the conversation ended. What in the world are those annoying beeps??

I also picked up Round Rock way south of Austin on I-35 on the P-92. Naturally, when I got home to use the 780 nothing showed up.

Go figger.

Check and see what freq you're locking into when you get those id's with no audio. Both my PRO-2066 and BC235xlt hang up with some kind of tones on 856.9625 while in trunking mode. Started this past weekend on what seems to be random id's. I just zero'ed out 856.9625 and everything seems to work fine. I heard from Williamson County sources there are "upgrades" to the environment in progress, such as new repeaters in the more remote areas like Andice, new software, and new id's so keep searchin' and you never know what you're gonna find. If this was only an exact science...

683. monitoring Cedar Park area

Yahoo group: CenTexComm
Date: 2001-10-03 03:56:15 UTC
From: Robert Barker
Topic: 683 Message: 683

Hello Benj,

No unfortunately Williamson County, Cedar Park and Leander cannot get along with each other and they are all on different frequencies.

Williamson County and Round Rock do share the same system:

http://www.trunkedradio.net/cgi-bin/display.pl?sid=78

The WC EMS still page out on 462.975 (same as Austin EMS)

While Cedar Park just got their own system (they figured they could do it better and refused to pay to join the Williamson county system)

http://www.trunkedradio.net/cgi-bin/display.pl?sid=711

So far they are simulcasting police on 155.085 and Fire on 154.370 and EMS on 155.355

Then Leander Police, didn't get along with anybody and they went Digital so you can forget about trying to monitor them. Leander Fire was on 460.625. Not sure if they still are.

Other frequencies of interest in the immediate area:

155.070 Travis County Ch 7 Tac Radio Car to car.
154.950 intercity Mobile statewide
460.100 APD Adam sector and nearest sector to Cedar park
464.575 Lakeline Mall
154.680 DPS Mobile Units (Base on 155.460 boring)
460.825 Critical Air Helicopter for non emergency transfers
156.090 Travis County input to 155.310, units pass through Cedar Park on their way to Jonestown and that area.

Let us know when you get in town and if you have any other specifics. .. perhaps we should all meet up for dinner one night like they do in Dallas.

I used to hear the American-Statesman on 452.9750. Now
I'm hearing some sort of maintenance/ops communications.
Is this still the Statesman, just using the frequency for other
functions? Or is this someone else on the frequency?
Thanks,
Frank

452.975 now seems to be UT Housing Dorms.
I don't know where the Austin American Statesman Went.

I think those that are having trouble with the
Williamson county stuff are putting in odd freqs. As
far I know there are 11 active voice freqs to monitor.
854.9875 and then 856-860.9875 and then
856-860.9625. The Control Channel is showing some
other freqs that might be in use but we have
determined them to be data channels and nothing you
would want to monitor since it keeps messing up the
Trunktracking.

Soitenly!
Actually, the same as Mr. Barker stated...
"854.9875, 856-860.9625 and 856-860.9875"
but leave out 856.9625 (until they are done playing with it) and you should hear fairly constant traffic for FD/PD/Public Service in RR and G'town; WC Sheriff and WCEMS; RR/John's/G'town hospitals when you're in Search mode.
To be honest, my 235xlt loses its Williamson County signal capture capabilities as I travel south through Austin, but never hear a "blank". An external mobile antenna helps, but too lossy at 800Mhz. When I respond with EMS, half the time the 235xlt is useless. I live 10 miles west of G'town and I had to get the largest antenna that would fit in my attic to get decent base trunked reception, and, boy, is it known to fade, especially during the day.

You know, all this makes me wonder -- it appears that at the frequencies used by RR and others the range is astonishingly short. A lot of this has to do with the terrain and the buildings and such, I imagine.

That leads me to wonder what kind of reception problems Travis County and Austin will have when they go to their trunking system and end up in those higher frequencies. I realize it will have quite an effect on OUR ability to receive and follow transmissions, but wonder if those in power have taken into account what problems the users themselves might end up having.

691. Williamson County/Round Rock Trunking

Yahoo group: CenTexComm
Date: 2001-10-04 17:50:50 UTC
From: Robert Barker
Topic: 669 Message: 691

First I want to thank everyone who keeps writing in It looks like we are getting a whole lot more listeners in Austin. Thanks for everyone's contribution.

Regarding the Williamson County System. When the system first started, Round Rock and WC were just using the xxx.9875 frequencies (which seem to be stronger to the south of Westinghouse Rd where the transmitter site is) and there was a seperate system for Georgetown using the xxx.9625's (which seem to be stronger north of Westinghouse Rd). Then sometime later they merged them together to come up with the 11 frequencies they are now using. I don't know why there is/was recent noise on one of the frequencies. The older BX235XLT's will just listen to a single system and go with whatever that control channel tells the radio to do. The problem (I suspect) is the newer 245XLT and the 780XLT can do both trunking and regular at the same time so it is letting you hear the garble and garbage that is not part of the audio trunked system.

The system is impressive, even though it has failed a few critical times like during the Jarrell Tornado. There are huge number of talkgroups that we have never even heard active. I remember being at an event in San Gabriel park and looking on a "list" next to a radio in a Georgetown Fire truck and saw a ton of talkgroups that I have never even heard used. I also think it shows a lot when DPS is using it to talk car to car among their own agency and even when they are not in Williamson County. It shows a strong desire always held by DPS to have the capacity to have the ability to communicate car to car across the county.

I am not sure what was in the mindset of Cedar Park and some of these other smaller towns (like Taylor) who refuses to join the system. It would seem that Cedar Park would have a strong need to be able to communicate with their own county officers, constables and EMS, but apparently not. I also am not that up on trunking systems but I was told that by a certain date, all trunked systems have to be "loaded" with many departments or else they cannot keep their systems. Perhaps that is the reason for all the talkgroups that are never used.

As for the Austin system, I'm not sure how it's shaping up cuz every time I ask, everyone just says 2 years and that has been for the last several years. I know they supposedly broke ground on the 51st street communication building but I am not sure if they are actually moving dirt or what is going on. I am told they bid for digital so that is what is supposed to happen. I am not that sure that any area has really gotten the digital to work correctly. I do know Leander went digital and I was told they like it. I know if it's anything like my digital mobile phone (Voicestream), you can forget it. I wouldn't want to go into a burning building or a life threatning situation and have to rely on digital radios as my help link. I think the biggest problem is the lack of communication between the agencies and I don't see any or much improvement in this area at all. APD still and even after all this is in place, won't be able to talk to the wreckers that are stationed along the freeway and they don't get along well enough with EMS to be able to all share the same channel on a scene for coordination. AFD doesn't have APD channels. EMS does but they are scorned for even trying to communicate. Intercity frequencies like 155.370 are in place and would have been EXCELLENT if the DPS dispatcher who had her trooper fighting with the suspect the other night would have simulcast his transmissions over intercity and agencies like APD and Round Rock could have a talk group to be able to monitor those transmissions or to link up to them but So far I don't see that happening. Even the dogcatchers get guns pointed in their face and need help from APD but have never been able to talk to APD. (They all work for the city) If a system with talkgroups is created, then every agency on that system should be able to talk with every other agency. We will just have to wait and see whap happens.

On a more lighter note, on this weekend Texas Parks and Wildlife Expo will be going on this weekend and the Tx State Guard will be providing some of the communications, especially with parking. They will use FRS radios in the parking lots and the Hams may be on 146.94, ARES 147.36, AARC 146.78, and ARO 146.88.

692. various system stats and updates

Yahoo group: CenTexComm
Date: 2001-10-04 18:30:13 UTC
From: Chris Howell
Topic: 685 Message: 692

a couple of changes coming down the line/items heard on the rumor mill:

a/tcems (austin/travis county ems, formerly austin ems) is going to a multi-channel dispatch. they will dispatch the units on one channel and assign a response channel (firecom3 / firecom6 / ems ch 2 / county ems / firenet / ect.)

williamson county ems has nextel phones/radios in all their units.

the city of austin trunked radio system is estimated to be up and running in 36 months, according to radio tech close to the inner workings of the process. the trunked system will be 800, digital with some talk groups encrypted (ems/police, etc)

most of the travis county fd/ems agencies are dispatched by amr (formerly gold cross), but a few have moved over to afd dispatch. look for more, if not all, to follow. best guess, agencies will be toned out on firenet and assigned a response channel.

the cedar park trunked system is continuing to grow. some public works departments are now heard. a few pd channels are going to be encrypted in the near future (their waiting on the add-on boards for the radios.). cid/admin and a few others will be encrypted. williamson county ems was heard on the cedar park system recently. i heard that the cp system was to become part of & an extension of the wilco system but able to "flip a switch" and go independent of wilco if wilco went down. i'm not sure how that will work, maybe we'll see cp trs freqs on the wilco system, or maybe just a bunch of patches.

wilco trs stats (as of 10/4/01)
freqs / usage (c-morse code callsign id heard, d-data/control channel heard, v-voice heard)
v851.7375 81 hits
c v854.9875 3,204,452
c v856.9625 5,884.228
v856.9875 5,953.095
dv857.9625 4,545,062
v857.9875 5,946,008
dv858.9625 4,353,908
c v858.9875 7,115
dv859.9625 4,764,280 (note: 859.9875 not listed by the control channel)
dv860.9625 4,510,142
v860.9875 26,187

groups: 254 radios: 1920 patch groups: 64

cedar park stats (as of 10/4/01)
freqs / usage (c-morse code callsign id heard, d-data/control channel heard, v-voice heard)
v853.6625 199 hits
v853.6875 207
c v856.7625 772,522
dv857.7375 552,928
dv858.7625 600,701
dv859.9375 632,952
dv860.7375 595,012

groups: 43 radios: 301 patch groups: 6

the above stats are straight from the Trunker and TrunkerDM programs that read the control channel. i don't exactly recall when i reset the hit counter on the wilco system, but i think it was in the past 3 months or so. i reset both counters today, so i'll re-post the stats for both systems (if there is interest) next month.

Topic: 693 Message: 693

Thanks, guys, for all the good info!

The "noise" on 856.9625 is gone. Conversing with other trunkies near me, they heard it, too (west of G'town near Sun City).

We have to consider the cost of going to a trunking system and who will pay to have it installed when we think of why the whole county hasn't converted. It would be great if we at the Georgetown Medical Assist Team (first responders) all had trunking 2-ways to talk to WCEMS, but it's just not a priority in our budget. (send your donations to...) B-))

We use 5 watt 153.815 MHz WT's and even WC Dispatch has problems hearing us if we're in a "hole". Most of us carry our own cell phones just in case. My Minitor II voice pager (462.975MHz)? ...I have to be careful where I place it in my house or it'll be in a dead spot. (That's right, I have 3 radios/1 cell phone with me at all times, ugh!) And what about WC Dispatch, they have to listen to mutiple radios at one time to catch all the traffic from numerous different agencies.

I agree, I don't think this was the original vision. Some day, though, we'll get there.

From: David Litsinger
Topic: 695 Message: 695

Well, the Texas Parks & Wildlife Expo came and went. If you didn't go, you missed a good day out. Usually Parks personel very heavy especially in traffic control, very little this year. They had a couple dozen Texas State Guard troopers out working traffic mostly. Somewhat unusual. Of all the freqs plugged into my ALINCO, I only heard 151.355 and 159.345 being used. Kind of expected more. Dont know what the TxNG was usisng. APD only at Smith School Road for traffic. Not any real appearance in the EXPO. Really Good Show, again!!

From: Robert Barker
Topic: 698 Message: 698

Today at about 4pm I saw a military fighter jet over Burleson and Ben White flying West away from Bergstrom.

I believe 364.800 is used by AWACS or NORAD or something like that so this may have been his frequency You should also monitor 138.100.

My friend said he saw an actual AWACS headed south. This is the big plane with the round Radar dish on top of it.

Friday is supposedly the anniversary of the USS Cole bombing. Officials are saying they suspect terrorist action any time now.

Camp Mabry is getting more and more fortified. At the 45th Street exit off Mopac, they have been using a truck to block the entrance. Today they were installing the spikes that will destroy tires.

700. Bad Strom

Yahoo group: CenTexComm
Date: 2001-10-13 06:01:56 UTC
From: Robert Barker
Topic: 700 Message: 700

Well the first wave of the bad storm has passed through Austin and there may be a 2nd wave later tonight.

I'm sitting here listening to very frustrated Williamson County officers that need to relay info with Road and Bridge and are having to use their dispatcher as the go between. Funny, they are on the same trunked system but neither has either's talkgroups. And right now they need them bad. The officers can see the road and bridge guy and they just need to talk to him but he's down the road and they don't have (or don't know of) a common talkgroup to use.. They just need to have everyone's talkgroup.

With the storm are reports of heavy damage in the town of Stonewall including overturned 18 wheelers and roofs off houses. Reports of large trees down around FM 620/Bee Caves. APD Cad crashed when the first raindrop hit the ground. (It's been crashing on a daily basis now and sometimes several times a day)
Hams are on 146.940.

Some of the more interesting talking was on the LCRA system.

02-112 Red Cross Checking all their stations.. I believe this was Austin, New Braunfels and San Antonio
02-004 Rangers on LCRA Common and on 02-074

Now the TXU guys are talking up a storm: 938.8875 and 938.900 including the control channel this is a 3 channel trunked system.. what a concept.$$$$$$$$$$$ talking about lines down in Williamson County

Austin Power is 451.025

701. Stonewall, TX

Yahoo group: CenTexComm
Date: 2001-10-13 14:05:24 UTC
From: Robert Barker
Topic: 701 Message: 701

Apparently they have significant storm damage in Stonewall, TX.

The LCRA system is hopping.

I don't know why but 15-143 is what I'm hearing them on from Austin for the Stonewall area. I realize this is Hays Co north but apparently some talk groups are linked. Perhaps someone closer in will hear them on a different Talkgroup.

Last night I heard Fredericksburg (or Gillespie County) telling everyone to go back to Primary 1. They said they were using Primary 2. They also mentioned getting some additional radios for this disaster and they would be on a talkgroup called Loaner 1 or Loaner 2. they said they thought the Loaner talkgroup would be patched to their Primary 2 but the LCRA Customer Care Center would do that so they didn't have to.

They said the Luckenbach tower is running on generators and I heard 2 radio techs talking on 02-082. They said a mobile command post is being sent there from Bastrop. They were talking about bringing handheld laptops to program radios. They were talking about what they may have to do. They mentioned the power for the area may be out for several days.

02-154 LCRA EOC is also talking.. Right now It's Jonestown, TX talking to LCRA saying they have concerns about their water supply.

Pretty bad wreck in Dripping Springs this morning.. They used STARflight and 2 AirLife helicopters. All 3 helicopters were talking on 159.885 and they were very loud and clear. I was not aware that STARflight had this frequency. Someone is doing something right out there.

Also I heard Medivac the other day on 467.950. They were talking to their base, probably in Temple which I couldn't hear. The base would have been on 462.950 but since I'm too far away, I monitor the input also.

Well the 154.860 used to be a tac channel for Williamson County I'm not sure so it isn't still used as such.

I'm still trying to hear Customs on the 169.450 and you were getting traffic on 162.2125. Who knows..

Another person wanted a summary of the Medical Helicopters in to monitor in outlying areas.. so this is what I have:

467.975 Starflight out of Austin
467.950 Medivac out of Temple/Belton is the input but 462.950 if you are close enough to hear the repeater
465.825 Critical Air Austin is the input but 460.825 if you are close enough to hear the repeater
469.000 Critical Air Marble Falls
159.885 AirLife San Antonio
417.150 Input to a phone patch on SA Military System and is phone patch for airline
469.025 Critical Air San Antonio is the input.. but 464.025 if you are close enough to hear the repeater
466.575 Critical Air La Grange is the input 461.575 if you are close enough to hear the repeater
Critical Air San Marcos (coming soon)

John,

162.2125 has been reported in use by the FAA, but could also be simplex
INS comms as well

Can you give a description of what you were hearing?

Nah, it wasn't Williamson. Wrong PL, plus they mentioned a city
in Lavaca
County.

I've had 169.45 in my scanner for a long time and just now heard
it. I'm
still wondering about 162.2125. I would've written it off as an
image,
but I heard it on two scanners with different IFs.

Needless to say, the hoaxes and paranoia about "anthrax" are creating some interesting scanner listening. Austin EMS is heavily involved in this, and as such, has some new things to monitor on the radio. TDO = Terrorism Duty Officer. (I have heard TDO 1 and TDO 2) My guess is that these personnel are specially trained to coordinate these types of calls. Also, WMD = Weapon of Mass Destruction (nuclear, biological, or chemical weapons)

Enjoy the scanning,
Wes

728. Traffic Command Center

Yahoo group: CenTexComm
Date: 2001-10-25 11:46:18 UTC
From: Robert Barker
Topic: 728 Message: 728

On last night's news they showed a brand new Austin "traffic command center" or traffic monitoring center. They showed a room with about 25 TV screens where a person is watching the busiest intersections and trying to determine what can be done to improve traffic flow. As best as I can tell, this is the City of Austin's Lights, Signs and Signals Dept although I do not know where this facility is located. It was my understanding that when the new communications facility on 51st got built, that all these types of things would be in the SAME BUILDING. Plus I wasn't aware the city was going to be doing something similar that TxDOT has already been doing. TxDot already has cameras along Hwy 183 North mostly and some other areas. The TxDot cameras can be seen at http://www.kvue.com/trafficvue/ You can even watch the traffic LIVE if your computer connection is fast enough. Now TxDot is watching the roads and The City of Austin is watching the intersections. They showed one person who is in a room and she has some incredible cameras where she can zoom in on an intersection. They described a scenario of being able to spot a read light burned out and being able to page an "engineer" who could immediately respond to determine what is wrong with an intersection. If she sees any type of accident, I guess she just picks up the phone like anyone else (including the person monitoring the TxDot cameras) and has to call 911 or 311 herself. There seemed to be no thought at all of having any type of radios so that she would have direct contact with the emergency services. I really don't understand why TxDot and the City of Austin couldn't get together on this project and be at the same place monitoring some of the same traffic patterns and problems. It's like they are not working together at all. It was my understanding that TxDOT would be part of the new communications facility and I envisioned the police, fire and EMS having the ability to be able to go down the hall and look in that room and see though their cameras, what is going on. This new COA facility that was shown yesterday apparently will NOT be part of new communications center and that is very disappointing. I think it shows the lack of coordination between TxDot, COA agencies such as street department and the Emergency Services. The COA says they are really trying to do something about traffic flow but they are going about it in the wrong way. All they needed to do was ride with the Metro Traffic people and watch what is going on. For instance the timing of the traffic lights at of Wells Branch Pkwy and Burnet needs some serious adjustment only for about 2 hours during the traffic times. They didn't need to build a huge command center to determine that. Also I am very disappointed about the lack of communications since it appears that it will be one agency having to call the other agency and relate by phone. This facility could have been put with the fire department and EMS who already have some limited control of the traffic signals to be able to make the lights red or green to make it easier for emergency vehicles to travel. And since many accidents occur at intersections, this would have helped these departments to know what is going on and how severe an incident is. Well, hopefully they will work

out the kinks and we will see what happens and how effective this new monitoring center is. I will try to find out more about it and where it is located. There may be some communications between the person watching the cameras and the engineer in the field but who knows. It doesn't look like it.

729. Re: [CenTexComm] Traffic Command Center

Yahoo group: CenTexComm

From: Donald Harkins
Topic: 728 Message: 729

That sounds like San Antonio. The city of San Antonio uses a trunk system for the cities communications. The problem they have is the fire department has to call the police department to talk to them on the phone. The fire and the police department use the same trunk system. I think it would be easier if the police and the fire department would have a talkgroup programmed into each radio. So they can communicate to each other.

http://www.austinchronicle.com/issues/dispatch/2001-10-26/pols_naked5.html

Naked City
BY JORDAN SMITH

October 26, 2001:

Bigger Than Snacks
It appears that city-led efforts to bring a 900 MHz trunked radio system to Austin is squarely on schedule to be completed and online by early 2003. The project -- which has nearly a dozen partners, including the Austin Police Department and the Travis Co. Sheriff's Office -- will finally make it so that area law enforcement agencies, as well as public service entities like Capitol Metro, will be able to communicate directly with one another.

Given Austin's current, patchwork public safety radio system, the only way individual public safety agencies such as APD and the Austin Fire Department can communicate with each other while on-call is by routing communications back and forth through dispatchers. None too efficient, you might say. Pete Collins, the project's assistant director, said crews are busy building 11 preliminary radio towers across the city -- obviously a major step toward getting the system up and running. "This is real important, what we're doing," he said, "and it's real important that it's getting done. We're not just sitting around and talking about it with the beer-and-peanut crowd."

There has been quite a bit of rumor and inuendo regarding Uniden's
digital scanner presently under development. Here's the real deal.
Russ

From: "Ainsworth, Jennifer" <JAinsworth@...>
To: 'Russ Freeman' <kf4zfs@...>
Subject: RE: Digital Scanner
Date: Mon, 29 Oct 2001 15:52:26 -0600

Mr. Freeman -

Thank you for your inquiry regarding our APCO 25 digital scanner
model.
Below is our official statement regarding this issue. Please feel
free to
contact me if you have any additional questions or concerns.

Jennifer Ainsworth
Media & Trade Show Manager
Uniden America Corporation
4700 Amon Carter Blvd.
Fort Worth, TX 76155
P: 817-858-2900
F: 817-858-3228
jainsworth@...
www.uniden.com

Uniden America Corporation is now developing an APCO 25 digital
scanner model, which is slated for distribution in the fourth
quarter of
2002. To date, and contrary to industry rumor, Uniden has received
no
requests from the FCC or any federal, state, or local authority
asking the
company to delay or halt development of this or any other Uniden
product.

It is important that the public understand the nature of APCO 25
scanner technology, which allows users to pick up ordinary digital
signals
such as those now used by police and emergency officials in a few
large US
cities including, for example, Los Angeles. Scanners such as the
APCO 25
model in development by Uniden do not facilitate the decoding of any
encrypted transmissions including transmissions by national security
and
law
enforcement authorities such as the CIA, DEA and U.S. Special Forces
Units.

Uniden at this time does not anticipate receiving any requests to
alter its
product-development schedule on any APCO 25 digital scanner units.

Subject: Digital Scanner

There is a great deal of talk in the recerational scanning community
that
the FCC has requested that Uniden curtail development of the new APCO-
25
compliant digital scanner. This is supposedly out of "security
concerns"
related to the events of Sep. 11th. Was Uniden even developing such a
device
and is there any truth to truth to these claims?

Austin Energy is on 451.025 and several other 451's but I have not heard traffic on them.

This is causing major smoke in East austin for the kids trying to trick or treat and there is some concern about the smoke being safe?

Right now they just called for a 3rd alarm, which I did page out. 453.775 and 460.175 is very active as I'm sure EMS is.

They are also very busy down on 6th street for halloween. It sound like they will use 460.500 for APD and the EOC is on 453.550. EMS will probably be on 462.950 but not sure yet.

The article is incorrect. The licenses they have are
for 800 Mhz and can be found in the new FCC data base
or in the new 2001 Police Call.

Now we'll have to see if they can get the system off
the ground. I hear Motorola isn't doing too good
these days. They are being sued all over the place.
I think San Antonio was very displeased with their
Motorola system and I'm not sure whatever happened
with that suit.

There was no DPS downtown last night for the Halloween
security. I'm surprised they elected not to have them
participate. It has always been a good opportunity to
get all the agencies together. TABC was there,
talking on 156.060 along with APD using Ch 8, 460.500.
EMS was on 462.950.

There will be a lot of discussion about the Holly
Street power plant fire. Units were on the scene
actively working the incident for over 4 hours.

I am working on an extra credit project for paramedic school. I need a list of frequencies and channels for the following EMS agencies:

Burnet EMS
Marble Falls EMS
Secure Care (Lampasas)
Darnell EMS on Ft. Hood
Scott & White EMS

For Harker Heights & Belton I need any channels other than their FD MAIN (such as EMS 1 / EMS 2 and any fireground channels they may have) and any talk groups you may have for them.

This info can be sent here or to my email, c_mahlstedt@y...

Thank you very much for your assistance,
Chris

Burnet EMS 154.415 (Burnet County EMS)
Marble Falls EMS 154.415 463.150 Tac
Secure Care (Lampasas) I think that secure care folded and went bankrupt. At least the helicopter program did.

746. Who's on 156.150 using 141.3pl?

Yahoo group: CenTexComm
Date: 2001-11-05 04:53:35 UTC
From: sly.debbie@verizon.net
Topic: 746 Message: 746

I live in Bryan/College Station and have been getting some skip on occasion coming in at evening/night on Bryan Pd's channel 2. It is coming thru the repeater (155.190) which means the skip is on 156.150 (Bryan's input, their repeater output) and using the same pl as Bryan 141.3.
Sounds like some FD or medic service. I have not id'ed any unit numbers or roads or cities yet. They don't seem to be very active.

Anyone know who this is?
Sly

747. *CORRECTION* Who's on 156.030 using 141.3pl?

Topic: 751 Message: 751

I'm thinking it was Laura Bush in town to check on Jenna.

Did anyone hear the hour long RAT deal that went down last night.. Mass Confusion. I guess it was a robbery in Round Rock followed by a RAT activation .. STARflight launched. and they tracked the signal to at or near a motel at Rundberg and I35. At first they thought it was definitely in the motel and then they thought that it might perhaps be in the woods. I think they eventually found the transmitter dumped in the woods. The problem was that they didn't have enough handheld receivers for the RAT. They seem to all be unavailable and noone knew where they all were. Round Rock was offering to help with manpower but APD begged them to stay away knowing that would be mass confusion doing a SWAT type deal with different radio frequencies. In the end, I'm pretty sure the bad guy got away. But it was very interesting listening.

If anyone is interested, the city is still looking for someone to the be the Wireless Communications Trunked Radio System Manager. I would love the job but I just don't have the background they are looking for.

According to todays Round Rock Leader APD did arrest a man and woman at the Wingate Inn in Austin for the bank robbery. All of the money was located in the nearby woods. Looks like technology came through, even with all the confusion.

757. Bad Weather

Yahoo group: CenTexComm
Date: 2001-11-16 02:42:25 UTC
From: Robert Barker
Topic: 757 Message: 757

What a mess.. at 4pm we were huddled down to the basement of my downtown office and then we were told we could go.. I spent 2 1//2 hours in traffic trying to get from downtown office to my house. It was a mess and yes, cars driving right into water and having to be rescued. Those people show have their driving privileges revoked.

As you can imagine the scanners have been non-stop. The nice thing about the 2.5 hour ride home was the 4 handhelds that I was listening to .. Some of the more interesting things: Austin American Statesman is STILL on 452.975. They were running all over town taking pictures. It does look funny to see a fire engine pulling a boat through downtown Austin. Of course some of the regular sites went under.. 9th and Lamar for one. But this time I was hearing 29th and Lamar under water and portions of NB Mopac at Steck were under water. That was a first. The new section of 183 north.. where they first dug a hole and then put in a road near Anderson Mill including Pond Springs Rd.. that is all under water. I heard the Adam Sector officers say "every time it rains, this roadway floods" Perhaps if they would build the roadways up instead of digging a hole. Also Hwy 71 at the Pedernales River.. under water. Also McNeil and Burnet reported to have water over the road. Anyone asking for Starflight response got a negative.. I think they even shut down the airport for awhile there. I heard ABIA ops on 460.200 saying a small Cessna was blown out of it's parking space. The APD Lieutenants seem to be huddling on 460.025 since everyone's cell phones were at capacity. Travis County only has 2 dispatch channels and one of them had a stuck mic on 155.310 for about an hour. I just heard 969 Fire Dept on the LCRA system say go to direct.. what is direct??

It seems like the whole area anywhere near Onion Creek is under water. Right now the Fire Dept is launching a boat on Colton Bluff Springs.. all that is out there in SE Austin. Tonight there will be a lot more flooding and they are expecting flooding along Walnut Creek near Loyola and Cristol Brook Drive. I hope the new Austin Traffic Center 453.600 took note of all the interections with blinking red lights or no lights at all. Power seems to be out in many areas. LCRA system is hopping. And I think there is more rain expected tomorrow.. What a night.

Topic: 757 Message: 758

Wow it's getting serious.. we now have 2 APD officers who's car got washed away and they grabbed onto a tree and they have gone up into the tree. Noone can get to them right now.. but the officers have a handheld on 460.400 and they are screaming. The full rescue is on 453.900.. Fire Dispatch is hollering at EOC to "get off the air"

I also forgot to say that earlier, one of the AFD guys asked if they could put each fire district on a different Firecom channel since they can't reach the dispatcher. They told all the Frank units to go 41 by 21 (but no cell phones are working) There doesn't seem to be enough channels or dispatchers to handle all the radio traffic.. And for the last time STARflight is NOT flying.

Drivers keep moving the barricades and going into the water and then getting washed away and calling for help.

We are under a Flash Flood Warning in case you didn't know.. let me know what yall are hearing..

1 officer got rescued and the other officer fell into the water.. no sight of him .. STARflight is trying to help with lighting but they are having trouble flying. Lots of traffic on 460.400 and 453.900. Something on I 35 is on fire.. I did not catch the address. There are more victims screaming for help around Dixie and William Cannon and Colton Bluff. They are all stranded in the water and they are all either floating or hanging on trees. STAY out of the water. Starflight just got called away to Hays co area for a woman on the roof of her house that is being swept down stream.

Now a rollover FM620 at Quinlin Park Rd. Its 930pm and an AISD bus just went by dropping off kids. geez.. and I thought I was getting home late.

762. 11pm update

Yahoo group: CenTexComm

From: Robert Barker
Topic: 762 Message: 762

Motor units that were supposed to go 42 (off) at 5pm are just now getting to go home at 11pm

AFD is door to door around Onion Creek, Wm Cannon, etc.. trying to get people to evacuate. But they are meeting with resistance.. AFD is getting requests for help with boat evacuation but there just aren't enough boats to go around. (Park police has one.. hint hint, EMS too but they aren't sharing) Baker units are assisting on Frank Radio 460.400 with evacuations. Most active AFD for this is 453.900 and APD 460.400

Also The LCRA swiftwater rescue teams have been put on stand by so keep your LCRA Trunktracker's tracking.. Also lots of TxDot stuff on there also. 183 North is still underwater.. Too bad there aren't any signs along Mopac North to tell the people not to even bother going up 183 North. It would be nice if we had at least one radio station for news instead of "Sports Talk".

Listen for EOC on 453.550.

Oh and the hams are watching creeks, if you can bare to listen to all their formalities... they don't get too excited about things.. too much into radio prodedures. I think 146.61 and 146.940 were the pages I got earlier from EOC.

Don't forget all the tac frequencies. 155.910 Westlake, 153.935 TCSO, 155.070 TCSO Simplex, 451.125 COA electrical crews, 154.950 Intercity.

If San Antonio Helicopers come this way.. Starflight will talk to them on 159.885. That will probably be in Hays County tomorrow.

Got a couple of new lists out just in time for holiday travel.
A New Braunfels area frequency list for folks that might be heading to the outlet malls near San Marcos-http://www.clarc.org/~kg5ai/freqs/newbraun.html

A freq list for folks traveling I-45 from Houston to Dallas (or vice versa)-http://www.clarc.org/~kg5ai/freqs/hou-dfw.html

Since these lists are new, there is probably much improvement to be made to them. If you have any suggestions or corrections, please pass them along. One thing I may do for the I-45 list is try to figure out what TXDOT freqs are used in each county so you might be able to listen in on con(de)struction, or sand crews, or talk about road conditions. If you know what freqs are used in some of those counties, please pass them along.

772. Austin TX PD does NOT have 800 MHZ radios...yet

Yahoo group: CenTexComm
Date: 2001-11-27 03:55:35 UTC
From: Robert Barker
Topic: 772 Message: 772

I don't know where rumors get started but I was just up at APD Communications last night (Sunday Night) and there are no 800 Mhz Radios anywhere in sight. The new Austin TX communications facility is not scheduled to open until 2003 and supposedly the change to 800 Mhz will NOT occur until that time. They are so out of date and crowded now that the new George sector dispatcher has to sit in the supervisor area and the supervisors have to use a handheld to monitor any traffic on that channel, 460.475. The city has still not even hired a Wireless Communications Trunked Radio System Manager to oversee the system. It will be awhile before we see anything from this system.. But they will need to try and do something soon. The different departments are still "negotiating" (fighting is a more correct word for it) for space in the new building. EMS and Fire are still insisting on sleeping quarters, TxDot wants much more room and Capitol Metro is still telling LCRA that they are coming onto their system if the city doesn't do something soon.

So you can file this away with the same rumor that DPS is already going digital in regions. I have not seen it except within the DPS State Capitol division. No Texas State Trooper that I am aware of is talking to his dispatcher on a digital radio.

They are predicting some pretty nasty weather for
tonight and possible drive times to work Wednesday
Morning.

City of Austin Sand Trucks would use 155.760 and
154.965

TxDot trucks have traditionally used LOW Band 47.06,
47.08, 47.18, 47.12. but they also have the LCRA
radios in their vehicles, especially Courtesy patrols.

and sites like www.kvue.com and www.keye.com have
links to the traffic cams where you can watch LIVE
traffic as it slips and slides along the freeway.

Travis County may use 159.315 for Tac or 159.225.

DPS Austin 155.460 reporting freezing rain in Dripping Springs.. Blanco said Roads are icing over.

TxDot Crews have been non stop on 10-035 and 10-036 they were talking so much that they went to ch 2 to do more car to car talking. I have not heard any traffic on low band. News 8 Austin is talking a lot on 859.8125. TxDot said it's raining on them now at Riverside and I35. They are being followed by APD units keeping motorists from getting too close to their trucks.. They are finishing I35 pretreament now and then will do 183 North and then Mopac.

EMS Austin just asked their crews which units had chains.

778. Officer Killed

Date: 2001-11-30 12:24:35 UTC
From: Robert Barker
Topic: 778 Message: 778

Austin Police officer Clinton Hunter, Frank 405 was involved in a pursuit and was run over and killed by the suspect at Onion Creek and I35 east frontage. The media says this intersection will be closed until noon today. This occurred about 1130pm. Apparently he was out of his vehicle attempting to deploy "spikes" when he was run over by the suspect who was running from APD. The suspect is in custody.

780. Funeral, photos uploaded, and misc

Yahoo group: CenTexComm

Topic: 780 Message: 780

The APD officer's Funeral will take place at 1pm today at the Shoreline Christian Center which is off FM1325 (Burnet Road) just north of Wells Branch. Cap Metro busses will be used to transport many APD officers to the event.

I have posted some of my better photos to the Photos section of this group. Go check it out and let me know what you think. I put several pics of STARflight, DPS cars, the APD SWAT ram vehicle, the LCRA Command mobile command post, and an MDT terminal that APD, EMS and Fire uses. http://photos.groups.yahoo.com/group/CenTexComm/lst

Yesterday I heard an interesting conversation on ATF 165.285 regarding the configuration of radios to match was US Customs has. They were talking about exchanging radio frequency lists to make sure they have compatible channels to coordinate. Customs is on 165.235.

I heard Elgin PD talking to Bastrop SO on 10-031 on the LCRA System. This must be what this talkgroup is for. Bastrop County seems to be doing ok on their own 800 Mhz Trunked System, so I guess this is just a link to Bastrop SO.

Yesterday Critical Air was transporting a patient into Austin 460.825 and was forced down in Lakeway due to bad weather. They had to call Austin EMS to finish the transport by ground.. They were trying to explain to their dispatcher (who is actually in California) to try and call EMS by phone and get them to meet the helicopter. The dispatcher had no idea where Lakeway was and kept asking what city it was it.. It was a mess.. They should have just gone to Austin EMS primary and requested them direct but I guess they didn't realize Austin EMS handed this area too. Plus the pilot was probably already busy trying to get the helicopter safely on the ground. Very interesting listening.

Yes, the Border Patrol uses numerous frequencies between 163-164 MHz.
It has been reported that some of the major metro areas in Texas are now
starting to see ASTRO Digital communications on the INS/Border Patrol
channels.

791. TCSO Warrant Service Gone Bad, again

Yahoo group: CenTexComm
Date: 2001-12-20 12:21:55 UTC
From: Robert Barker
Topic: 791 Message: 791

Apparently TCSO was serving a warrant somewhere in SETCO's territory. This is a mobile home park at 5426 Cornflower off 183 South. The suspect ended up being shot in the chest. Unsure who shot him or if he shot himself. The problem was that Rescue 1 supposedly was with them on the warrant service but didn't tell anyone else where they were going to be, and after the shooting there was mass confusion as to their location. SETCO fire dept showed up but couldn't find the EMS crew. Noone knew what trailer it was. It was interesting listening for a while there both on County EMS 155.715 and TCSO 154.085. TCSO seems to have a problem when they do warrant service of not knowing what they are walking into and then not being properly staffed to handle the situation. If you recall, they lost a deputy a few years go when they had another similar incident. The Setco Chief on 155.715 said "This is the biggest cluster I have seen in awhile. Noone know where anyone is"

I'll try and monitor Williamson County one day so see if I notice a difference with the fire talkgroups

"Capital Metro Rider Info" <_riderinfo@...>

Expect Detours on Friday

President Bush is scheduled to be in Austin on Friday, January 4th for the unveiling of his Governors' portrait at the Capitol. Street closures are expected in the downtown/Capitol area, which will effect the operation of Capitol Metro buses.

Official street closures have not been announced. Detours and street closures are subject to change as a matter of security. As currently scheduled, these street closures will most greatly impact trips taken in the late morning and lunchtime hours.

Capital Metro customers are asked to plan for detours in the downtown area and possible delays resulting from this event. We apologize for any inconvenience this may cause.

803. The APD Helicopter

Yahoo group: CenTexComm
Date: 2002-01-05 05:42:45 UTC
From: Robert Barker
Topic: 803 Message: 803

All I have heard about the new APD helicopter is that the crews are not fully certified or trained. It did fly today but only for political reasons (ie: Bush see the helicopter. Give us a government grant to pay for it.) It was not used Thursday night when they had the big standoff in North Austin off Gracy Farms from the Eckerd's Robbery. They used STARflight and then requested a DPS Helicopter but caught the 2nd guy before it arrived.

STARflight used to have a FLIR, which was an infrared looking device to detect "heat" (such as a person) hidden in tall grass.. but it's broken and has been for months now.

fox7 says shows a picture and says it's a $1.6million eurocopter http://www.eurocopter.com(sorry i don't know how to hyperlink @ yahoo yet) it looks like the model ec 135 or ec 130 because of the tailrotor. they say apd isn't saying much about it.

805. Arson fire in Taylor

Yahoo group: CenTexComm
Date: 2002-01-05 22:08:12 UTC
From: georgejoos
Topic: 805 Message: 805

This afternoon (Sat) about 3:00pm Taylor had a reported arson fire at a residence. They had put a description out of a possible suspect, white male with glasses driving a pickup truck with a U-HAUL trailer, possibly heading on 79 to Round Rock.

County had broadcast it out to their units, then the dispatcher who actually had her thinking cap on, sent the info onto Round Rock. The north units immediately went out on 79 towards Hutto and spotted a suspect vehicle. The units finally got the vehicle stopped at the Texas Baptist Home on 79 at N. Mays. Taylor is enroute to talk to the suspect.

I don't think Taylor even has the fire out yet.

810. Motorola Parmer Lane Trunk System in Use (sort of)

Yahoo group: CenTexComm
Date: 2002-01-11 19:17:09 UTC
From: georgejoos
Topic: 810 Message: 810

Well, security got a late Christmas present of new radios. They now can talk from one building to another without having to relay. So far they are the only ones on the system, and not very chatty at that.

I had brought in my Trunker stuff today to try out my new slicer, so I managed to pick up some info. It has sysid 7510, and it is a Motorola (surprise, surprise) Type II system.

From 7510SYS.txt
Motorola Parmer Ln
MAP=2???????
OPTIONS=nVDf
PLAN=8
DESCR=Type II 76.76 Hz
THRESHOLD=50
DISPOSITION=abcbdbebfulxnbpbsr
c v854.7875,97,ffff,5b
v855.0375,a1,ffff,85
d 857.8375,111,ffff,0
v860.8375,189,ffff,f2

I have seen only 1 group so far:
hex ID: 10
dec ID: 16
name: Security

I have also seen only 5 radios on the system (which is about right for security).

I do need to go look at the radios later to see if I can get a list of talkgroups and/or get the guard to select each talk group so trunker can pick it up.

812. Critical Air in San Marcos and Travis County Fire Tac

Yahoo group: CenTexComm
Date: 2002-01-12 14:34:27 UTC
From: Robert Barker
Topic: 812 Message: 812

Critical Air has now expanded to San Marcos. I believe it is Critical Air 16. The skies are getting crowded with all these helicopters we now have. I am not sure if they have a frequency in San Marcos but I suspect they do. I have just heard them on the Austin Repeater 460.825. Here is the summary of Medical Helicopters that may go over Austin. Don't forget 123.450, 123.050, 123.025 and 122.750 for Air Common.

467.975 Starflight - Austin..is the input to Austin EMS 462.975 is the repeater
467.950 Medivac out of Temple/Belton is the input but 462.950 if you are close enough to hear the repeater
465.825 Critical Air Austin is the input but 460.825 if you are close enough to hear the repeater
469.000 Critical Air Marble Falls..is the input but 464.000 if you are in Marble Falls
159.885 AirLife San Antonio
417.150 Input to a phone patch on SA Military System and is phone patch for AirLife
469.025 Critical Air San Antonio is the input.. but 464.025 if you are close enough to hear the repeater
466.575 Critical Air La Grange is the input 461.575 if you are close enough to hear the repeater
Critical Air San Marcos

Also I don't have the channel numbers and frequencies for all the county tac fire groups. Many of the county FD's are now dispatched by Austin on 153.950. They had a fire in Manchaca the other day and when they arrived they requested all units go to Fire Tac 5. I never heard anything after that but I assumed they were on 154.175 simplex. Please post any Fire Tac numbers and frequencies that you know about. Thanks.

Topic: 812 Message: 814

Critical Air does have a helicopter stationed at CTMC
in San Marcos, but I think they shuffle them around.
I got 16 from San Marcos at a collision in Lockhart on
wednesday, but the other day, I heard them going to a
collision on 290 east of Elgin. Here is a list of
"TAC" Frequencies for Travis County. They all
correspond to the ESD number.

TAC-1 Lago Vista 154.070
TAC-2 Pflugerville 154.145
TAC-3 Oak Hill 154.415
TAC-4 Fire Control 154.400
TAC-5 Manchaca 156.150
TAC-6 Hudson Bend 154.445
TAC-7 Northshore / Sandy Creek 159.390
TAC-8 Pedernales 154.220
TAC-9 Westlake 153.980
TAC-10 CeBar 154.130
TAC-11 SETCO 154.205
TAC-12 Manor 151.115
TAC-14 Volente 154.1975

AFD Page out only is 154.175 and fire net is still
153.950. Currently, Only Manchaca, Oak Hill and Fire
Control are dispatched by AFD and are calling them as
"TAC-#" Pflugerville is expected to come online with
them sometime in the next two weeks. I also belive
that Westlake will be going 800 very soon. Westlake
PD is already using 857.9375

If you need any other frequencies for central texas
email me at pacrat551@...

819. Still Searching in Georgetown

Yahoo group: CenTexComm
Date: 2002-01-18 12:58:58 UTC
From: Robert Barker
Topic: 819 Message: 819

LCRA came up this morning and said they are sending their Mobile Command Post to Georgetown Tx to assist in searching for the lost female college student. That would mean a temporary repeater for that area for awhile.

820. LCRA search in Georgetown

Yahoo group: CenTexComm
Date: 2002-01-20 23:09:53 UTC
From: Art and Bobbie Barker
Topic: 820 Message: 820

The search continues in Georgetown for the missing college girl. They are using LCRA 15-143 Talkgroup.

It sounds like the mobile command post may have a repeater, as I can hear a control channel on 937.000 perhaps if someone is close to the area they could go by and search from 935-940 with either no antenna or a small antenna and see if they can get the rest of the frequencies. (in order)

821. Hays County Scanner Frequencies

Yahoo group: CenTexComm
Date: 2002-01-22 03:11:54 UTC
From: Robert Barker
Topic: 821 Message: 821

I received a request for frequencies for Hays Co near Kyle. Since I replied directly to him I figured I would share the info since I need to update my list. Please look over these frequencies and let me know if you can add too them or make any corrections.

The Hays County Sheriff and EMS and most of the fire and San Marcos stuff and New Braunfels all are on the LCRA 900 Mhz Trunked radio system. You would need a Trunktracker to property monitor this system, however you can put in these frequencies to get an idea of what's going on or you can put in the inputs which would be 45 Mhz lower.

San Marcos 935.4625 935.9250* 937.9750 939.1500 939.5000 935.3875 935.9750 937.9500 938.5000 939.8875

Otherwise, try Hays Co SO on 155.865 and these others

155.745 Kyle ??
155.655 Kyle PD (?) let me know if this one is good
159.210 DPS New Braunfels Relay (input 154.665) Ch 11
155.865 Sheriff's Dept Simulcast of SO Ch 1
155.970 old Hays County SO Ch 2
154.385 N Hays Co Fire (old) Buda Fire?
155.895 N Hays Co EMS (old) 153.875 input
154.265 old San Marcos Fire
154.250 Dripping Springs Fire 159.045?
160.740 Union Pacific train
154.055 old SWTSU In San Marcos - Maintenance Dept (155.835)
466.575 Critical Air LaGrange in the air. Should switch over to 460.825 when close to Austin
154.115 Old Bastrop County SO Ch 1 (156.000) * now on 856-860.7125
155.595 Comal Co Sheriff(154.710)/Old TABC Freq
155.985 Buda unknown
461.700 Central Tx Medical Center ?
Caldwell Sheriff, Unit Road system, City of Lockhart (PD, EMS, FD, Utilities), and
Lockhart ISD are on 866.100, 866.350, 868.650, 868.900

One BIG thing is that Critical Air Helicopter has just started operations in San
Marcos I believe. I am not sure where they are based but I'm guessing it is
CTMC. I definitely need to know what frequency (ies) they are using. The
main channel for Austin is 460.825 but you can probably hear them better if you put in 465.825 which is the input to the repeater that you will hear them in the air. I am not sure if they have a seperate frequency for San

Marcos yet. They may be on the one I found for CTMC.

823. Re: [CenTexComm] Hays County Scanner Frequencies

Yahoo group: CenTexComm
Date: 2002-01-22 05:13:20 UTC
From: Aaron Slaughter
Topic: 821 Message: 823

Hey Robert, here is a list of frequencies I have for the San Marcos / Hays County area....

RX TX
154.385 / 153.770 Hays County Fire Net (Kyle, Buda, South Hays)
154.130 / 151.040 New Braunfels Fire & EMS
155.595 / 154.710 Comal Sheriff Ch. 1
156.000 / 153.925 Comal Sheriff Ch. 2
154.295 / 153.830 Comal County Fire Dispatch
154.815 / 155.730 Caldwell County Sheriff (mustang Ridge, DPS)
854.3125 / 809.3125 Caldwell County Sheriff (County 4)
154.370 Lockhart Fire Department
154.710 Lockhart EMS

I don't know about the other frequencies you have listed around San Marcos, I haven't heard any traffic on them. CTMC is housing critical air at the helipad. I haven't heard any traffic on any frequency other than 460.825 from austin, but I'm keepin a close ear to the scanner. As far as the LCRA system.... All of San Marcos, (PD, Fire, EMS, Utilities) are exclusively on LCRA, Hays county sheriff, and the rural fire departments except south hays fire dept. just have a link to the LCRA system. I'm not too sure about New Braunfels, I know that I can hear PD and Fire units on the LCRA system, but I can also hear them on the VHF frequencies too.
If I can be of any further assistance, please let me know.

Does anyone know what kind of radio system will APD use?

825. APD is supposed to be Motorola Digital

Yahoo group: CenTexComm
Date: 2002-01-23 18:06:06 UTC
From: Robert Barker
Topic: 824 Message: 825

All that the media has told us is that the new City of
Austin System will be a Motorola digital system.
However every time I inquire, they say it will be two
years away and that was two years ago. The
frequencies have been licensed. You can view them at:
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/callsign.hts

and search callsign WPQY813

826. Georgetown Search

Yahoo group: CenTexComm
Date: 2002-01-24 14:30:28 UTC
From: Frank Jacks, Jr
Topic: 826 Message: 826

There has some discussion here on the search in Georgetown for the missing girl and their use of the LCRA system. Could someone please let me know which of the LCRA systems they are using? Is it the one with: 935.4875, 935.9500, 937.0000, 938.9625, 939.9125? And is the only talkgroup they are using still 15-143? Also, I'm assuming that Georgetown PD are involved. Are they using any special talkgroups on their system? And, finally, is the Sherrifs dept involved at all, and are they using any special talkgroups?
Thanks,
Frank

827. Georgetown Search

Yahoo group: CenTexComm
Date: 2002-01-24 15:37:28 UTC
From: Robert Barker
Topic: 826 Message: 827

The permanent tower that we know about is the "Austin"
tower located at I-35 and Westinghouse Rd. That tower
is listed on:

http://www.trunkedradio.net/cgi-bin/display.pl?sid=48

has these frequencies:
935.2125 935.6750 936.2000 937.2000 938.2250
935.1750 936.7250 937.7500 938.6750 939.7500

That should be the primary tower that would carry the
transmissions for the search. However, within the
last week I was hearing a weak control channel on
937.000 which I suspected may be the mobile command
post repeater that may have been set up at the church
where the search was taking place. I also heard that
they are no longer doing an active search. I would
love to get the frequencies in use by the mobile
command post so we can have them and I'm sure Lindsay
would like to update his wonderful website. If you
are anywhere within the signal of the 937.000 control
channel (if it is still transmitting) you can search
from 935-940 to see any other frequencies that might
be part of the system.

828. APD vs 6th Street Bars and Mardi Gras

Yahoo group: CenTexComm
Date: 2002-01-25 20:20:24 UTC
From: Robert Barker
Topic: 828 Message: 828

APD has just done a major press announcement whereby several bars will be closing on 6th street. This is conveniently 2 weeks prior to the big Mardi Gras events that went so bad last year. APD took a lot of heat for their conduct on 6th street last year and now the bars are trying to get "parade" permits for this year and APD is not being cooperative. This investigation involved APD, TABC and IRS. Expect to be hearing more about it.

At least five club owners face charges
Liquor-license investigation could shut down a half dozen Sixth Street nightspots
By Jonathan Osborne and Alex Taylor
American-Statesman Staff
Friday, January 25, 2002

Austin police have filed felony criminal charges against at least five Sixth Street club owners who police say falsified government documents when applying for their liquor licenses.

As a result, the Texas Alcoholic Beverage Commission has started the process to revoke the licenses of at least six clubs in the entertainment district, including the Roxy, Bayou Lounge, Treasure Island, Platinum X dance club, the Rehab Lounge and the Capitol Draft House. Revoking the permits would likely lead to all the bars in question closing, beverage commission Lt. David Ferrero said.

Eight warrants have been issued and a police department spokeswoman said most of the arrests have been made. She would not discuss the arrests further. Police Chief Stan Knee has scheduled a 1 p.m. press conference to announce the conclusion of the department's joint investigation with the alcoholic beverage commission.

The arrests also will likely affect several Austin convenience stores, which share the same owners, investigators said this morning.

An unrelated investigation has led to Azucar, a club on Fourth Street, and The Metro, a Sixth Street live

music venue, losing their licenses early next month.

"I think it's terrific that APD is prosecuting people who break the law," said Charles Heimsath, a Downtown Austin Alliance Board member who has an office at Sixth and Brazos streets. "You don't want to run everybody out of business, but clearly, at the same time, you do want to try to prosecute those that aren't abiding by the rules."

The alliance, a tax-funded organization of downtown business owners, has a history of butting heads with some of the street's club owners, particularly ones they accuse of illegally catering to underage drinkers.

An alliance spokesman said the organization is currently protesting the applications of three former club owners who have had problems with the police department in the past.

At least one of the club owners who was charged and arrested Thursday night said the arrests were unjustified.

"I have the documents to show I didn't falsify anything," said Cynthia Yassine, who owns the Rehab Lounge. "They're coming down on us really hard."

The bust comes two weeks before Mardi Gras, the February celebration that ended in a riot last year. Police ended the annual celebration by clearing the streets using pepper spray and rubber bullets.

The felony charges stem from bar owners' lying on their renewal applications for liquor license, Ferrero said. In some cases, they omitted past arrests or convictions, Ferrero said. In others, they lied about who really benefited from the permit.

"There are certain things that they had to swear to," Ferrero said. "Digging through APD records on past arrests and utility bills, they were able to determine the stuff they had filed with us was incorrect. That's a felony because it's falsifying a government document."

Topic: 821 Message: 835

I went to the outlet mall on Sunday and I did NOT hear Hays County SO using the LCRA 900 Mhz System.. they were just on the 155.865 (154.800 input).. However I did hear San Marcos PD and EMS on the Trunked System.

I don't know why the SO went off the System. Perhaps they were having reception problems. They never did have coverage on the far WEST end of the county on the 900 Mhz System.

From: Robert Barker
Topic: 840 Message: 840

I'm still hearing KEYE news talking to Captain Mike (the helicopter guy) on 463.8875. I know this is bleed over from another frequency but I don't know which one. They seem to have moved from their 800 Mhz trunked system again.. I think they are using that UHF trunked system but I'm not sure.. I think I have the 463.8875 in cuz it is used at Northcross Mall.

Does anyone have any ideas?

Also Saturday night 6th street 11pm will be the place to be. 100 women are supposed to protest against APD recent decision, by going topless.. should be good listening. 460.500 and 156.06 for TABC. and Possibly 166.000 for IRS. They may shut some more bars down and have to arrest several hundred people.

From: Robert Barker
Topic: 846 Message: 846

Well there seems to be a LOT of radio traffic from 6th Street.

APD is on 460.475 Ch 12

I heard EMS earlier on 462.950

Expect to hear TABC on 156.060 and Possibly even IRS on 166.000
Don't forget DPS capitol on 155.445 and the Horse Carriages 464.025
The Statesman is on 452.975 and you aren't supposed to be listening to the news services between 450-451 Mhz.. particularly don't listen to 450.3125 Fox 7 News, and KVUE's freqs on 450.05 450.15 and 450.35 450.25 but you probably can listen to News 8 Austin on 859.8125, which is just a business freq.

Right now AFD has an active Box Alarm on a House Fire on Aggie Lane. 1901 Aggie Lane.

If anyone feels like it and has a spare radio.. search 465-470 cuz we need to find KEYE.

851. Travis county pursuit?

Yahoo group: CenTexComm
Date: 2002-02-20 12:31:20 UTC
From: Robert Barker
Topic: 851 Message: 851

If Travis County has a pursuit they would have been on 154.085 or 155.310 (repeater output). But I'm surprised to hear that they would chase someone into Guadalupe County or to Bexar County. I guess I missed it. But it looks like they did call out their SWAT team and it was in Gonzalas County off CR 466 and the suspect was arrested according to the news. Most of their SWAT communications takes place on 154.950. Perhaps this was some sort of Task force deal. Also, unrelated but I did hear APD's "Air 1" flying around last night trying to see what numbers they could see off the top of the police cars.. I think they are trying different colors of reflective tape to see what works best.

BCSO east patrol was just talking about a pursuit of a narcotics courier on CR 308 in Guadalupe county.
Supposedly ranging in speeds from 35 to 85 mph
They stated that the pursuing agency was TRAVIS COUNTY....

BCSO stated they were being requested to assist w/ the stinger (stop spikes) but that the vehicle had turned away
and was now heading away from Bexar County.

Anybody know what frequency (ies) this operation is occurring on???

Why should they stop just because its a county line? They'll call the
adjoining county and inform them of the pursuit and perhaps request
assistance, but if they're chasing someone, they can go from coast to
coast if necessary.

(my parents are cops, I asked about this once when I was like 6)

854. Travis county pursuit?

Yahoo group: CenTexComm
Date: 2002-02-20 21:56:54 UTC
From: Robert Barker
Topic: 851 Message: 854

Many of the Central Tx agencies have an anti-pursuit policy .. including Austin PD. Travis County SO is a little different and they will generally go further. APD will call off a pursuit many times and especially if it leaves the city. They do try to get DPS involved to take over because DPS will shoot out the tires and follow them to the state line. I have only seen APD go into Bell Co once and also to San Marcos once on a pursuit but that is very rare.

The APD helicopter will be used primarily for issuing tickets to speeders. I'm disappointed to hear this and feel the airtime could be better used at catching crooks.

From: Frank E Jacks, Jr.
Topic: 855 Message: 855

Does anyone know why there are two helicopters flying
over northwest Austin - basically in circles. I just got
home from work. They've been circling from what I can
see for at least 10 mins now.
Anyone care to guess or know???
Frank
Northwest Austin (183 & 620)

APD's new helicopter is flying beside Chopper 36 so they can film them and take pics of the new helicopter. They are talking on 123.025 air to air. this is the common air to air frequency.

APD is having a press conference tomorrow morning.
They are going to announce the new helicopter. Since
no one else can ride in the helicopter, KXAN is taking
aerial shots for what we (the media) call pool video.
This means everyone can share the same video that some
else shoots.

From: Robert Barker
Topic: 858 Message: 859

Yes the Drug Buys are an ongoing thing all over the city.. Undercover Officers buy drugs with marked money and then they bust them. What I don't understand is why they do this through the repeater and broadcast it all over the city. The only reason would be to have it recorded in case something happens. They should do it on direct. They are also referring to "Motorola" radios.. Not sure if it's FRS or what.

GEORGE Sector is The Downtown Sector that used to be part of Baker. basically South of MLK to the River is George on 460.475 Ch 12.

Baker Sector is now North of MLK and up to about Anderson Lane. on Ch 3 460.450.

It's good to see some good Austin Radio Discussion here.. let's keep it up.

864. austin police 10 codes

Yahoo group: CenTexComm
Date: 2002-02-22 12:57:12 UTC
From: Robert Barker
Topic: 864 Message: 864

When an officer goes in service he will go 10-41, give his employee number, The beat he is officially assigned to, the radio id for his vehicle 5101 or whatever vehicle number he has, and then give the number of his handi-talkie, 1630 on the side. The numbers on the vehicle and the handi-talkie are the inventory numbers in case the radio is lost and if either of the emergency ID's goes off they will supposedly know who it is.

The codes are standard, same as in Police Call but briefly they are:

10-1 receiving poorly
10-2 receiving well
10-4 acknowledge
10-6 busy, like stand by I'm busy
10-7 eating lunch.. they refer to this as simply 7 and leave off the 10, Is it clear to go 7?
10-8 In service from the call.. after they are done taking 7 they will be 10-8
10-9 repeat
10-10 is a fight but not really used by APD
10-12 stand by
10-17 complainant or reportee. Who was the 10-17 on this call
10-18 quickly, need units 10-18
10-19 go to, can you 10-19 the north sub to change out your vehicle
10-20 location
10-21 telephone
10-22 disregard
10-23 on scene
10-25 meet me, can you 25 me at Krispy Kreme
10-27 Check Driver's license or ID to make sure it's valid
10-28 vehicle license check
10-29 check for wanted, he's negative 29
10-32 gun, subjects are reported to be 32
10-33 emergency
10-36 time
10-41 In service at the beginning of the shift
10-42 out of service at the end of the shift, All Baker 400's can go 42
10-43 information, do you have any more 43 on this call
10-46 assist motorist
10-50 accident
10-51 wrecker, I need 3 51's to this location
10-52 EMS, 52 cleared for this call, meaning EMS is enroute, 10-50 52 cleared
10-55 DWI, the driver of this vehicle appears to be 55
10-56 Public Intoxicated, There is a 56 male walking down 6th street
10-59 meet
10-60 arrived in the area
10-75 backup, Does he need a 75?
10-76 enroute. I'm 76 to the jail with a 56

10-81 Intoxilator Operator, we need an 81 at the jail
10-89 bomb threat
10-95 in custody, 95 enroute to the jail
10-98 wanted stolen indicated, used by DPS a lot
10-99 wanted, He is 99 out of Williamson County
10-100 used for quick break
10-200 RAT activation

From: Kris Ramsey
Topic: 866 Message: 866

saw this on usenet today. don't bother trying to find one in san antonio...their computer showed 1 in stock @ the Babcock & Heubner store, but when i got there, the mgr. said that one had "grown feet and walked away" some time ago, and is still in the system because it was never actually purchased. hopefully you guys in austin will have better luck.

also, i'm not sure that this is new info...one RS employee said this scanner was 'devalued' last May, so they very well may all be gone...

Subject: PRO2066 for $39.99

I just discovered that Radio Shack slashed the price on their first trunking scanner, the PRO-2066 (20-195) to $39.99 Here in NJ, I had to call stores in 5 different districts and have them search the other stores on their computer. I finally found what appears to be the last one in NJ in the Englewood store. If you are reading this from the NYC metro area you are probably out of luck. RS stores in more rural areas may still have some.

Good luck!

870. Heart Hospital is probably Critical Air

Yahoo group: CenTexComm
Date: 2002-02-24 14:48:14 UTC
From: Robert Barker
Topic: 870 Message: 870

The Heart Hospital Doesn't own a chopper that I know of.

Critical Air based out of Brackenridge in Austin does a lot of transports to Heart Hospital however and they are on 460.825 or you can still hear them on 465.825 if you don't want to hear the other agencies they share the frequency with. STARflight also goes to heart hospital and they use the regular 462.975 to talk. Anything out of Temple/Belton would be on the 467.950 talking back to Scott and White Hospital. Most all helicopters will still talk to the hospital on 155.340 if they don't relay patient info though their primary dispatch.. I"m guessing Critical Air is the helicopter that you are seeing the most.

San Marcos is online with their Critical Air helicopter too..they are mostly using the Austin repeater. They have a pad at the CTMC hospital there and they are staying in an apartment that is only about a mile away.. When they get the call they drive over to the pad. They have a UHF 2 watt repeater there in San Marcos to use only while they are on the ground and then they go back to using the Austin Frequency once they are in the air. I don't have the 2 watt frequency yet but I'd imagine it's a UHF split and could be searched from 465-470.

There is a repeater on 461.700 for CTMC but it has been licensed for about 5 years and is definitely not a 2-watt repeater being 35 watts output and 382 watts ERP.
It is a community repeater, though.
During the time I was in the area, I did not hear any activity on this frequency.

Other than that, I could not find any obscure 2-watt repeaters licensed in the hospital area so they must be operating in covert mode. :)

876. Cedar Park on Williamson County TRS

Yahoo group: CenTexComm
Date: 2002-02-26 04:31:55 UTC
From: georgejoos
Topic: 876 Message: 876

It looks like Williamson County is at least simulcasting the Cedar Park TRS on their system. I am listening to Cedar Park PD responding to a fight on their Patrol 1 (Group 32624) while monitoring the Williamson County system with trunker. I do not see the Cedar Park Frequencies listed. I was listening to Cedar Park this weekend on their own TRS.

I happen to have transfered from the laptop my grp file for Williamson County system. Looking back at this I see several of the Cedar Park groups listed as being active in the Williamson County system. That might explain the high grp numberrs for Cedar Park.

This is an interesting development. I will have to see what I can find out from some of the dispatchers.

882. Austin trails other cities in police response

Yahoo group: CenTexComm
Date: 2002-02-26 20:33:01 UTC
From: Robert Barker
Topic: 882 Message: 882

This article along with a nice map of the NEW Sectors for APD appears on the front page and A8 of today's paper.

Austin trails other cities in police response
City will work for better time but without adding money or officers, which some say is necessary
By Alex Taylor
American-Statesman Staff

Tuesday, February 26, 2002

If you call 911 with an emergency, it will take Austin police officers an average of about nine minutes to get to you.

You may be better off having an emergency in Dallas, where it takes closer to eight minutes to get help from the police, or perhaps Fort Worth, where it would take less than seven minutes. In Houston, someone would be there in less than five minutes.

Austin trails every other large city in Texas in its police response time.

Over the course of 2001, Austin police officers' average response to Priority 1 emergencies -- the most serious calls -- crept up from 8 minutes and 20 seconds in January to 9 minutes and 1 second in December, while the number of crimes committed climbed 12 percent. Now the entire department, from street cops to the chief, are pushing to drive that response time back to 8 1/2 minutes, still a longer time than other big Texas cities.

Response time -- the time it takes for police to arrive at an emergency from the moment 911 answers the call -- is viewed as a key measuring stick for police departments because in matters of life and death, every second counts.

"We're going through massive amounts of data with a fine-toothed comb, and our goal is to get the times down to 8:30," Assistant Police Chief James Fealy said. "Having our response times going up rather than down is not acceptable to us."

To reduce the average response time below 8 1/2 minutes would take more money and more officers, Fealy said. Yet police officials have repeatedly said that they are not seeking a larger police force.

"It doesn't necessarily matter how many officers you have, but more, how effectively you use them," Austin Police Chief Stan Knee said.

Some officers on the street disagree.

"The size of the force is one of the key elements in getting response times down," said Mike Sheffield, president of the Austin Police Officers Association. "Common sense tells you that the more officers you have on the streets, the faster they'll be able to respond."

Other cities such as Dallas and Houston have tried to reduce their response times by bulking up the number of patrol officers and paying more overtime.

That appears unlikely in Austin.

"We're not going to do any changes now; the city is undergoing substantial revenue reductions with the sales tax specifically," Austin Mayor Gus Garcia said. "I don't think the people of Houston are any more satisfied with their police force than the people of Austin. . . . I don't see people moving to Houston."

Other City Council members, when contacted, did not respond.

Austin's goal of 8 1/2 minutes is a relatively arbitrary number the department settled on after taking into account the size of its force and the current monthly call load of more than 70,000 calls, most of which are not top priority. Traffic, construction delays, roads and communication technology are also factors in reaching the goal.

Knee added that Austin may also include more crimes in its Priority 1 category, making Austin's response time slower than in other cities with narrower definitions of emergencies.

A decade ago in Houston, response times were similar to those of Austin today. But things changed shortly after Bob Lanier was elected mayor in 1991 on a platform that included improving police services. Lanier demanded faster response times, and with his new police chief, Sam Nuchia, the city set its goal at five minutes, cutting response times almost in half.

"The key was adding officers to the streets and cutting back on unnecessary community programs," said Nuchia, now a judge on Texas' 1st Court of Appeals. "A higher patrol presence suppressed crime, cut down on our call load and brought the response times back down. We also allowed officers to volunteer for time and a half, which put even more officers on the street."

Houston added 655 officers at the beginning of 1992. Within six months, the crime rate was down 16 percent, and response times were cut by 33 percent, according to the department's statistics.

Dallas police have also seen their response times drop with more officers on the street.

"You get your times down to the lowest you can where the public or the City Council is happy," said Ron Waldrup, deputy chief of the Dallas Police Department. "Beyond that, the consideration is adding more people (to the force)."

Austin police are authorized for 1,298 officers, or around 1.9 per 1,000 residents. The City Council has agreed to raise the number to 2 per 1,000 over the next five years.

Other large Texas cities have a higher ratio of police to residents. Dallas' response times hover around eight minutes, and it has 2.4 officers per 1,000 residents. Fort Worth has 2.23 officers per 1,000 residents, and its response time is under seven minutes. Houston, with a response time under five minutes, has 2.8 officers per 1,000 residents. San Antonio would not provide updated numbers.

Fealy says Austin's primary challenges are dealing with construction and traffic. Additionally, the vast size of one of the department's patrol districts in Northwest Austin has impeded response time there so much that the city's overall average has been thrown out of balance, he said.

In the meantime, some Austin residents have begun to wonder how the city will improve the time it takes to get help in an emergency.

"I feel that (8 1/2 minutes) is too high, given the number of officers that are available. I've heard people in our (neighborhood meetings) with concerns," said Gavino Fernandez, president of El Concilio, a group of neighborhood associations with around 6,000

residents in East Austin. "We need to work together as a community to reduce that and look at whether an increase in officers is a remedy, and also if we need to reposition officers more effectively."

892. Army Aircraft in Hays County

Yahoo group: CenTexComm
Date: 2002-03-02 01:33:22 UTC
From: Ryan Pape
Topic: 892 Message: 892

SETCO came up on Firecom8 advising They were talking to Hays county about a downed aircraft 5 miles south of ABIA just past the county line.

The ABIA PD dispatcher came up on Firecom8 and advised the aircraft in Hays county was a Military Helicopter that may have landed, still looking for the other aircraft.

893. Re: Cedar Park

From: georgejoos
Topic: 702 Message: 893

I have had trunker running a few times on the Cedar Park system (one time I left it on all day just to see what it picked up). The trunker file is below. The 2nd line has the what each field is - ID_hex is the hex id while the ID_dec (field #8) is the corresponding decimal id

I got some of the group names from www.trunkedradio.net, but others I picked up while listening.

The APD helicopter uses all the regular APD Channels. 460's. In addition, they will talk air to air with other helicopters on 123.025

I'm not sure I'm following what Cedar Park is doing..
06f0,7,0,"?",3c784164,17,0,1776, 1776,02/23/2002,20:27

Are you hearing WCSO talk groups on Cedar Park or are you hearing Cedar park on the WCSO system or both.. The above looks like a WCSO talkgroup on Cedar park.

The whole ordeal was a mess with the plane crash this evening.. It all happened as I was leaving work and I listened to the drama unfold as I was stuck in traffic getting home. They were having trouble trying to find the aircraft and the AFR trucks were wanting to go back to their station and wanted to do a command post from there, and start doing up maps.. I think that delayed their search efforts some and When dispatch said that an entire power plant had lost power they were asking where it was and where the lines ran and I'm surprised they didn't already know that information. It ended up taking them about 2 hours to find a plane that was only a few hundred yards of the runway.

Whoops, something extra snuck in the cut and paste. That is a RRPD group that somehow made it in.

I am hearing the Cedar Park groups on both the Cedar Park trunk system and also on the Williamson county system. So I am wondering if there are plans to merge the two at some point.

A bit of info in that line of thought is Williamson County has a pending application with the FCC for an expansion of their stuff with tower permits for Cedar Park, Liberty Hill, Georgetown, Round Rock, and Thrall. This might solve some of their coverage problems. I found it all out on the FCC web site.

I will be adding a picture from the scene. SETCO were pretty much on the money. AFD were confused the whole time. Another delay that kept AFD behind in the search was that they had to be escorted by airport police on the property.

Topic: 901 Message: 901

Hey guys/gals,

I'm looking for something standalone to replace my PCR-100, which works great but I hate being tethered to a computer.

Looking for something fairly recent, preferrably with up to 1.2/1.3ghz coverage (minus cellular of course). Trunking would be nice, but is not required.

Will buy outright, or alternately trade my Icom PCR-100 plus an older IBM 365XL Thinkpad laptop (P120/1.4G/CD-ROM/floppy/40M/Win98, 800x600 color LCD) that is setup to control it, if what you have is nice enough. Will throw in an PCMCIA ethernet card (10baseT) as well if you need one.

If you've got something decent lying around, make me an offer.

Thanks.

Bill

904. Scanning Habits Since 9/11

Yahoo group: CenTexComm
Date: 2002-03-13 00:06:45 UTC
From: Frank E Jacks, Jr.
Topic: 904 Message: 904

I posed this question to the SCAN-L@...
but was interested what people around me were doing as well:

After watching the programs recently regarding the 6 month
anniversary of the 9/11 attacks, I was curious about something:
How has everyone's scanning habits changed because of the
attacks -
ie different channel/bank set up,
increased listening,
listening to different agencies, etc?

From: texasborder
Topic: 908 Message: 908

I recently visited Enchanted Rock State Park. There were some park comms on 151.340 but not much.

The park ranger at the front gate had a handheld that was receiving comms that I was not hearing on 151.340. Are they using a second freq or perhaps they have a direct link with the sheriff?

They were talking on 151.340 about contacting the sheriff to ticket illegal parkers along the highway.

Didn't know anything about the fire in Taylor. Apparently it was a strip shopping Center involving an office supply store according to www.news8austin.com. that was about 3pm Sunday

Then early this Monday Morning about 1am they had a fire at Johnston High School that went to 2 alarms. It was in their print shop, according to www.kvue.com

918. 162.210

Yahoo group: CenTexComm
Date: 2002-03-20 04:32:14 UTC
From: Robert Barker
Topic: 918 Message: 918

During the storm I heard a male talking to a female on 162.210 in Austin, Tx commenting on the weather and referred to it raining so hard that a fish just swam by or something like that.

My memory escapes me.. who is this? I know the Secret Service Mike is 165.2125 for Ladybird detail but this was something different.

Also the news BRIEFLY mentioned that a train derailed on the Union Pacific (Mopac) line in North Austin.. Where exactly was this and what caused the derailment?

It happened in front of Kiddy Acres on Howard Lane.
The cause is still unknown. The carboxes were empty
and no injuries. The derailment happened Monday night
at around 9:45pm. The property is owned by Capitol
metro.

I have also heard some talking on 162.210 about a
month ago.

929. Frequency Lists

Yahoo group: CenTexComm
Date: 2002-03-24 15:07:05 UTC
From: Robert Barker
Topic: 929 Message: 929

Several frequency lists are posted on this site at:

http://groups.yahoo.com/group/CenTexComm/files/

All of APD is on the 460's including the new Helicopter, Air 1
Air 1 will switch to whatever sector they are over.

AUSTIN POLICE DEPARTMENT Austin Tx Frequency List 01/13/2002
1 460.400 Frank - Southeast

2 460.100 Adam - North and NW

3 460.450 Baker - Central & West

4 460.325 Edward - Northeast

5 460.175 Charlie - East

6 460.275 David - Southwest

7 460.025 Info 1 - Car to Car

8 460.500 Info 2 - Citywide

9 460.225 Now being used by State

10 460.200 Bergstrom Airport Security

11 460.375 Narcotics

12 460.475 George - Central/Downtown - 6th street

13 460.050 Bergstrom Airport PD (ABIA)

EMS uses 462.975 in the city and 155.715 in the County and STARflight can be heard on both of these frequencies.

930. Re: [CenTexComm] Red Card Certification?

Yahoo group: CenTexComm
Date: 2002-03-24 17:29:46 UTC
From: Aaron Slaughter
Topic: 927 Message: 930

The Red Card certification is from the U.S. Forest Service. To obtain one, a firefighter must pass a 40 lb. pack test across rough terrain and has to train on wildland firefighting tactics. To work for the USFS you must possess a red card cert.

931. Sunday Updates

Yahoo group: CenTexComm
Date: 2002-03-24 18:34:34 UTC
From: Robert Barker
Topic: 931 Message: 931

Engine 23 is following EMS with apparently a very large patient.. so large in fact that they called dispatch and asked Engine 28 to assist them and EMS in getting the patient out of the ambulance. They were going to North Austin Medical Center.

The SWAT standoff on Wells Branch was interesting Friday Night. He apparently went to the Sonic to kill a female employee that didn't want to be in a relationship with him. He went with a long rifle. He ended up holding the employees hostage and finally released them. He stayed by himself about another hour before finally giving up.. The cops could see him perfectly the entire time and had the ability to take him out had they needed to . It was a mess traffic wise because they shut off Wells Branch there at I35 for almost 2 hours. Interestingly enough Travis County used 154.950 for the whole SWAT deal. I wonder if they will keep using that frequency even if they switch to digital trunking radios.

Thanks for the info on the Red Card Certification and for the info on the Train Derailment. I can't believe I missed that one. The rail line off Howard Lane by Abbott Labs is that Longhorn Railroad which is operated (kinda) by Capitol Metro. They use 161.52 which is also used on the Hill Country Flyer.

The last time I heard APD's AIR ONE was Friday night after the TCSO Hostage deal in Wells Branch. They had a big wreck on I35 in front of Tinseltown up north here.. They were all waiting for STARflight to arrive and AIR ONE shows up hovering over the scene.. They thought it was STARflight. and they were trying to talk to him but STARflight kept saying they were still enroute.. Kinda funny. They were talking to STARflight on 453.900. AFD went and it ended up being in Pflugerville's area.. they seem to have the most wrecks there..where they can't figure out if it's Austin, Travis County, Williamson County or Pflugerville. Sometimes, all the above will respond to collisions.

932. Comal Co sheriff simplex channel?

Yahoo group: CenTexComm
Date: 2002-03-24 20:47:22 UTC
From: sly.debbie@verizon.net
Topic: 932 Message: 932

Seen a couple of Comal Co sheriff cars running around College Station today (Sunday). Anybody know what their simplex freq they might be running? 154.950 maybe? Only noticed one ant on the car. Looked like a vhf high band ant but to me it looked longer than your standard 5/8 wave vhf ant, so maybe low band?

AUSTIN APPROACH: 118.8(355-175) 317.65(355-175)
119.0(176-354) 370.85(176-354)
AUSTIN DEPARTURE: 118.8(355-175) 317.65(355-175)
119.0(176-354) 370.85(176-354)
CLEARANCE DELIVERY: 125.5
CLASS C: 118.8(355-175) 317.65(355-175)
119.0(176-354) 370.85(176-354)

Any frequency between 225-400 Mhz is the military aircraft band. The tower will transmit on 121.000 but if a Military aircraft, such as US Customs helicopter calls the tower they will be on the Military side which is 281.500 MHZ AM.

I believe the numbers in parenthesis are the degree of radial out from the airport.

Small aircraft will contact Clearance Delivery on 125.500 prior to departure to get weather information and advise their flight plan.

If you are close enough to the airport.. you will hear a recording over and over again called ATIS, which give weather info, wind speed, temperature and runways in use. and any other information.

Not sure about Class C. I know this airport is so small that they have separate frequencies for approach and departure but everyone is all pretty much on the same frequencies.

Topic: 952 Message: 952

Yes, the formally based Austin's Critical Air 11 is now at the Georgetown Municipal Airport. They have been there for about 2 weeks. They said the heavy air traffic and the ABIA control tower prevented them from being able to make certain calls without having to go way around the flight path. Also conditions were crowded at Brack with STARflight and all the other helicopters fighting for space. I think they put them in Georgetown to try and get more business from Williamson County since they tended to prefer to use Medivac from Scott and White.

So now we have Critical Air 10 in Marble Falls and Critical Air 16 in San Marcos. All of which are working off the 460.825 repeater using local relays. The Dispatcher is still in San Diego, CA using a phone line to connect to the repeater. Just this weekend alone, they use 2 Critical Air helos and STARflight last night in Cedar Park and this morning in Florance for major accidents. Let me know if you have any numbers for any of the other aircraft. Also all helicopter maintenance is currently being performed in New Braunfels at the airport and that also may move to Georgetown if they get permanent space there.

956. Saturday night

Yahoo group: CenTexComm
Date: 2002-04-08 04:25:48 UTC
From: Robert Barker
Topic: 956 Message: 956

Yes I was listening Saturday night and things got out of hand real quickly on APD Ch 12. The first thing I heard was that AFD wanted assistance with crowd control at "The Vibe" club because they were apparently over capacity inside. So by the time APD got there.. they were also calling for TABC.. One of those agencies decided that the club needed to be completely shut down and I think that was TABC's doing. More police were called and the crowd got ugly and began to throw glass bottles. About that time they starting to Hold over the shifts in all the sectors and began asking for units to come downtown after they were getting off about 2AM. Soon after that, a female officer on George Ch 12 said "shots fired" and the radio went crazy after that.. They were screaming for more officers and they came from all over the city. The initial shots fired was given a code 4 - under control but they said the crowed was out of control. They had units come from everywhere and they began forming their CMT - Crowd Management Teams and doing the thing with the glass face shields. I know they asked for EMS several times for people sprayed by mace so I know they were using it on people. I also kept hearing them referring to the MAC 5's or something like that and I figured it was a powerful gun and possibly a Less Lethal gun (rubber bullets).

I got pretty scared from way up here in North Austin just hearing those officers screaming for help saying shots were being fired into the crowd. It is not a night that I would have wanted to be an officer. It sounds like things were pretty scary for awhile there and I don't understand why the crowds will not clear out an area that APD is trying to clear out. Seems like everyone is just drunk and wants to fight the cops and don't realize things are being done for their own safety. As Ryan pointed out, this was about the exact same scenario as what happened during Mardi Gras last year so I'm sure the public will come forward about how brutal APD was in handling the situation and how they were just maceing people at random. Unfortunately APD usually doesn't comment on their side of the events and it usually makes them look bad. We will have to wait and see what they say about it. All I know is what I heard on the radio was that they didn't have near enough officers and near enough control of that crowd and for a few moments, things there totally out of control. It seems in recent years that APD has kind of lost control of crowd and does not maintain the order that they used to have years ago during past celebrations like Halloween. They used to be really strict, making people stay out of the streets and keep them all moving and usually all in one direction and now they just let the crow do whatever they want which usually ends up in fights breaking out.

John,
The APD SUV could be one of several units. The Expeditions without overhead lights are typically sergeant's units (90 series units on the radio. Example Adam 190). Expeditions with overhead lights are usually the License and Weight units. (LW units on the radio.) If it was an Explorer, it was most likely a park police unit. The City Marshals are under the authority of the Municipal Court and serve class "c" warrants for unpaid municipal court tickets. In addition, they handle the "boots" for unpaid parking tickets. They ID on the radio as CM.
Sounds like they had a stolen car or something good - good enough for everybody to get involved.
And FYI - it's Code-4. Not signal 4.

You should hear the patrol officers using callsigns that show what sector they are assigned to (i.e. Charlie 35, David 52). The 400 units are the Sr. Sgts and Sgts. This is a mix of Patrol and other functions in the department. The 300s are the Lts, while 500s are the Capts. Chief Conner is 100.

If a Patrol Officer is assigned to another sector, then he will keep his number but change the letter to reflect the new sector. Sometimes if they are covering for one night, they might not change but usually they do to help out the dispatchers. On a busy night you will hear officers move between North and South Command depending on call priorities (Generally you will hear them head South). If a unit is working a special assignment they will use their regular call sign, even if they are working in another sector (i.e. out at Dell or at the Dell Diamond).

FYI, Now that the ball season is started you will hear the officers working at the stadium on RRPD Training group.

972. City of Austin 800 Mhz Trunked System Control Channels are on the air !!

Yahoo group: CenTexComm
Date: 2002-04-18 23:36:36 UTC
From: Robert Barker
Topic: 972 Message: 972

I'm picking up two Control Channels that are licensed to the City of Austin.

866.1375 is very weak and scratchy from my location in North Austin
866.6125 is much stronger.
SEARCH RANGE 866.0125 to 868.8875
Anyone who has trunker, If you can monitor and see if you can give us any information on the system.

This is supposed to be an APCO 25 System. (Digital)

To see the frequencies in the system search the callsign WPQY813
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/call_res.hts?db_id=19&rows=&callsign=WPQY813

It doesn't sound like the control channel on the Bastrop System (406.525 or 406.800) which seems faster

From: georgejoos
Topic: 969 Message: 974

Go ahead and check out the files section for this group. There is a folder in there for Williamson County where previously I have the talk groups based on my trunker runs for Williamson County.

6736 is TAC3 for RRPD (FD has their own tac channels)
6768 is TAC4 for RRPD

Generally, but not always, TAC1 is used for incidents in Adam. TAC2 for Baker, TAC3 for Charlie, and TAC4 for David.

1652 is not a real talk group. That tends to show up on some scanners when there is an emergency button pressed on a radio currently on North Command. There are various status bits that the system sends out that some scanners actually decode as part of the talk group (does make it a little hard to monitor at times, especially if you use scan lists). Generally if the talk group can not be divided evenly by 32 (some system by 16), then it is not a real talk group but one with status bits. Since emergancy is a 4 in the status, then 1648 + 4 = 1652.

Check out Lindsay page out for lots more info on this (http://www.trunkedradio.net)

987. 2002 ABIA Airport Simulated Emergency Drill May 4th

Yahoo group: CenTexComm
Date: 2002-04-24 17:59:12 UTC
From: Robert Barker
Topic: 986 Message: 987

http://n9yfk.home.texas.net/tcares/Pages/2002abia.htm

The event will be held on Saturday morning, May 4th
from 0730 Hrs until 1300 Hrs. It involves a simulated
plane crash at the airport with multiple victims. The
drill involves voice and packet at all 9 hospitals
locations, Red Cross, EOC, and several airport
locations. Voice locations at Airport will need to be
done by HT with a couple of possible exceptions.
There will be two separate components to the drill,
the Hospital side and the ABIA side.

ALL VOLUNTEERS NEED TO REPORT TO THE TOKYO ELECTRON
PLANT AT 2400 GROVE AVENUE NO LATER THAN 0745 AM.

Frequencies:
Voice net for the Hospital net: 147.360 (T 131.8)

Frank,

Try these links for your journey to the Big H:

National Trunked Systems. Follow the links to the Texas Page and you will
find the Bastrop, LCRA, and Harris County links:
http://www.trunkedradio.net/

For the Houston area, several pages and links:
http://www.clarc.org/~kg5ai/freqs/freqs.html

San Antonio, Texas, Scanner Frequencies. Several counties have gone 800/900
since it was first published, but the info should be helpful:

http://www.picone.org/radio/index.htm

and,

kc4vjo@... has a Beta edition for Texas frequencies (it may be complete
by now for all I know),
my edition is about a year old. It is fairly complete for the Central Texas
area. I do not have the url,
but he may have a copy, pdf format, that he can send you. He does have a
BC-780 programming guide.
I appologize for not having his name, but, somehow, either it did not copy
last year, or was
lost in the great XP upgrade disaster.

Happy Scanning,
Ben

From: Chris Howell
Topic: 990 Message: 990

wilco appears to have added a 12th freq to thier trunked system. trunker showed 855.7125 today. i put it in another fm scanner and sure enough, it's a trunked freq.

anyone already know about this??

Carp test begins today in Lake Austin
By Dick Stanley

AMERICAN-STATESMAN STAFF
Monday, April 29, 2002

Twenty-five sterile Asian grass carp, with implanted radio transmitters, are to be released into Lake Austin this morning in a test to see if the fish will stay in the lake.

The travels of the carp, which eat the thick, ropy hydrilla weed that has clogged more than 400 acres of the recreational waterway, will be monitored for six months to see if they will resist riding runoff from big rains downstream into Town Lake and the Colorado River.

The city, which owns Lake Austin, is paying $26,000 for the research by the Texas Parks and Wildlife Department and Southwest Texas State University. The Lower Colorado River Authority is providing the radio transmitters and plans periodic water releases from Lake Travis to simulate storm runoff.

"We expect preliminary results by late summer," said Lynne Lightsey, a spokes- woman for the city's Watershed Protection and Development Review Department. She said it hasn't been decided how many carp have to stay for the study to be declared a success.

Parks and Wildlife officials don't expect many carp to linger, but lakeside residents organized as the Friends of Lake Austin are counting on buying thousands of them before the end of the year as part of a plan to control the weed. The group is preparing a comprehensive control plan, which includes use of a federally approved herbicide, to submit for state approval.

"I expect the carp will stay in the lake," said group president Vance Naumann. "But I don't think 25 is a sufficient number to really prove anything. Put a couple of thousand in there, and we can have a real test."

Even 25 carp are controversial with fishing enthusiasts, who consider Lake Austin the finest lake for largemouth bass in Central Texas. They fear the carp, which grow up to 3 1/2 feet long, will consume other vegetation that support the bass.

The prospect of thousands more carp makes Dan Taylor, a bass fisherman and systems manager for an Austin Internet company, cringe.

"The eradication of plant life (and other aquatic animals) will turn the beautiful and clear Lake Austin into another turbid mud hole," he said.

From: Chris Howell
Topic: 992 Message: 994

well, i added the 855.7125 freq to lindsay's page after i sent the email. i didn't realize that he updated that fast!

the 855.7125 freq is another trunked freq. acts the same as the rest. it explained some missing traffic i was not getting.

another note, trunker has NEVER shown 860.9875 to have ANY traffic at all over the life of the wilco system. for those not familure with it, you set a scanner on the control channel and trunker reeads the control channel and displays the other freqs as they are used. over 3-4 years (or however long wilco has been up) 860.9875 has never displayed.

If I noticed something like that, I'd have a strong suspicion that either they use it as a simplex channel of some sort for car-car, use it at the jail, or for SWAT.
In the Houston area, frequencies are at a premium and for someone to be wasting a licensed channel is very unlikely.
If you can, I'd program that freq in conventional mode and see if you ever get any hits on it locally (besides when the band opens).
It's possible that it may even be used by some other agency by permission and FCC records would never reflect that. Some agencies in the DFW area have swapped trunked freqs but those ultimately got changed in the records.

Tomorrow night Tues May 7th at the montly ARO (Austin Repeater Organization) meeting, Mike Gibbons of LCRA will talk about the different Microwave, fiber and trunked radio activities LCRA makes available to its served agencies.

This meeting is held at Luby's Cafeteria on North Loop off Burnet Rd. Usually people will go early about 7m and eat and then stay for the 730pm meeting which is held in the back "conference" room. I think this will be very interesting so I plan on attending.

This is a group of local hams that meet once a month.. They usually have a pretty big group that fills the room.

ARO 1st Tue 7:30PM North Loop Luby's off Burnet

1002. Pursuit Last Night - Long post

Yahoo group: CenTexComm
Date: 2002-05-10 15:00:45 UTC
From: Robert Barker
Topic: 1002 Message: 1002

A most incredible pursuit last night which lasted over an hour and was actually a 4 hour ordeal. Thanks to Ryan for alerting me to it via yahoo messenger. This is the same guy who caused a SWAT callout about a month ago in front of his girlfriend's house on Ave G in Hyde Park (central Austin). You would have thought he will still be locked up. This time he was driving down I35 south saying he wanted to die by having a Cop shoot him.(suicide by cop) They spotted his vehicle and the chase was on with Air 1 in the Sky calling it. They somehow managed to get over to S. Congress and took it to Ben White and turned right going West on Ben White and staying on Loop 360 all the way to about Spicewood Springs where they finally managed to spike one of his tires.. at one point he stopped the car like he was going to get out so SWAT was called but then he started moving again. He had already stabbed himself before the chase began and he was heavily armed with supposedly over 1000 rounds of ammo. He got back onto Research and went East back to I35 then south again and back to Hyde Park because he wanted to die in front of his girlfriend's house.. 460.450 (Baker radio) was used for the pursuit the entire time while SWAT coordinated on 460.500. I'm not so sure that using 2 channels was a good thing.. and I don't understand why the other sectors will not monitor the pursuit on their handhelds because they keep asking the dispatcher to relay their location and any time location get relayed there is a HUGE delay.
because by the time he exited I-35 he was driving on Rims and his car was on fire. They had called for AFD but he was still moving. AFD dispatched an engine but the engine got to the original RA location (Airport and I35) and didn't find it.. at the same time.. APD was screaming for AFD because he had pulled into the HEB parking lot at Hancock Center and his car with the 1000 rounds of ammo was on fire and he wasn't getting out of the car.. APD relayed another request to AFD to "step it up" but AFD seeing the new updated location cancelled the original engine and dispatched another engine that was a closer Box district to Hancock Plaza. Once again a huge delay on AFD's part by not being kept up to date that this was a moving vehicle on fire.. I think APD could have been updating them better and once again you have people in

communications that are following the CAD instructions to send the engine for that district and ignoring that the other engine was only less than a mile away and on the freeway already. (Common sense not allowed - must follow computer - computer knows all)

So basically the vehicle (the evidence) burned and by the time AFD got there..they backed off because of the scare of all the ammo exploding. wow what an ordeal. but it wasn't over yet.....

They put the guy in the ambulance and two officers rode with him to Brack. One of those officers was an Adam officer who must have joined the pursuit somewhere along the way. So he comes up on Adam radio and is very hard to understand due to the sucky radio system and the fact that he's downtown and trying to hit Adam voters (bad choice for channels) and he says he needs officers to assist at/in the back of the ambulance.

It takes about 4 or 5 repeats to understand him and Adam dispatcher keeps telling him to go over to Baker Ch and relay his request.. he doesn't so they finally do a GB on Baker saying the officer needs officers at the back of the ambulance (huge delay in relaying this info.. of about 3-4 minutes).. The officers at Hancock tell the dispatcher that the ambulance has already left so they assume it's old info.. What they didn't understand was that the guy in the back of the ambulance became combative while on the way to Brack and that is why the officer was calling for help.. But his handheld on 460.100 in the back of the ems unit was just not getting out and EMS didn't think about asking for help VIA their radio to their dispatcher (Hey the EMS unit can come up on the APD channels and ask for help, but that would require some thought on their part, plus they are busy so it's understandable)

All in all it was very interesting listening and of course from my position, it always seems like things could have been really simplified by having enough people to properly relay to the different agencies (DPS could have assisted with Spikes) to get the appropriate resources there (AFD engine and EMS should have been called to follow the pursuit at a safe distance knowing that the car was on fire and that the suspect had already stabbed himself so as soon as he stopped, they needed to be on the scene.) Or well, perhaps if they were all on the same channel for this incident, they would have been totally up to date on

it.

I hope everyone was able to tune in to hear it all and
I'm sorry about send out so many pages on IPN..
Actually I had my friend helping me with this.
Overall very interesting and exciting listening and
that's why I love this hobby so much. I just feel
helpless listening to it all and wished I could have
made some phone calls to help them out.

1014. Hwy 29 accident

Yahoo group: CenTexComm
Date: 2002-05-14 14:46:32 UTC
From: memo124
Topic: 1014 Message: 1014

18 wheeler propane roll over between Hwy 29 and Seward Junction. One vehicle involved no leak.

1016. RE: [CenTexComm] Fiesta Texas Frequencies

Yahoo group: CenTexComm
Date: 2002-05-14 21:07:16 UTC
From: Nicholas McLarty
Topic: 1008 Message: 1016

I used to work at Fiesta Texas as a dispatcher and returned there as a guest after coming to work for the PD and almost got rejected from entering with a radio (yeah, it was tuned to their freqs) until I told them it was a FRS radio... So, if you can convince the guy making $6.00/hr. at the gate that's what it is, you should be fine. Anyway, the frequencies as far as I can remember from 1998 (I believe most are still the same):

All channels DPL 465

Repeated Channels

Maintenenace/Ride Ops 461.100
? 461.125
Front Gate Ops/Marketing 463.700
Security/Safety 464.850

There are I believe 10 other simplex frequencies in use as talkarounds.

Call me skeptical, but it seems like everyone knows someone who has a friend who was removed from a theme park for possessing a scanner. Yet, I've never met anyone personally who had this happen and I've taken my scanner to numerous theme parks without incident.

Maybe these are the same people who wake up in a bathtub full of ice with their kidneys removed.

1021. Frequencies not used in the WCSO system

Yahoo group: CenTexComm
Date: 2002-05-15 14:14:38 UTC
From: Robert Barker
Topic: 1021 Message: 1021

Just a suggestion for those who monitor the Williamson County system. If 857.9875, 860.9875 and 855.2125 are NOT part of the trunking system, then you would want to program these frequencies into your Trunktracker as conventional frequencies. In other words, do not program them while in the Trunking program mode or else the radio will never receive anything on them if they are indeed simplex.

I'm not sure how the Radio Shack models work and if that would be the same.

I'm also not so sure that the old VHF frequencies are not being used.. I think I still hear traffic 154.860 from time to time which was their car to car frequency.

The new Radio Shack scanners use the control channel to tell the scanner what to do. If a frequency is not controlled by the control channel. You need to program it in FM mode.

From: Frank E Jacks, Jr
Topic: 1025 Message: 1025

Beginning with early this morning (by 5:30am or so) I have noticed that a small plane has been flying in circles over my area of town - northwest Austin; Lakeline Mall; Anderson Mill. It was circling at least until 7:00am when I went to work. And just now I've returned home to see it still circling. Does anyone know what this is all about?

Topic: 1028 Message: 1029

Robert,
Maybe, but the plane never seems to go south, or east for that matter. And I wouldn't think that Metro traffic would actually be flying at 10:30pm at night - the time I left Wal-mart last night and still observed the plane flying in circles. I also don't recall this pattern of flying until yesterday morning.
You certainly know way more than I do regarding this hobby of ours ("strange hobby" according to my wife - unless of course something is happening in our neighborhood, and then it's a great hobby, but that's another post/thread for another day), but this just doesn't seem to be what I would think Metro traffic would do.
John, you live out in my neck of the woods (Anderson Mill), have you noticed this plane and flying pattern that I've been observing?
Oh, well.....
Frank

From: Robert Barker
Topic: 1028 Message: 1030

Yeah, Metro Traffic would not be running at night..So I have no idea other than there is a very small hidden airport at Parmer Ln (FM 734) and that County Rd which on the other side is Harry Man Rd. (182? Cypress Creek)

I'm starting to fool with Trunker and eTrunker so if anyone has files from this program, I'd be interested in checking it out.

The DEA here in Houston does aerial surveillance with fixed-wing AC.
Check the 418 MHz band or VHF federal band 164-166 MHz area.

Subject: [CenTexComm] Small Plane over NW Austin

Beginning with early this morning (by 5:30am or so) I have noticed that a small plane has been flying in circles over my area of town - northwest Austin; Lakeline Mall; Anderson Mill. It was circling at least until 7:00am when I went to work. And just now I've returned home to see it still circling. Does anyone know what this is all about?

Is there a Flight School at the airport? Or, if there are any gas
or petroleum pipelines in the area, possibly the plane could be
checking the line(s), a junction, or a pump station.

Topic: 1036 Message: 1036

Wow, it's been a busy scanner weekend..

Cedar Park has been working their go-cart races on their PD Tac 1.

Right now on Sunday Night, there is a large gathering of kids at Wooten Park and Anderson Ln.. I had no idea that was such a popular place.. they are calling for units from other sectors and Air1 to break it up . Anyone know what this is about.

Last night on Saturday I was listening to all the LCRA rangers yack and yack on I-Call.. they went on form about 11pm to about 1 am non stop talking,, there were at least 4 ranger boats in the water on Lake Travis after 11pm. I suspect they will be at it again tonight.. when it gets late if are in that range.. just take the radio out of trunk and lock out the control channels and you can hear them on I calls.

1038. Lake Travis Frequencies

Yahoo group: CenTexComm
Date: 2002-05-27 14:51:13 UTC
From: Frank E Jacks, Jr
Topic: 1038 Message: 1038

We were thinking of going out to Lake Travis and/or Volente Beach today. Never having been out there with a scanner, who patrols and "governs" on Lake Travis? Is it some form of the LCRA? And if so, which of the many systems do they use, and what are the talk groups?
Thanks,
Frank
NW Austin

Oh, and thanks to everybody who chimed in on the airplane flying out over my neck of the woods earlier last week. Whatever/whoever it was, it finally stopped.

1039. Lake Travis Frequencies

Yahoo group: CenTexComm
Date: 2002-05-27 15:41:34 UTC
From: Robert Barker
Topic: 1038 Message: 1039

Lake Travis, is patrolled by Travis County Lake Patrol on 155.310 (can monitor the input on 156.09 if you are in the area)

They ID as Lake Patrol 30, etc

Also, LCRA is on the lake too.. they ID as River 30, or any River designation.. LCRA talks to each other on LCRA 900 They run DL numbers on with their dispatcher "Burnet County SO" on the same 900 talkgroup 02-074. They also have high band radios and talk to TCSO and the Parks units on 154.950 or on 155.310. Parks and Wildlife has a radio on this system also for when they need to run a TX number of a boat. If you don't have a Trunktracker.. then monitor the inputs to the tower.. The Lago Vista Tower should be the closest one to all the action. Inputs are 39 MHz below the posted outputs.

908 Lago Vista 935.2500 936.6750 937.7000 938.7000 939.7000 935.1375 936.9625 937.6750

Inputs 896.250, 897.675, 898.700, 899.700, 900.700, 896.1375, 897.9625, 898.675

Still looking for those Simplex Frequencies that they might use.

Also, Parks and Wildlife is on the lake too.. yesterday I was in my jet ski at Lago Vista and got passed by a TP&W boat.. that said "Game Warden" on the side of their boat.. I guess they would talk to their dispatcher on 151.415 but I haven't heard them much at all.. I know they have the other high band channels. You should monitor that and 151.265 which is the input to all the 159.270 repeaters all over the state.. There is a weird echo when she transmits on that frequency.

Also you should definitely listen to Travis County Parks.. 159.315 is non stop radio traffic all weekend.. they are their own agency and they have Park Rangers, etc. They have a direct simplex channel on 159.240 which you should also monitor.

Volente Fire is 154.190 which is near Volente Beach.. I don't know what else Volente uses. There are also a lot of Marine frequencies in use that the marinas talk to their rental boats on.

Shades is a very popular floating restaurant at Point Venture that offers a water Taxi to the other side of the lake to Lakeway and they are on 157.125, Marine Ch 82 I think?

Yahoo group: CenTexComm
Date: 2002-05-28 01:44:55 UTC
From: bpckty1
Topic: 1041 Message: 1041

Just got back from a holiday weekend at New Braunfels. One interesting note, the published frequencies for NB were not correct. These are the frequencies I found to be active. I believe this to be the correct (or close to it) LCN:

LCRA Comal - C1 935.5000/EDACS
LCRA Comal - C2 936.4500/EDACS
LCRA Comal - C3 937.8875/EDACS
LCRA Comal 937.4000/EDACS
LCRA Comal 938.4000/EDACS
LCRA Comal 936.9000/EDACS
LCRA Comal 939.4500/EDACS
LCRA Comal 939.4250/EDACS

New talkgroups found:

638/04-154 New Braunfels PD Admin
used as a car-car channel.
2035/15-143 PD/SO Patch?

Also, vhf is still being used:

PD New Braunfels 155.1900/203.5 occasional link to 633/04-151
PD New Braunfels 155.3100/203.5 River Operations
SO Comal Cnty 1 155.5950/203.5 Simulcast w/1369/10-111
SO Comal Cnty 2 156.0000/203.5 Occasional transmissions
SO Comal IC C-C 154.9500/CSQ Guadalupe River Ops

Schlitterbahn Water Park and Resort:

1 452.1250/D432
2 464.8250/107.2
x 464.7750/107.2
x 464.6125/107.2
Rides 467.7625/107.2
x 467.6125/ FCC info, no transmissions heard

1042. RE: [CenTexComm] New Braunfels Trip

Yahoo group: CenTexComm
Date: 2002-05-28 02:48:20 UTC
From: Lindsay C. Blanton
Topic: 1041 Message: 1042

bpckty1,

It appears that from your location you were monitoring the Sequin site
in Comal County, which also services the New Braunfels area. There is
another Comal County site which is at the center of the county. The
Sequin site is located a little farther south but still provides
coverage for NB.

Thus, the site that you have listed below is actually the Seguin site,
with the "Comal" site being a different one entirely.

Comal being:

Comal County 935.7000* 936.7000* 937.2500*
937.7250 939.9375 936.9500 937.4625
937.8875 938.1750 939.4250

Seguin being:

Seguin 935.5000 936.4500 937.8875 938.4000
939.4250 000.0000 937.4000

Many thanks for the talkgroup updates!

Warm regards,

Lindsay

From: bpckty1
Topic: 1041 Message: 1043

Well,

I could not receive any of the New Braunfels LCRA frequencies from my monitoring points near downtown NB, Gruene, Landa Park, and near the very important Walmart/HEB hub on I-35, but interestingly, Boerne and San Marcos came in fairly strong. My LCRA prinout does not include any SEGUIN frequencies, so I was unaware of their existence. And, amazingly, I listened to the NBFD while in Schulenburg.

1044. LCRA from New Braunfels

Yahoo group: CenTexComm
Date: 2002-05-28 03:42:57 UTC
From: Robert Barker
Topic: 1044 Message: 1044

According to Lindsay's site at www.trunkedradio.net
there are several possible sites that you might could hear from New Braunfels:

305 Seguin 935.5000 936.4500 937.8875 938.4000 939.4250 000.0000 937.4000

927 Comal County 935.7000* 936.7000* 937.2500* 937.7250 939.9375 936.9500 937.4625 937.8875 938.1750 939.4250

928 San Marcos 935.4625 935.9250* 937.9750 939.1500 939.5000 935.3875 935.9750 937.9500 938.5000 939.8875

However The Seguin site, as listed seems a bit strange since the next to the last frequency is 000.0000

Lindsay, does this frequency have to be blank to get the Trunktracker to work right?

On another note, we have some bad weather moving across Central Texas and ironically, on the anniversary date of the Jarrell storm, the Austin NOAA transmitter on 162.400 went completely off the air for about 15-20 mins about 10pm.

1045. Re: [CenTexComm] LCRA from New Braunfels

Yahoo group: CenTexComm
Date: 2002-05-28 04:34:14 UTC
From: Myles Barkman (secondary)
Topic: 1044 Message: 1045

For the missing freq in the Seguin listing, I found 936.900 MHz fills that slot just as Ben had found.
On my trip(s) to New Braunfels, I could not even hear the "Comal County" site. I mainly used the Seguin site.

Ben, which of those Schlitterbaun freqs were repeaters and what "FCC info" did you have since I found nothing listed for 467.6125 MHz.
The only freqs I could find licensed for Schlitterbaun were 464.775 and the new 452.125.

I have a list that I made just for the New Braunfels area which I've updated with Ben's info.
You can see it at http://www.clarc.org/~kg5ai/freqs/newbraun.html

They are also listed by the FCC as Water Park, if I remember
correctly, and the 467.7625 is Motorola J Dot/Spirit Channel 3. I
just stumbled across it while scanning/searching frequencies near
the Schlitterbahn. I did a city search on the FCC gullfoss site and
found the repeater channels (452. and 464. freqs). The frequency,
467.7125 is FRS, but, someone is using it somewhere on the property.

From: Lindsay C. Blanton
Topic: 1044 Message: 1049

The reason for the original 000.0000 in that slot was at the time we
determined the initial LCN settings for the Sequin site, that LCN was
disabled or not programmed into the site.

Many wide area EDACS system will have disabled LCNs, thus the 000.0000.

Thanks to the list and BPCKTY1 for id'ing the additional LCN.

Warm regards,

Lindsay

1052. Re: [CenTexComm] Lake Travis Frequencies

Yahoo group: CenTexComm
Date: 2002-05-29 20:10:44 UTC
From: Chris Howell
Topic: 1038 Message: 1052

a few notes on travis county parks (my part-time job). parks has rangers, park tech ii's and park tech i's. rangers are peace officers (tcso deputies actually) and have radio numbers with 0 or 1 as the middle diget (312, 305, 114, 211, ect). tech ii's are supervisors and most are emt's or paramedics. thier unit numbers have a 5 in the middle (251, 350, 255 (me), 150, etc), tech i's are fee booth staff (non-ems) and have unit numbers with 6, 7, 8 or 9 in the middle. park maintainance has 3 in the middle.

tech i's are assigned to one specific park and stay thier for the shift. they patrol the park and take entrance fees in the booths. tech ii's are in pickups (white with the park logo on the door, light bars and sirens, etc) and patrol/supervise the area parks (mansfield dam, tom hughes, hippie hollow, bob wentz @ windy point, sandy creek, cypress creek, arkansas bend and pace bend. they supervise tech i's and respond to ems calls in (or somestimes near) the parks.

tnr ch 1 is used for most of the in-park operations and ch 6 for park to park or system wide use. ch 1 is 159.24, ch 6 is 159.315. ch 5 is "reserved" for rangers but never used for that. rarely used at all, starting to be used for in-park ops (153.80).

parks ems responders are part of the lake travis task force and carry pagers that are activated on county ems channel for the task force. parks northwest or parks southwest can also be toned out on county independant of the task force.

parks can be very active and chock full of information as we are very good at monitoring multiple channels and coordinating the info on ch 6. hopefully that's some good information for you. chris

Subject: [CenTexComm] Lake Travis Frequencies

Lake Travis, is patrolled by Travis County Lake Patrol on 155.310 (can monitor the input on 156.09 if you are in the area)

They ID as Lake Patrol 30, etc

Also, LCRA is on the lake too.. they ID as River 30, or any River designation.. LCRA talks to each other on LCRA 900 They run DL numbers on with their dispatcher "Burnet County SO" on the same 900 talkgroup 02-074. They also have high band radios and talk to TCSO and the Parks units on 154.950 or on 155.310. Parks and Wildlife has a radio on this system also for when they need to run a TX number of a boat. If you don't have a Trunktracker.. then monitor the inputs to the tower.. The Lago Vista Tower should be the closest one to all the action. Inputs are 39 MHz below the posted outputs.

908 Lago Vista 935.2500 936.6750 937.7000 938.7000 939.7000 935.1375 936.9625 937.6750

Inputs 896.250, 897.675, 898.700, 899.700, 900.700, 896.1375, 897.9625, 898.675

Still looking for those Simplex Frequencies that they might use.

Also, Parks and Wildlife is on the lake too.. yesterday I was in my jet ski at Lago Vista and got passed by a TP&W boat.. that said "Game Warden" on the side of their boat.. I guess they would talk to their dispatcher on 151.415 but I haven't heard them much at all.. I know they have the other high band channels. You should monitor that and 151.265 which is the input to all the 159.270 repeaters all over the state.. There is a weird echo when she transmits on that frequency.

Also you should definitely listen to Travis County Parks.. 159.315 is non stop radio traffic all weekend.. they are their own agency and they have Park Rangers, etc. They have a direct simplex channel on 159.240 which you should also monitor.

Volente Fire is 154.190 which is near Volente Beach.. I don't know what else Volente uses. There are also a lot of Marine frequencies in use that the marinas talk to their rental boats on.

Shades is a very popular floating restaurant at Point Venture that offers a water Taxi to the other side of the lake to Lakeway and they are on 157.125, Marine Ch 82 I think?

1053. Travis County Parks 153.800

Yahoo group: CenTexComm
Date: 2002-05-29 21:03:17 UTC
From: rbarker@austin.rr.com
Topic: 1038 Message: 1053

Chris, I have heard little or no activity on 153.800.
I think it is because the repeater is very weak. I
think it's located in east Austin according to the GPS
Coordinates. Are they using the repeater or are they
using it simplex.
I had this listed as East Tac and the 159.315 as West
Tac which was given to me by Austin/Travis Co EOC.

1058. Austin Saturday events..

Yahoo group: CenTexComm
Date: 2002-06-01 15:54:48 UTC
From: Robert Barker
Topic: 1058 Message: 1058

Yes the Gay Pride Parade is tonight about 8pm ish.. but I don't think that will be a big deal cuz they are just going from Riverside/Congress up Congress to 4th street and then left on 4th street to Wooldridge Square at 4th and Guadalupe. Most of those events are just using FRS (family radios). But APD will be used to shut down traffic on and probably on Ch 8. The Mayor Gus Garcia and (openly gay) sheriff Margo Fraiser will be the grand Marshall.

A friend and I did go down to 6th street last night about 2am. The motorcycle event was in full swing. I didn't see any real problems. Just your normal PI arrests. They seemed to be switching back and forth between Ch 8 460.500 and George Sector 460.475. They will be at it again tonight. There was no real violence that I knew of but there was a ton of cops.

If you are looking for summer frequencies to monitor, I would again recommend parks 159.315. This is non-stop summer activity on the lake. Also if you stay up late listen to the women on the horse carriages downtown 464.025.

Starting to get a lot of grass and brush fires.. last night the train went up Mopac starting grass fires on Mopac along the way.. AT one point they had 3 AFD trucks putting out separate fires

From: Catherine Keller
Topic: 1060 Message: 1062

Okay... real stupid question. I'm trying to program my handheld trunk tracker with the LCRA frequencies and you're supposed to go in a certain order. I'm real confused on if I'm doing this correctly or not.. I was looking at the frequency table for LCRA's system on a website.. there were columns labeled LCN-1 LCN-2 and so on. Do I enter in the column for all the frequencies within LCN-1 and then continue, in order, down each column sequentially... OR do I go across the rows... for instance, starting with Austin, do I enter in LCN-1, LCN-2 across the row? Does any of this make *any* sense whatsoever? ROFL!!

Starting to make more inquiries about LCRA's talkgroups, etc..

Topic: 1070 Message: 1070

Hutto PD usually operates on the Constable/JP talkgroup (3696) on the Williamson County system. Their units are in the 7900 series.

1072. Re: Hutto PD

Yahoo group: CenTexComm
Date: 2002-06-03 03:53:32 UTC
From: georgejoos
Topic: 1070 Message: 1072

I have heard them on 3696 before, but I am hearing them and other county PD's (like Granger and Florence) showing up on TG 4272. From time to time I hear traffic on Hutto PD's listed freq (155.8350). This is generally during the day time. If I were a Hutto unit and needed help, I would also probably put the broadcast out on the Williamson County net since there is more officers out there (even heard RRPD going out there one night to check on a Hutto officer when no county units were available.)

I also have Hutto listed as 7600 series units, with 7640 being the Chief.

1073. 409.0250 & 154.9650 - who are they?

Yahoo group: CenTexComm
Date: 2002-06-03 18:58:38 UTC
From: Frank Jacks, Jr
Topic: 1073 Message: 1073

Thanks for the response last weekend on the Lake frequencies. Those posts were very informative.
Now, I have a new question: I'm hearing something (probably a large corporation/business) on 409.0250. But I can't pin it down on who it is. Does anyone know?
Second question: What law enforcement/police department am I hearing on 154.9650? I can't seem to pin it down either.
Thanks!
Frank

409.025 is the Veterens Administration (or the IRS - I get confused).. at Ben White and I35. One is on that freq and I think IRS is on 164.175. Both are side by side. See even the Feds can't coordinate their frequency bands.

154.965 is supposed to be Road and Bridge Ch 2 for the City of Austin. Ch 1 is 155.760. However Smithville PD (south of Bastrop) has a transmitter on the input and the same tone as this repeater and has been coming through on this Austin repeater for several years now.

1076. APD using Talkabout FRS radios

Yahoo group: CenTexComm
Date: 2002-06-05 00:33:11 UTC
From: Robert Barker
Topic: 1076 Message: 1076

Well it's official . APD guys were talking on Ch 7 earlier saying "be sure those Motorola Talkabout radios are charged.. we will need them for tomorrow." I guess the system is so overloaded that they have resorted to using FRS radios for tactical stuff. There just aren't enough frequencies to go around.

so........ Round Rock is on Nextel for their tac.. and APD is on FRS.

1078. Re: [CenTexComm] APD using Talkabout FRS radios

I was by Bastrop yesterday and I heard maintenance
traffic on 453.475. I also programmed other
frequencies so I could check other working
frequencies. 159.390 Smithville EMS. 155.100 PD.
154.115 PD?

From: Chris Howell
Topic: 1038 Message: 1086

153.8 is ch 5 which is listed as rangers, but rarely used. it can be so worth scanning, but ch 6 (159.315) and ch 1 (159.24 simplex) are the most active for parks.

i'm not sure where the repeater for ch 5 is, i can hit the repeater from all the parks except sandy creek and lago vista.

1090. Bastrop County EMS

Yahoo group: CenTexComm
Date: 2002-06-10 12:03:05 UTC
From: Robert Barker
Topic: 1090 Message: 1090

Ok guys.. we have to get down to the bottom on this one.

Michael said "The listing I have for Bastrop EMS uhf is 454.8125 but I haven't
heard any traffic on that" How can this be.. this is a split that is right in the middle of the Mobile Telephone Aircraft band and I don't think is even a valid frequency. (not in Police Call)

then Jose swears he's hearing Bastrop EMS being paged on 454.425. This is in the middle of The (old) Mobile Telephone Band. And again.. no UHF splits are even authorized by FCC.

Now 454.425/3 which is possible is 151.475 and this could be a frequency we might expect to hear them on.

the above 454 findings have to be some sort of Harmonic, etc. I know Bastrop County is served by Rural Metro EMS on 159.390 and I think the fire Dept is on 155.040 right? Seems like the first responders would also be on 155.040 but not sure. I just can't believe he 454.425 is valid. It doesn't make any sense.. how in the world did yall even find this one. Searching? It's not listed in any directory and the according to the FCC the frequency doesn't even exist at all.

A somewhat similar situation with Critical Air and the other users on 460.825. That frequency, although valid for it's use, is only licensed to Delta Airlines at ABIA airport..yet the transmitter is off in Westlake Hills.

1091. Re: [CenTexComm] Bastrop County EMS

From: Aaron Slaughter
Topic: 1090 Message: 1091

Hey Robert, I'll throw another loop in this mystery for ya. Rural metro will soon be going to the Bastrop 800 trunked system. I believe they still primarily use 159.390 for paging and some first responders. You are right about the 155.040, this is the Bastrop County Fire-Net, and some first responders use this frequency. I haven't had a chance to plug in these UHF frequencies into my scanner, but I have heard Rural Metro dispatchers tell the units to go to UHF. The Frequency Michael has (454.8125) he got from me, cause I found it in the STARflight radio. Also, if you look in the FCC search page, Rural Metro is licenced for some totally different frequencies.... 159.390 is licenced to Bastrop County..... just my input on the whole thing.

1093. Bastrop County EMS

Yahoo group: CenTexComm
Date: 2002-06-10 23:17:05 UTC
From: fireman_mikey2002
Topic: 1093 Message: 1093

Elgin Dispatches only the fire(vhf) and police department(900) .For EMS calls EFD gets toned out on 158.995mhz by Elgin pd and the medic unit in Elgin is Rural Metro Medic 3 on 159.390mhz

1094. Bastrop EMS 454.425 or 454.8125 Noone is for sure

Yahoo group: CenTexComm
Date: 2002-06-11 04:10:38 UTC
From: Robert Barker
Topic: 1094 Message: 1094

"Aaron Slaughter" <pacrat551@...> said
I have heard
Rural Metro dispatchers tell the units to go to UHF.
The Frequency Michael has (454.8125) he got from me,
cause I found it in the STARflight radio. Also, if
you look in the FCC search page, Rural Metro is
licensed for some totally different frequencies....
159.390 is licensed to Bastrop County..... just my
input on the whole thing.

So you have heard them on 454.8125 and NOT on 454.425? because jose esqueda
<memo124@...> is hearing Bastrop EMS First Responders on 454.425

I have posted 2 of my common lists to the files area at:
http://groups.yahoo.com/group/CenTexComm/files/

There is a by-frequency list for Austin/Travis Co. A more easier to read format, Then Josh Mayson has his list posted which covers a much wider area, George Joos posted a Williamson County list and there is a DPS banplan list there too. Should be enough for everyone. And please let me know about any discrepencies

Rescue 26 @ Pedernales will have their station grand opening, Tomorrow 10am Saturday 22404 State Hwy 71 west

---

I'm being told that Air-1 may be using an 800 mhz radio on simplex for surveillances. Should check:
866.0125
866.0375
867.0125
867.0375
868.0125

also start searching 866-869 Mhz.

Have you ever talked on a digital mobile phone and lost the call? Hope The city's digital radio system will work better than my digital phone.

1113. Parade and Circus at Erwin Center

Yahoo group: CenTexComm
Date: 2002-06-25 15:41:31 UTC
From: Frank Jacks, Jr
Topic: 1113 Message: 1113

Does anyone have any information on the circus animal parade from the train to the Erwin Center? As I drove to work this morning, I noticed that some of the equipment trucks had arrived. But the fencing around the parking lot at 15th and the frontage road - that seems to be standard when they are here - was not up yet.
Also, I have a frequency listing of 151.6250 which I think I had found a few years back. Does anyone else have frequencies for the circus or can verify if this is actually for them an not something else that I've mis-labeled?
Thanks
Frank

1114. Circus on Congress Friday

Yahoo group: CenTexComm
Date: 2002-06-25 16:33:28 UTC
From: rbarker@austin.rr.com
Topic: 1113 Message: 1114

On Friday from 10am to Noon, Ringling Bros And Barnum & Bailey Circus and the Austin Museum of Art are celebrating the circus by having a ringmaster, clowns, trampoline, artists, and more who will perform LIVE on CONGRESS AVE. Following the entertainment, there will be fun art activities for children of all ages. The event is free to the public.

That was listed in last week's Austin Chronicle.

This should be a nice traffic stopper.

I don't have anything specific for the circus but Erwin Center is on 453.650, low power repeater.
And if APD blocks off streets, they will be on 460.500

They do normally set up "camp" in the parking lot of the Erwin Center. 15th and I35 across from Brackenridge Hosp.

1116. Williamson County Trunk is Down!

Yahoo group: CenTexComm
Date: 2002-06-27 03:03:33 UTC
From: georgejoos
Topic: 1116 Message: 1116

The system crashed just before 8:00pm tonight. The system has not even gone into fail safe mode, it is totally down. 154.8650 is getting a work out (the old country fire net). I am also finally hearing some traffic on the National Calling frequencies of 866.0125 & 866.5125.

I suspect Round Rock has fallen back on dispatch via Nextel.

It is now 10:00pm and the system is still down.

Yahoo group: CenTexComm
Date: 2002-06-27 03:52:15 UTC
From: georgejoos
Topic: 1118 Message: 1118

System came back up at 10:40 for about 3 minutes with lots of traffic,
but it is now down again with not even the control channel.

When it is down I heard the following traffic on the National freqs:
866.0125 - County (mostly sheriff, but EMS, Hutto, etc checking in)
Refered to as "Call"
866.5125 - EMS units
Refered to as "TAC1"
867.0125 - Round Rock PD

As I type, the system is back up again.

I did hear EMS 1 talking with another EMS unit commenting that the
Motorola folks where out working on the system.

1121. The 800 mhz common frequencies 866.0125...

Yahoo group: CenTexComm
Date: 2002-06-27 15:21:34 UTC
From: rbarker@austin.rr.com
Topic: 1118 Message: 1121

Last night 866.0125 and 866.5125 were a repeater..but they can be either.. These are supposed to be common frequencies.. so if say a San Antonio or a Corpus Christi unit were to come to Austin, they are supposed to be able to communicate with them on these frequencies.. but we all know how intercity frequenices go.. especially that the city of Austin doesn't monitor 155.37 or 154.950 like they should nor do they broadcast pursuits or robberies or officer needs assistance calls.

I suspect that APD may also be using these frequencies for survellance with Air 1. It's definitely time to put them in your scanners:
866.0125
866.5125
867.0125
867.5125
868.0125

All those 800 frequencies are known as NPSPAC
channels. The City of Austin/Travis Co 800 system
will have all five frequencies as conventional
repeaters strategically placed throughout the county.
Each agency with an 800 trunked system is supposed to
have at least 2 of the frequencies, one as a calling
channel, and the other as the talkaround once contact
has been made.

1124. State EOC Activated

Yahoo group: CenTexComm
Date: 2002-07-02 17:30:30 UTC
From: trebor1159
Topic: 1124 Message: 1124

The LCRA rangers on 02-074 just announced that the State EOC has been activated. The rangers will converge in Marble Falls and will either drive or be flown in to Kerrville to assist with high water and rescues. I-10 I reported to be underwater between San Antonio and Kerville. The State is sending 3 Army Blackhawks to that area. Also in South Austin US Hwy 290 outside of Oak Hill is also underwater.

Multiple road floodings at this time.

Anyone have Medina County freqs? For those that haven't seen they are questioning whether the damn at Medina lake will hold.

1137. LCRA River Update as of 9:20am Saturday

Yahoo group: CenTexComm
Date: 2002-07-06 15:00:11 UTC
From: rbarker@austin.rr.com
Topic: 1137 Message: 1137

From the 9:20am LCRA EM Briefing on patch 15-143

All The Highland Lakes including Lake Travis are now closed except for Lake Buchanan which is expected to close later today. This includes Inks Lake, Lake LBJ, LAKE TRAVIS, Lake Marble Falls, LAKE AUSTIN, Town Lake.

Lake Buchanan has 1 gate open; poss will have to open 2 more this afternoon. Current level is 1019'

Wirtz Dam has 1 full gate open

Starke Dam has 2 full gates and one partial open.

Mansfield Dam has 2 gates open (the 2nd was just opened at 10am, a 3rd will be opened at 2pm and a 4th will open in the next day or 2. Current Level on Travis is 692.83'

It will take 18-21 hours for this water to reach Bastrop who has a big Fireworks Celebration planned for tonight. They are Sitting on pins and needles hoping for a successful event.

The next EM Briefing will occur at 1pm today. Stay Tuned. This is cool stuff.

The main number for the LCRA EOC is 512-473-4072 you can leave a message.

In other overnight news.. it looks like a 4:30am fire destroyed the Black Cat Lounge on 6th Street in Austin. Also heavy damage to the 311 Club next door.

1139. Fire on 6th Street & Lake frequencies to monitor including Comal Co

Yahoo group: CenTexComm
Date: 2002-07-06 17:26:09 UTC
From: rbarker@austin.rr.com
Topic: 1137 Message: 1139

I missed the fire on 6th Street Last night (430am
today actually)

Black Cat is gone.. total fire damage
311 Club $10,000 damage
Scruffy's $5,000 damage
2way.com ?? $10,000 damage
Midnight Rodeo $1,000 damage

Interesting Lake Travis Frequencies to monitor while
the Lake Ban in in effect:

Travis Co parks 159.315
Parks direct 159.240
154.950 was used last night heavy for car to car/boat
to boat traffic between TCSO and the "River" (LCRA)
boats, during the Carlos N Charlies Fireworks.
464.925 Carlos N Charlies.

Radio traffic says the 4th Flood Gate on Mansfield Dam
may be open by 6pm today.

I aways from the Guadalupe River and Comal County but
I'm told the freqs to monitor for that area are:

151.250 Comal Co Fire Tac
154.295 Comal Co Fire / Rescue
155.595 Comal Co SO
156.000 Comal Co So

Anything else would be appreciated.

1143. LCRA River Update as of 4:00 pm Saturday; next radio update 9pm this evening

Yahoo group: CenTexComm
Date: 2002-07-06 22:12:59 UTC
From: rbarker@austin.rr.com
Topic: 1137 Message: 1143

Lake Buchanan is 1019' and falling. They have 1 flood gate open and expect it to be that way for a week. They are receiving flow from Brownwood.

Inks Dam is 890.36' and is going over the top of the spillway. Inks Lake will be closed as long as there is water flowing over the spillway.

Wirtz Dam has the equivalent of 3/5 of one gate open and water is at 824.26' they do not expect having to change this gate at this time.

Starche Dam is holding 736.48' of water. They have 2 full gates and 1 partial gate open.

Mansfield has 3 gates open and will not open another gate today. They are currently at 693.26'. They project the lake will crest at 694 Sunday Morning. They anticipate having gates open for the next 8 days.

Tom Miller Dam off Lake Austin Blvd is holding 491.51' but has 3 full gates open. This is allowing a significant flow onto Town Lake downtown Austin and I suspect the hike and bike trail is underwater in spots and anyone who gets into that water will have problems.

They are saying all water levels are below what they say in June of 1997.

The next EM Radio Breifing will occur at 9pm tonight and then another one scheduled for 9am Sunday morning.

These updates are being broadcast on the LCRA radio system. Talkgroup 15-143.

Was onscene there. STAR Flight, EMS, AFD (including the new Dive Rescue 1 -
a former Austin EMS ambulance repainted), and Park Police all onscene. The consensus was that the victim had extricated himself prior to AFD arrival.

1147. Water Rescue.... Zero Tolerance and 9am LCRA update; next update 630pm today

Yahoo group: CenTexComm
Date: 2002-07-07 14:22:35 UTC
From: Robert Barker
Topic: 1147 Message: 1147

Well they probably referred to "Zero Tolerance" meaning that even though they may have rescued them, they need to issued citations at the very least and/or arrest them. They have made it clear that people need to say out of the water and the thrill seekers keep going back for more.. and then they get into trouble and want the city to come rescue them. Also there are TONS of calls where someone thought they saw someone either float buy or jump off a dam to swim or just that a canoe turned over and they automatically assume the party to be in distress and they launch STARflight and all this other apparatus only to find out the there never was anyone in distress or there never even was a victim at all. I remember last week they were racing to what they thought was a man hanging unconscious off a radio tower and it turned out to be some rags or towels or something.

9am Sunday Morning LCRA EM net broadcast 15-143
Patch of 02-074 Ranger Admin and 02-154 EM Net

Lake Buchanan is 1019' w/ 1 flood gate open
they may open an addtl gate this afternoon or tomorrow depending on runoff from Brownwood

Lakes Inks, LBJ, Marble Falls, Travis are closed for Safety Reasons. Also Town Lake and Lake Austin are closed.

Wirtz and Starke gates are open.. Wirtz has 2 gates open, Starke has 1 gate open.

Pecan Bayou is expected to flood later on today.

Lake Travis is 693.41' Currently has 3 gates open flowing 22,010 CFS per second.

Tom Miller Dam 491.4' 3.5 gates open

Onion Creek at 183 peeked at 10pm Friday

Colorado River at Bastrop is at 15.9 and will crest to 22 ft later today

Colorado River at Smithville will flood later today

At La Grange 26 ft by Monday

At Columbus.. expected to reach 32 feet

At Wharton expected to reach 31 feet by Wednesday evening

At Bay City is 15 ft but will fall and rise back up by Thurs evening.

La Grange is the one closed to flood at this time.

Most of the weather system has been moving off but we could see another inch of rain over the surface area.

Roll Call:
LCRA Rangers
Travis County EOC - never has checked into the net
City of Austin - never has checked into the net
San Saba Co
Lampasas Co
Burnet Co
City of Highland Havens - always checks into the net
City of Granite Shoals
City of Meadowlakes - always checks in
City of Marble Falls
Lake LBJ PD
City of Cottonwood Shores - checked in today
Llano Co
Blanco Co
Village of Briarcliff
Lago Vista - checked in
Jonestown
Lakeway
Bastrop Co
City of Bastrop - checked in . Currently flow through Tom Miller Dam 25,000 CFS (cubic ft per sec)
City of Smithville
Fayette Co - checking in and evacuating low lying areas for 26 feet by Monday
Colorado Co
City of Columbus
Wharton Co
City of Wharton
Matagorta Co
Burnet Co dispatch confirming all lakes but Buchanan are closed.

Next Briefing at 630pm this evening

1153. Handhelds at the Stouffer Hotel in the Arboretum.

Yahoo group: CenTexComm
Date: 2002-07-14 14:51:42 UTC
From: Robert Barker
Topic: 1153 Message: 1153

I live off Mopac and Parmer Ln and I scan the FRS channels with an FRS base station. Starting last night I have been hearing some communications regarding a Youth Conference and I finally realized they are at the Stouffer Hotel in the Arboretum. I'm hearing their handheld radios (on upper floors I guess) from my house which is several miles away. They must be using some pretty high powered stuff and they can't be FRS radios but they are on FRS ch 3 462.6125. Just a huge group of kids.. they are throwing things off the balconies and they are sneaking out of the hotel and last night they were checking rooms. Lots of non-stop communications.

It's been a fairly quiet weekend so far. Lots of Lake Traffic on LCRA 02-074, I'm missing the updates so I don't know what the flood status is.. I know Lake Travis is open but not near Graveyard Point. There are 4 flood gates open at Mansfield. They closed one but I don't know why since houses are still under water and it's still raining.

APD Air-1 is back. It was gone for maintenance for about 2 weeks. They seem really bored and they keep flying over neighborhoods and circle and circle making people think something is going on. I guess they are just looking for crime. I had hoped they would use them to focus on the aggressive drivers along Mopac and I 35 that they were supposed to set up a task force on but I guess not.

1155. Re: [CenTexComm] Handhelds at the Stouffer Hotel in the Arboretum.

I work for LCRA; I can't *IMAGINE* how difficult a decision it is to make on whether to open or close the flood gates... the last time we had some really serious flooding, Mark Rose was on television having to account for either why they opened or closed the gates. In the time since the last heavy flooding, Water Services purchased some intense (and seriously expensive) modeling software that helps them gauge better what action they should take... I imagine that the folks in Water Services are working this weekend making some tough decisions. With the gates open, the folks downstream run the risk of serious flooding; with all or some of the gates closed, those closer in run the risk... it's a no-win position to find oneself in.

Topic: 1159 Message: 1159

Last night I caught the tail end of a pursuit by Travis County So on 155.310 They were chasing a guy coming in on Hwy 290 and in a matter of seconds he hit 3 vehicles causing three accidents. The officer said Notify APD we are headed into their area so I quickly locked another scanner on Edward radio 460.325. By that time the subjs in the vehicle (3 of them) were getting ready to bail. Finally the Edward dispatcher sent a unit to the intersection right as TCSO was announcing they were all bailing out of the vehicle. Edward told their officer to respond 10-18 .. Then some other Edward unit asked "do we know why TCSO is chasing them" He said no we dont.. and then officer said... "Well can we find out" and the dispatcher said Ok and I'm sure was talking to his supervisor.. The problem is that all this happens in seconds. TCSO probably called APD to tell them they were approachign the area but the APD Communications Supervisor would have to create a call in CAD. (which takes time)..You have to have a omplaintant and an address to create a call.. so it took a few seconds.. then they send the call to the Edward Disaptcher and he has to see it on his screen and assign it to a unit.. All this took a few seconds and he saw the update that they were bailing out right as he was broadcasting the call so he told his units to "step it up" and get there ASAP.. by then we had 3 guys running from on TCSO guy.. TCSO (coulda, woulda, shoulda) notified APD sooner.. and by the time APD arrived onscene they saw the officer talking the driver into custody.. and quickly accounced that he was in custody.. well he was but .. they didn't realize that 2 others had bailed and were still running. The officer probably went after the driver because that's the one that would have commetted the Traffic Offenses. APD was too quick to call it code 4 and They probably just gave up on the other 2 since they had plenty of time to get away. I did hear Air-1 come up on the air.. and at first they were told they were not needed (thinking it was all code-4) but when they heard about all the collisons which took another few minutes before the dispatcher started seeing them on his screen. It was only then that APD began to realize that this was a pretty big deal.

I have said it before and I'll say it again. These agencies are very lacking with it comes to communications.. They have intercity and if they would use it and if the officers would listen to it or at least their communications people, then perhaps info would be distributed quickly. Just think.. If I called you and tried to explain that my officer was in pursuit and we need some of your units to assist.. you would probably want to ask me 20 questions and that's exactly what APD was doing.. I never knew why they were running to begin with. It's interesting listening but also very exciting.

The amazing thing is that APD, AFD, and A/TC EMS have each other's primary channels programmed in their respective radios. Yet, officers, medics, and firefighters claim they are not allowed to use the other department's radio channels.

There was also a call (heck, I don't know exactly what sector) over by the Riverside/Faro area. My daughter's boyfriend called asking why the police helicopter was circling over his house; I told him I hadn't heard anything and that maybe they were just practicing... he calls back and says, "Nope... not practicing. An officer just came by our house asking if we'd seen some guy in shorts running around in our neighborhood." Not sure what the guy had done... I'm not sure they even got the guy...?

----- Original Message -----

I want to say that's Edward sector, but it might be David.

Anyway, anyone know what was going on? APD contained an area where a suspect was believed to be hiding. They got Air-1 in the air. A noticiation went out on the TCSO frequency about it (but I don't think they responded to the incident). Never heard why they were chasing this guy or if they caught him.

153.8 is ch 5 which is listed as rangers, but rarely used. it can be so worth scanning, but ch 6 (159.315) and ch 1 (159.24 simplex) are the most active for parks.

i'm not sure where the repeater for ch 5 is, i can hit the repeater from all the parks except sandy creek and lago vista.

1180. Flood Notes

Yahoo group: CenTexComm
Date: 2002-07-26 23:03:27 UTC
From: Davidlitsinger@aol.com
Topic: 1180 Message: 1180

Behind in checking my journals. Put computer in shop for a memory upgrade and disc wipe -- had a virus. Saved all my files and folders but lost my main address book, now having to load all my addresses anew. --
Two weeks ago Friday went to San Antonio, stopped by McQueeney on way down to visit friends and see how the flooding went. Notes were; Friday the 4th, water being let out of Canyon Lake was for benefits of the tubers, some comments were that my friends tend to think that the engineers ad Canyon Dam were either relly dumb or really caught off guard as to how much water was really comming down the watershed. By the time it started rising, REALLY FAST, and eventually over the spillway, it was a bit too late. -- Down at Seguin, the authorities started dumping water out of Lake McQueeney. Hurt Seguin badly, but actully saved much of the property on Lake McQueeney proper. My friends live right smack on the river, last place before the McQueeney Dam spillway. The Mother's place 4 years ago had abouty 5 feet of water in the house, took out viretually all the first floor -- kitchen, living room, etc. Bedrooms on 2nd floor survived, but had to rebuild everything on 1st floor. This year had about 5 - 6 inches !!! thats all, in the mothers house. The daughter and her family live right next door, but the house being a bit newer has built up slab about 15 inches higher off ground. No flood damage at all. they really licked out this time. Some comments typicall heard on Radio talk shows are "why rebuild where it will flood?" -- well if you could see the place, you would know why. Living right on the river, quite, peaceful, out away from the town, our own boat dock, fishing if you are in to that --- if you ever wanted to pick a real nice piece of river front property, you couldn't pick a more beautiful place.

Yea they have been changing over to black and whites for about 2 months now .They also are runnig tahoes with no upper warning lights and chevy trucks that look like a TXDPS l&w unit .But the reason why they are doing that i have no ideal
"Mayson, John" wrote:I saw a WCSO cruiser today. At first I thought it was DPS or Cedar Park.
It was black and white, but said "Williamson County Sheriff" in the same
style Round Rock PD uses. Looked like a brand new Crown Vic.

Personally I liked the white cruisers. But then again I like white. White
cars, shirts, walls, nice men in white outfits chasing me with white nets.
;-)

Thanks Jose for the hotel frequencies. I'm not sure why by I've always had a fascination with large hotel's, mall's, office building's, airport's, amusement park's etc transmissions and the "goings on" in such large facilities. Many times it's like a whole other city with the vast numbers of people frequenting them.

I was thinking at first that maybe they did it to distinguish the Wilco S.O. from Travis County and APD, but then the new vehicles are just as hard to distinguish from Cedar Park & DPS.

My speculation as to why the vehicles are changing colors -- and this is only a speculation -- is that perhaps Sheriff Maspero (being a former FBI agent) wants the S.O. to take on a more professional image; a respectable law enforcement organization, as opposed to some podunk county sheriff. His desire for professionalism was obvious to me when he booted the two racist deputies last year, even in the face of controversy. And now, it's even spread to new uniforms for the deputies and new paint on the cruisers.

I saw a white one zoom by our firehouse this evening, so I know they're not all retired yet.

I would think they auction them. By the way, Just don't try to pull people over or get caught with a Crown Vic full of police equipment, or they might think you're one of those impersonators. :)

I'd like to have one too. Old cruisers still have heavy duty everything and plenty of power. And it would certainly be much safer that my Suzuki Samurai!

1191. Trip to San Antonio

Yahoo group: CenTexComm
Date: 2002-07-31 20:55:10 UTC
From: Frank Jacks, Jr
Topic: 1191 Message: 1191

I'll be taking a trip to San Antonio soon from Austin. I have the LCRA frequencies for both Hays and Comal Counties.
But, I have a few questions:
Does Comal County still broadcast on 156.000 and 155.595? If so, which one of these would be the main dispatch?
I have 04-151 and 04-152 as the talk groups for the New Braunfels police. Which one is the main dispatch?
And finally, which cities between New Braunfels and San Antonio actually have authority on I-35, and does anyone have their PD dispatch frequencies?
Thanks,
Frank
NW Austin

From: Lindsay C. Blanton
Topic: 1191 Message: 1192

Frank,

Comal County maintains 156.000 for North Dispatch and 155.595 for South Dispatch.

New Braunfels on the LCRA system uses 04-151 for primary pd dispatch.

From New Braunfles to the City, Comal County SO, Live Oak (PD Disp on 154.890), Bexar County SO, and then the city.

Thanks Lindsay!
(Incidentally, a big thank you for all of the work and effort you put into the trunkedradio.net site and your own Dallas and San Antonio sites!!!)
Looking at a map of Comal county, would the interstate basically be in the south dispatch area?
And lastly, does Cibolo and Selma patrol the interstate too - and if so, what frequencies do they use?
Thanks,
Frank

Sorry, I can't comment on Fiesta but there was no problem at Sea World in SA with a scanner this year but I didn't flaunt it either.
I would suspect no problem with a scanner at Fiesta but know whos? We need to hear from someone with first hand experience who's been there this year and none of this "hear say" or "she said, he said" stuff. When I used to take a scanner into parks like that I would have my wife put it in her purse instead of wearing it clipped to me. You might could pass it off as an FRS radio as I'm sure they see lots of these with folks coming thru the gates. Or maybe as a biz band radio and state that you're on call and have to have it with you. (Of course you shouldn't lie now ;-)).

One thing to try is to go in without the radio first to "see" how thorough or tough they are and then if you think there's no problem in bringing it in then go back out and get it and re-enter.
I've also noticed that sometimes the guards get more relaxed toward the 2nd half of the day when hardly anyone new is walking in thru the gates.
sly

YES Sly , I was told July 4th this year no scanners in the
park. Then some gaurd said its only a walkie talkie, I kept quiet and went
in. They also checked all purses and bags even my kids. It could be because
it was July 4th,even more reason for me to want to keep my scanner with me.
If they give me static next time I might show my ham ticket. Or say come on
kids were going to Sea world ha. On a side note a security gaurd
ran over a child out there last night, and S.A.P.D was doing an
investigation.

Sounds like its just the Six Flaggs theme parks that are paranoid. I don't think there's any Six Flaggs parks in Florida.
I guess they think their signal does not travel outside the confides of the entry gate. Anyone could easily listen down the road or in the parking area. Yes I know they search bags but they tend less likely to say something about it in a womans bag than having it clipped to my belt or in my hand is what I was refering to. As for showing your ham ticket, it might work but do you really think they know what they're looking at? I'm sure most of them would be clueles. As far as they know (sadly) its something you created on your computer.
I now remember this was discussed a while back and someone said they weren't even allowing FRS radios in (but that's hearsay). But I guess Cell phones are ok?? I guess the bad guys aren't smart enough to call each other on the phone while in the park to plan their evil deed.

I guess it also depends on the individual guard too. if you get snagged by one and refused to enter with it, maybe try again in an hour or two and go thru a different line.

YES Sly , I was told July 4th this year no scanners in the park. Then some gaurd said its only a walkie talkie, I kept quiet and went in. They also checked all purses and bags even my kids. It could be because it was July 4th,even more reason for me to want to keep my scanner with me. If they give me static next time I might show my ham ticket. Or say come on kids were going to Sea world ha. On a side note a security gaurd ran over a child out there last night, and S.A.P.D was doing an investigation.

I thought this might be interesting for those of us who were involved in the discussion about Williamson County Sherrif vehicles:

http://www.jvfd.org/specialty_pages/july4th2002/parade.html

These are photos from the July 4th parade in Anderson Mill. You can see the newest pride & joy of the Jollyville Fire Dept. (1952 Seagrave fire engine), as well as an example of the new WilCo Tahoe, among other things.

1221. Scanners at Fiesta Texas, San Antonio

Yahoo group: CenTexComm
Date: 2002-08-10 01:07:15 UTC
From: Frank E Jacks, Jr
Topic: 1221 Message: 1221

Well, we finally have a difinitive answer to the question of taking a scanner into Fiesta Texas theme park in San Antonio.
Yes, it can be done. I went down yesterday afternoon after work (I met my wife and our kids along with my sister and her family). I arrived shortly after 6pm and entered the park with my Pro-93 and an FRS radio without questions on either one (my wife and sister had entered the park shortly after 10am with FRS radios and had no problem either). I have one of the Radio Shack "Communication" fanny packs. I had my keys, wallet, and FRS radio inside two of the zippered pockets; and my scanner was clearly visible in the front "cel phone" open top pouch. The guard hardly looked at the scanner as far as I could tell, and simply felt the radio, keys, etc in the pack. The amazing thing to me was not so much that he didn't seem to care about the scanner, as much as the fact that he didn't even ask me to un-zip and open the pockets.
Now, it was 6:00pm in the evening, and maybe he was just tired of working and checking people. And maybe another guard would have given me a more questioning look. But it was certainly easy for me to get in - and much easier than the security I encountered last Christmas at DisneyWorld.

From: Frank E Jacks, Jr
Topic: 1223 Message: 1223

Well, it wasn't that much, but they were certainly more currious about our belongings at DisneyWorld at Christmas than they were Thursday night at Fiesta Texas.
Everyone had to completely open all carry-in items and show all pouches and pockets down to the bottom.
There was no questioning about our FRS radios - I didn't take my scanner in so I can't comment on that.
Remember that that was only 3 months after 9/11 (and just after the guy with the shoe bomb) so they were probably much more paranoid.

1224. Cedar Park PD on Wm County, APD digital radios and

Yahoo group: CenTexComm
Date: 2002-08-11 06:07:27 UTC
From: Robert Barker
Topic: 1224 Message: 1224

I finally got to hear Cedar Parks Talkgroups on the Williamson County system. So what is the Cedar Park System being used for? Perhaps they will just use this as a "west" tower in case it's needed later. It is pretty consistent that all the previous Cedar Park traffic is now being broadcast over the Williamson County system.

I'm getting a few reports regarding APD's new digital system. My dispatcher friend said that they will be moving to the new Dispatch Center off 51st in October of next year. Meanwhile another friend who talked to a Walking beat officer the other night said they have and are using digital radios for little tactical operations like "drug buys" and prostitution stings. The comment was that he doesn't even try to listen to the radio because the voices are very distorted (digital) and very hard to understand. His comments were that the radios are not working well at all. This month's issue of "The Shield", APD's newsletter states that
The new system will consist of 2 main sites 1) 4 points (I assume this is 222 and 620) and 2) Decker Lake (power plant by the Expo Center)..
Additional sites (possibly receiver sites) being set up at Martin Hill (big round UFO looking building off FM 1325 @ Wells Branch), Lime Creek (off Fm 1431 by Cedar Park and poss same site as LCRA Lago Vista tower), UT RLM (UT Robert Lee Moore 26th and Dean Keaton), Collier (I have no idea where this is.. any guesses?), and Honey Comb (also have no idea where this is)

There was an earlier comment about EMS using new yellow District Command vehicles.. A picture of that vehicle is at the photos part of this site.

From: Chris Howell
Topic: 1225 Message: 1225

all dc's have the new command vehicle except dc2.

i finally found out what demand 3 and 4 are. those are academy units that are manned from 8a to 5p on select days to give the cadets some street time during the academy.

demand 2 is off-line due to budget, but that doesn't mean that you'll never hear it again.

rescue 17 is in thier quarters at deep eddy and medic 3 is at brack (well, the unit is stationed there, we're never home!)

1228. AIRONE and the New Austin Digital Radio System

Yahoo group: CenTexComm
Date: 2002-08-15 04:10:49 UTC
From: Robert Barker
Topic: 1228 Message: 1228

Yep.. they are supposed to be pulling over aggressive drivers but all they have been doing it targeting speeders.. Well speeders are kinda aggressive but I think it's just an easy way to make a traffic stop. SO Far, I don't know of any other Texas City that uses a $1.7 million Helicopter to catch speeders, and frankly I'm a little disappointed that they aren't using their "air time" more at night when the real crime is happening.

Details on the new Austin Trunked System can be found at:
http://www.trunkedradio.net/modules.php?name=TRSDB&sid=2

And the frequencies they will be using:

Licensee Name Callsign / File Num Status Service
TRAVIS, COUNTY OF WPQY686 Active YF
AUSTIN, CITY OF WPQY813 Active YF

And the scanners that will monitor it:
http://www.grove-ent.com/apco25.html

The Switch date over to digital is supposed to occur around October 2003, and will also involved the move of the communications over to the new building off 51st. However that date could change anytime. I don't anticipate it being any sooner but perhaps much later. For awhile there, Motorola was talking about filing bankruptcy so it that happens, it could change everything.

From: res0b64t
Topic: 1232 Message: 1232

FWIW-
Here's a list of frs, gmrs and dot freqs I've compiled. These are mainly the freqs you'll find pre preprogrammed in those little walkie talkies you can buy just about anywhere now. All of them are short range, couple miles (well except for some of the gmrs stuff). You'll hear kids, families, and etc while at public gathering places as well as apt complex workers, store/restaurant personel, surveyors and so forth. Plug them in and give a listen in your neighborhood.
Enjoy, Sly

Topic: 1234 Message: 1234

Has anybody use any of the Motorola GTX's (handheld or mobile) as dedicated trunked system monitors?

I'm kind of surpised by how inexpensive they are, especially in relation to other Motorola hardware....

1236. The Austin/Cedar Park Pursit and Corpus Christi

Yahoo group: CenTexComm
Date: 2002-08-25 05:38:32 UTC
From: Robert Barker
Topic: 1236 Message: 1236

My friend in Corpus Christi is trying to make sense of the Trunked system there.. He has a radio shack Pro-93 and has it programmed for EDACs but is getting talkgroups on 00-001, 00-002, 00-003 and 00-004 and they are not listed on the list. He said neither the FIRE or EMS dispatch talkgropus tones anyone out. or does he just not have the right talkgroups??
Also on this Radio Shack scanner, can any takgroups be a priority.

Also does anyone have any more information on the Robbery in Cedar Park that resulted in a pursuit and the lady shooting herself? What got robbed? Was this female the one who robbed the store or was she working alone? How did APD get word of Cedar Park's Robbery? Was there a bolo and APD spotted the vehicle? or did Cedar Park initiate the case into Austin and APD just saw it happen.

I happened to be a few blocks away from the Body in the creek call earlier today, so I went by there to see what apparatus showed up and saw a truck I have never seen before. This was a WHITE search and rescue truck that said Austin Fire Dept 1 on it so I assume it's SAR1. I took a picture of it and will try to get it uploaded as soon as I get the film developed. Also they used a "big wheel" to get the patient out of the creek. I had no idea about the big wheel until I saw it or who is the keeper of the big wheel. This is a big thick wheel like from a wheelbarrow that I guess assists them in carry fat people out of a creek bed. Can anyone elaborate on the big wheel?

I dont think they have it yet but I remember reading an article about the Heavy Rescue unit austin is getting and how there was a controversey because it was to be staffed both with AFD and AEMS people and they were worried noone would be in charge.

I think what i read was that it was not an AFD vehicle or EMS but rather somehow operated throuh the TC OEM and they were going to damn well do as they pleased (FD+EMS).

I saw a dumbass do something stupid and get hurt in a state park in california a few weeks back and the park rangers and AMR paramedics used some contraption to help get him out. It was like a backboard with a giant wheel attatched to the bottom. I assume it is a lot easier to move for a long distance (they don't have to carry all the weight) and easier to manuever then something with 2, 3, or 4 wheels through rough terrain. Was that what you saw?

Yes it was a big wheel and I assume they mount the stokes basket on it. . looked really silly but I guess it's better than carrying a fat guy out of the creek. I know they used to try to use STARflight to try to lift patients out of tight spots but I don't think it has ever worked. that's all just TV Stuff. One time STARflight though they could drop paramedics into a creek area and have them try to search for a patient. that also never worked. I watched one time when the were out by the Loop 360 bridge looking for a patient who was supposed to be on the edge of a cliff somewhere.. Someone must have seen on TV that they could put a rescue guy on the end up a rope dangling like 50 feet below STARflight and he was supposed to be able help to locate a patient.. I think they were unable to communicate by radio due to the helicopter noise and they just abandoned that. That is also about the time that AFD began to loose confidence in EMS as a rescue crew. then again during water rescues they tried to do the STARflight thing again with a rope and seemed like hours trying to pull people off cars.. and AFD just extended a ladder out to the car and took over and got the patients out. That was some of the Chaos that I have monitored in the past. I think both groups have some good resources.. EMS has a rubber inflatable boat that they showed off at the new station off FM 2222 And FM 620 but I don't recall that it has ever been used on an actual call. But most of the attempts to use STARflight in any rescue involving ropes has pretty much not worked. Also when they first got the helicopter they said they could have rescue swimmers deploy directly from the helicopter into the water and I saw it as a demo only but never heard they actually did it for a real rescue.

The white AFD truck I saw today was the same size at the EMS commanders Vehicle but was easy to distinguish because it has a bicycle on the back, and we are talking about standing up on top of the back of the truck. I thought that the vehicle that EMS and FIRE were fighting about staffing was a big huge heavy duty rescue unit, but I'm not sure.

Robert,
I have a Pro-93 scanner and will try to help out.
The easiest answer is to the last question...no, unfortunately, talkgroups do not have a priority. Only an individual channel in the scanner can have the priority feature attached to it. A work around for this would be to program the system into two banks with one of the banks having all of the talkgroups and the other bank with only the single talkgroup he wants as a priority. This of course requires him to have extra banks not being used.
As for the other issues, has he put the frequencies in LCN order, and has he left the 00 channel in the bank empty, and started with the 01 channel in the bank as the 01 LCN channel, etc?
Has he programmed in all of the talkgroups he wants to listen to, and has he put the bank in closed mode? Also, has he actually set up the bank as an EDACS bank (as opposed to an FM, AM, or MOT bank)?
Those would be the first things I would be looking at as to problem areas. Let me know what else he can tell you and I'll try to provide further information.
Frank
NW Austin

Ok, the little truck that AFD was using was SAR 1. It's part of AFD's special operations team, which I'll try to explain.

Station 1 - Dive Rescue and Technical Rescue (high angle and cliff rescue)
Engine 1
Engine 50
Ladder 1
Dive 1 and Boat 1 (staffed by crews from E1, E50, or L1)
SAR 1 (staffed by crews from E1, E50, or L1)

Station 14 - HAZMAT
Engine 14
Rescue 14

Station 20 - HAZMAT
Engine 20
Rescue 20

Station 21 - HAZMAT
Engine 21
Rescue 21

The battalion chief for AFD's special operations battalion is Battalion 6.

The Heavy Rescue truck is not yet in service. I'm unsure of an in-service date for that.

what your talking about is a "short-haul", where the helo hovers above someone and a rescue medic drops out of the helo, attaches to another person and both ascent tot he helo. it works and has been done by starflight. also, starflight does drop rescue medics out of the helo over the water, they have done that this year on lake travis. and, i have been on calls where rescue 16 utilized thier rubber boat.

the white truck is tech rescue 1, station out of central station (5th/trinity). the heavy rescue is still not in town as yet and ems hasn't and won't fight about staffing. the official and unofficial line for ems has always been for us to do what is in the best interest of the citizens (what a concept!)

From what I read, it wasn't EMS complaining about the staffing but rather AFD.

1244. APD get Bikes for Adam Sector

Yahoo group: CenTexComm
Date: 2002-08-28 15:05:12 UTC
From: Robert Barker
Topic: 1244 Message: 1244

If they do not increase the number of officers, I don't know how they plan to use these 6 new bikes in Adam Sector to help out with the drug problem. The map on page B3 shows the problem area to be Rutland from Metric to Lamar.
Community pitches in to buy bikes for Austin police patrol
By Tony Plohetski

AMERICAN-STATESMAN STAFF

Wednesday, August 28, 2002

The question first came up during a recent neighborhood meeting: How could residents along Rutland Drive better prevent crime?

They delivered their answer Tuesday, giving Austin police six mountain bikes to help create a bicycle patrol along the North Austin street.

Residents and officials with St. David's Root Cause Project, an organization that deals with major community health issues, presented the ribbon-studded bikes to officers in the northwest area command outside the nonprofit agency's headquarters.

Sher Pyle, who has lived along Rutland for 20 years, said she and several others quickly mobilized to get donations from other residents and businesses after the bike patrol idea came up.

"Whether we are homeowners, businesses or police, we must do what we can to make our little piece of the world safer," Pyle said.

Officers read- ily accepted the bikes, valued at about $1,800 each.

Assistant Police Chief Rick Coy said bike patrols have been successful at fighting crime in other Austin neighborhoods, including down- town.

He said officers patrolling parks, apartment complexes and strip malls, for example, can quietly slip up on crimes in progress to arrest suspects.

"The Police Department is committed to keeping this a safe place to be," Coy said.

No officers will be added, but those already assigned to Rutland will use the bikes to patrol the area.

1245. Temple to Scott and White back to Williamson county

Yahoo group: CenTexComm
Date: 2002-08-31 01:17:27 UTC
From: Robert Barker
Topic: 1245 Message: 1245

I'm hearing that Scott & White is talking to their medical helicopter now on 866.0125 which is NSPAC Ch 1 (of 5) intersystem channels.. I think this is from Williamson county's system.

I need to know if they are on that all the time or on the 462.95 I have heard them on 467.950 which is the input.. talking to a repeater that I assume is in Temple.

Perhaps while in Temple they are on 462.950 and then if they run a call in Williamson County they switch over to NSPAC Ch #1 866.0125... If you can monitor that or the input 821.0125 Let me know what you are hearing.

From: Randell Pitts
Topic: 1251 Message: 1251

I can answer this one...

S&W STAT is using NSPAC 1 while working with
Williamson County EMS- this channel is labeled/called
"CALL-1" there and provides them with a mechanism to
communicate via 800mHz & patch. In the future there
are plans to have dedicated Heli channels in
Williamson County for this use.

STAT uses their EDACS system from Bell County, hence
why they're using NSPAC 1; STAT still uses UHF for
their primary communication with the communications
base in Temple.

Hope this helps.

I hear a demand 64 being dispatched to regular calls? I thought that id was usually reserved for ems units at events (erwin center etc)

Also, I hear them assigning EMS units to EMS Channel 2. Is this just new procedure or is there a specific reason for it?

From: Chris Howell
Topic: 1262 Message: 1264

demand 63 and demand 64 are academy units. they are staffed with academy staff and cadets in the academy. it gives the cadets a chance to see what they are learning applied on the streets. the units are not online every day, just when the academy staff feels that the cadets would benefit from being on them.

there is no designator for academy units, so they use the standby unit logons for cad/mdt purposes. also, calling them demand xx seperates them from a standby unit. standby units are not usually assigned "system" calls.

ch 2 is not yet used for dispatch on a regular basis. it might, however, be used for a scene channel, usually when they are responding with county units. ems has a vhf radio in each unit but no handhelds for county use. so the crews are onscene with only uhf on thier radios. so, all all ems units on scene will go to other uhf ems channels. on that note, ems channel 3 was removed (not used enough or something like that)

1265. Friday night before the Storm

Yahoo group: CenTexComm
Date: 2002-09-07 03:21:20 UTC
From: Robert Barker
Topic: 1265 Message: 1265

The LCRA system goes all the way to the Bay so expect to hear some new and different talkgroups from that system. It's a good time to listen. http://www.trunkedradio.net/modules.php?name=TRSDB&sid=48

I'm listening to the LCRA rangers right now on I-call and they are talking about the storm. saying the lakes are already FULL and if we get that much rain... 5 of 8 models show heavy rain coming this way. That we will flood bad.. very bad.. why they will not open flood gates now is beyond me knowing that they are gonna get rain. So far news is saying the Storm isn't moving at all which is not good.

The City of Austin is planning some sort of parade for 9/11 but I don't know much more than it's supposed to be in the afternoon. Cap Metro is running detours after 3pm. APD is planning on having everyone work that day "just in case"

Has anyone else noticed all the radar Speed Devices along I-35 and Mopac.. They transmit on K-band.. On Mopac they are North and South at about Braker Ln and then about just north of the Barton Creek Mall Exit..

On I-35 They are north and South @ Rundberg and then around Ben White again. They have an APD Badge on the back and say something like donated by Capital Metro.. I assume they will eventually be moved all over where they are having speed problems. I have seen a similar trailer used by Street/Bridge but these say APD on them. They have a speed limit sign and then have a radar telling you "your speed" nice but make your detector go off.

They put those radars up where they think there is a high volume of speeders and having them on a k-band makes pepole with detectors think there's a cop up front to try to slow them down so wich means in about a week pepole are going to think that it's just the speed detector when they come up to it they find out its a traffic unit shotting radar.On the back of the speed detectors some of them say donated by cap.metro

From: memo124
Topic: 1268 Message: 1268

Its that time again. Last week I went to cover high school football at Hyde Stadium. Burnet vs. Austin Reagan. Not a bad game. I was only able to do a quick search for about 30 minutes. I only found AISD PD on 460.875.

This week I went to Lake Travis High School vs. Lampasas. Again I was able to search for 30 minutes. I found:
461.750 for parking control.
464.550 for field operations.
154.600 could be anyone.
451- 452.000 found two frequencies for coach's headsets.

I will keep you posted next week.

A couple of LCRA questions:
What are "Rangers?"
I know that there is a tower on Dobie Mall, one in Lago Vista, and one in Seward Junction. Where are the other Austin towers located. I live in Anderson Mill (620 and 183), and have been trying to listen to the Lago Vista tower. But I'm wondering if another tower would provide me better reception.
Thanks,
Frank

1270. LCRA Rangers and their Radio System

Yahoo group: CenTexComm
Date: 2002-09-07 14:37:03 UTC
From: Robert Barker
Topic: 1270 Message: 1270

The LCRA Rangers are Certified Texas Peace (Police) Officers that provide security and Law Enforcement duties at all LCRA properties and facilities. This includes the dams, and most all of the Colorado River. They have boats and patrol Lake Travis along with TCSO, and Parks and Wildlife. They drive SUV's and since they are law enforcement, they can do traffic stops and assist other agencies. Rangers are also trained in Swiftwater rescue and are Paramedics.
http://www.lcra.org/rangers/

What is fantastic about the whole LCRA radio system is that they wanted the ability to communicate with their rangers and dams all along the Colorado River from Llano down to Matagorda on the coast. So they created this Smartzone system of 900 Mhz towers. To help pay for the system, they got local police and fire depts, and other agencies to join onto the system to help share the cost. Since it is Smartzone, you may or may not hear another area depending if there is a radio that is tuned to the talkgroup you are wanting to hear. For instance, I'm in North Austin and last night I was hearing SWSTU PD from San Marcos off the Austin North Tower.. This means that there was a radio tuned to this tower that was scanning that talkgroup. I frequently hear Fredericksburg, San Marcos and Boerne transmissions off the North Austin Tower.

As for the Austin Area there is a tower off I35 @ Westinghouse Rd near Georgetown called Austin North,
Lago Vista Tower is located off FM 1431 by Trails End Rd.
Seward Junction Tower near the intersection of 183 N and Hwy 29 north of Leander
Dobie Tower located on Dobie Mall at MLK and Guadalupe
Supposedly a Site on Buchman Mountain which is in Westlake Hills near all the other transmitters *
(we have not been able to identify the Buckman Mtn site yet and get the frequencies)
Creedmoore Site is located just Southwest of ABIA airport
Bastrop site somewhere near Bastrop
Elgin Site I think is north of Elgin off Hwy 29
Blanco North Site is really south of Hwy 71 at the Colorado River as it goes into into Burnet Co.
San Marcos site, I'm not sure where it is but I think it's closer to Wimberly

see: http://www.trunkedradio.net/modules.php?name=TRSDB&sid=48

According to their literature we these agencies are on the sytem but we need to get their talkgroups if anyone can help out:

Fair Oaks Ranch (police),
San Marcos Electric,
Bluebonnet Electric Co-op,
University of Texas, M.D. Anderson Research (police),
Colorado Valley Transit,
Kimble County (sheriff)
Schulenburg Police Department

There was talk of Austin joining the system and they choose not too. As more agencies join the system, expect to hear more traffic and there may also be more DPS units with radios on these channels too. They are NOT talking to DPS dispatchers on it but they may talk car to car with other agencies and troopers like they do in Williamson County.

1271. 9/11 Parade - Two ladder companies will make an arch on Congress Ave

Yahoo group: CenTexComm
Date: 2002-09-10 11:26:59 UTC
From: Robert Barker
Topic: 1271 Message: 1271

Memorial Parade
TCSLEA and AAPFF
Congress Avenue Bridge to Texas State Capitol
7:30 p.m.

Two ladder companies of the Austin Fire Department will extend their ladders to form an arch in the middle of Congress Avenue. The procession will be lead by color guards, the firefighter bagpipe corps, elected officials, VIPs and event sponsors.
Every law enforcement agency, fire department and Emergency Medical Service units in the state of Texas will be invited to send representatives to Austin to participate in the evening parade.
A long line of emergency response vehicles will silently roll up Congress Avenue with their lights turned on. Downtown Austin will be flooded with a bright glow of red, blue and amber lights. As the procession reaches the State Capitol grounds, the emergency units will stop at the front gates of the State Capitol.

see: http://www.911usa.org/911_itinerary.doc
for the complete schedue

9/11 USA PROJECT
Unity * Strength * Allegiance

On September 11, 2002, the Travis County Sheriffs' Law Enforcement Association (TCSLEA) will coordinate a series of memorial events to commemorate last year's horrific tragedy. The Austin Association of Professional Firefighters (AAPFF) will be working with TCSLEA to provide our community with a day of remembrance.
The 9/11 USA Project will recognize the men and women of law enforcement, firefighters, Emergency Medical Services and other emergency personnel who serve our community. TCSLEA and AAPFF will host New York firefighters and police officers that were at the World Trade Center on September 11, 2001. These firefighters and police officers will be in Austin several days before the events and available to the media for interviews and the school district for special appearances and speeches.
Other agencies, organizations, and businesses currently involved with this growing project are:

City of Austin
United States Army
Fraternal Order of Police
Austin Police Association
Texas Department of Public Safety / Capitol Police 155.445 460.075
Austin/Travis County EMS Employee's Association
Texas National Guard 149.625

Austin Convention and Visitors Bureau
Hill Partners Management Company, Inc.
Holiday Inn - Town Lake
Harvard Technologies
JRG Communications, Inc.

The following is the itinerary of the day's events. Each of the planned events is open to the public and is projected to draw significant crowds.

September 11, 2002

Firefighters Memorial Service
Austin Association of Professional Firefighters
Old Fire Training Tower - North Shore of Town Lake
7:30 to 8:30 a.m.

The memorial service will include bagpipes, a City of Austin Proclamation and the ringing of a fire bell followed by a moment of silence at 7:46 a.m. (the time the first plane hit the World Trade Center). The names of fallen local firefighters will be read aloud. Elected officials, representatives of the Travis County Sheriff's Law Enforcement Association, the Austin Police Association and other law enforcement agencies will be present at this opening ceremony.

Public Memorial Service
Travis County Sheriffs' Law Enforcement Association
Texas State Capitol
Police Memorial
11:00 a.m. to 1:00 p.m.

Plans for this activity include a Military Color Guard, a rifle company, an elementary school choir, a bagpipe corps of firefighters, state elected officials and a fly-by of military aircraft in the missing man formation. This ceremony is projected to have hundreds of attendees. Staging and a sound system will be utilized to accommodate the expected crowd.

Candlelight Vigil
Texas State Capitol - South steps
8:30 to 10:00 p.m.

The Travis County Sheriffs' Law Enforcement Association members, standing shoulder to shoulder with the Austin Association of Professional Firefighters, will hold a candlelight vigil on the South steps of the Texas State Capitol.
The public will be invited to join police officers and firefighters from all over Texas for the candlelight vigil. Representatives of TCSLEA and AAPFF will make brief closing remarks. The memorial activities of September 11, 2002 will end with the playing of Taps.

All of the events are open to the public free of charge.

The latest news is that the Austin, Tx system will possibly be 6.0 or newer technology and we have been told that the newer Uniden Trunktracker that will be released will NOT be able to decode this technology. We will just have to wait and see what happens. They may go on line with this system and go back to Analog in a short time. If you haven't already and want to be in on the discussion of the Austin system, check in @

From: Robert Barker
Topic: 1279 Message: 1279

The other day when I was getting my mail, I noticed the streetlight near my mailbox cluster had a big box mounted on the top of the mast, it has two stubby looking antennas mounted under the box facing upside down and a thick wire going to top of the light and appears to be wired into a dusk/dawn sensor(?)

So I saw that and then the next day, when I pulled into the neighborhood next to mine on Lamplight at Parmer Ln, the first streetlight inside the neighborhood has the same looking box on top but this box has two very distinct looking 800 Mhz antennas (curly que, pigtail type) mounted upside down and one mounted on the top of the box and no wire going to any sensor. I have no idea what this is unless it's a wireless device to turn all the other streetlights on which seems like a waste of money.

Does anyone have any ideas what this is.

1284. Austin City Limits Music Festival

Yahoo group: CenTexComm
Date: 2002-09-29 02:57:18 UTC
From: Robert Barker
Topic: 1284 Message: 1284

Austin City Limits Music Festival Frequencies heard today:

461.3125
461.3375 very active involving moving artists to stages
461.3875 not sure if this was active or used nearby
461.4375
464.500
464.550
465.6875 2nd most active channel
466.0875 Security and Medical Control Ch 4?
467.2125
469.500
469.550 Police Ch 5?
453.325 Parks 1 can hear park police and parks all over Austin
460.500 APD ch 8 was being used some but just tonight Parks Police seems to have switched to
460.025 APD Ch 7 they are using tonight
of course the media freqs are active and especially News 8 on 859.8125

I got close enough to see a label on a handy talkie. there are 18 channels. every stage has their own channel. the first few are for main event staff, operations, trash, etc..

The APD Helicopter pilots seem bored. I too have witnessed them flying in circles.. I guess he was backing the officer up on his traffic stop.

It seems there are times they need to fly and they don't and other times when they do fly and they don't need to be. I don't know in other cities if they fly all the time but I do know many are on Standby ready to go anytime. I'd like to see them right at 5pm being a spotter for accidents and high traffic delays rather than just see them go in circles all the time. I live my the North Sub and they are always flying over there.

Still keeping a listen on the new 800 Mhz frequencies.

Subject: Operational: Emergency Drill on Campus

-----BEGIN PGP SIGNED MESSAGE-----

On October 17, 2002, The University of Texas at Austin will host a drill for city, county, and state emergency responders from 1:00 p.m. to 4:00 p.m. The drill will not interrupt classes or any other routine campus operations. At most, some pedestrian and vehicular traffic will be re-routed for a three or four hour period.

The exercise is likely to create media and public attention due to its size and scope. For this reason we are requesting that you forward this email to family and friends for their notification.

The University has agreed to be the site for this drill because we believe we can benefit from the experience. In preparing for the drill, we have become more aware of what is necessary to deal with any crisis that might arise on campus. Some of the University?s processes that will be tested include:
? Convening the Core Crisis Management Team.
? Testing emergency communications (e.g., fire warden telephone tree, all campus voice mail, pager systems, group email, web updates, campus dorm television).
? Responding with emergency personnel from UTPD, Environmental Health and Safety, Parking and Transportation Services, and Physical Plant.
In addition, the University benefits from the relationships our staff has built with the various city, county, and state emergency responders.

As stated before, this drill should not interrupt campus operations. Nothing is expected of faculty, staff, or students during the drill other than your patience and awareness. During the drill you may see emergency response vehicles and actors that appear to be injured. Because drill coordinators are trying to create a sense of realism, some individuals may find themselves emotionally affected by the scene. The Counseling and Mental Health Center (471-3515) is available to students who feel the need for consultation. In addition, students may access a counselor 24-hours a day by calling
471-2255.

More information about the drill can be found at
http://www.utexas.edu/vp/ecs/drill.

1291. Austin's New Digital System

Yahoo group: CenTexComm
Date: 2002-10-17 13:04:12 UTC
From: Frank Jacks, Jr
Topic: 1291 Message: 1291

Not being very familiar with digital systems, I didn't realize this was possible: According to stuff I've read (http://www.motorola.com/mediacenter/news/detail/0,1958,1568_1214_23,00.html) Springfield MO's new radio system is an APCO-25 system that can broadcast in either digital or analog. Apparently most of what they are using will be analog (http://drsm0ke.net/scanner/Spfld_grn_co_mo.htm). Is this possible on the new system that Austin is getting? And if it is, what is the possibility that they will broadcast in mostly an analog mode (allowing the public to still listen)?

From: Lindsay C. Blanton
Topic: 1291 Message: 1292

The Austin system is broadcasting a Project-25 control channel, or what Motorola trademarks as an "ASTRO-25" control channel. This means there will be NO analog transmissions on this system. None. Zilch. The system will not support analog transmissions.

Motorola's other APCO-25 compliant system offering transmits the older regular Smartnet control channel, but allows APCO-25 digital and analog transmissions.

This detective is misinformed.

Unless APD uses encrypted ASTRO, The Austin system will be trackable by the new Trunktracker scanner. You might read these comments on trunkedradio.net which discuss this exact "rumor" that seems to be floating about:

From: Frank Jacks, Jr
Topic: 1291 Message: 1294

Lindsey,
I'm not disputing what you're saying, just asking for clarification...The press release (http://www.motorola.com/LMPS/pressreleases/page1418.htm) from Feb 2001 says, "...The first communications system in the state capable of operating in both digital and analog modes, this system will be used by public safety and public service agencies in Austin and surrounding Travis County including police, fire..." It later says, "...ASTRO XTS 3000TM digital portable radios and ASTRO Spectra? mobile radios and MTS 2000TM analog portables and MCS 2000? analog mobiles will be part of the system..."
Have they changed the system, or are they now doing something different with the technology, or was the press release just misleading and/or wrong?
You (and Robert) know a whole lot more about this than I do, so that's why I'm asking the "experts."

1295. RE: [CenTexComm] Austin's New Digital System

Yahoo group: CenTexComm
Date: 2002-10-17 21:08:13 UTC
From: Lindsay C. Blanton
Topic: 1291 Message: 1295

Frank,

The press release is somehow either a misunderstanding, a mistatement, or requirements have changed. It is possible that the original intentions of Motorola and the system designers was to deploy the mixed-mode configuration that utilizies the regular Smartnet Control channel, which would allow analog and digital operation on the same system, but, the system is currently broadcasting the 9600 baud Project 25 control channel.

Because the system is using the Project-25 control channel, which is not Motorola's proprietary but rather a standards developed control channel, the system does not have any provisions to operate in analog mode. Motorola Project-25 Trunking subscriber units cannot be programmed to work in analog mode on a Project-25 system.

Now, they might be able to go to a conventional channel or simplex mode for analog operation, but the current system implementation will not allow analog operation.

Remember, there is a difference between a "Project 25 Trunking" system, and an APCO-25 capable system.

Thanks Lindsey!
Unfortunately, your answer wasn't what I was hoping to hear.
Like John, I live in Williamson County - however, my area will be anexed into the city within the next few years, and the city will then be my chief scanning desire. Hopefully the price on the decoding scanners will have come down significantly by then.
Frank

1297. No 9600 from Uniden

Yahoo group: CenTexComm
Date: 2002-10-18 18:03:15 UTC
From: Robert Barker
Topic: 1297 Message: 1297

According to http://strongsignals.net

The new Uniden Scanners WILL NOT decode 9600 baud systems.

http://www.strongsignals.net/access/news/news.cgi?type=single§ion=radio&entry=814

The new Uniden digital scanners will monitor three of the four types of APCO Project 25 systems. They are:
a.. Conventional P-25
b.. Trunked at 3600 baud
c.. Mixed Mode at 3600 baud
The APCO P-25 trunked system at 3600 baud is the most common P-25 system in operation today.
The other APCO P-25 trunked systems operate totally digital at 9600 baud. The ability to monitor these pure digital systems is still in development. There are a few agencies that use this total digital system and include the states of Michigan, Colorado, Minnesota and the city of Austin, Texas.

The BC250D and BC785D are just the first in a family of Bearcat digital capable scanners to be produced by Uniden. As we continue to grow the family in this series, so will their coverages of various other digital signal systems.

Thanks for passing along the news, Alex!

No sooner do I speak, than another rumor has surfaced indicating that the new scanner won't work on ANY project 25 systems using the 9600 baud control channel.

It doesn't look good.

My previous statements and observations were made after hearing directly from Uniden Reps, but now Uniden is saying otherwise on 9600 baud systems.

We are working the discussion in regards to this at:

http://www.trunkedradio.net/groups/showthread.php?threadid=1932

If this is true, I stand corrected in my previous statements.

NO, you can't scan digital channels in an analog mode.. they are digital through and through and the only thing that would have let you decode them would have been the control channel.. but if the system is 9600 baud..then you can't trunktrack (according to the latest info we got today) and you can put the scanner back into a regular scanner mode (not in trunktracking) but it will then not decode any digital

so I take it the scanner will only do digital while trunk tracking? No digital simplex or sitting manually on a channel (out of trunk mode) and monitoring comms? I just figured digital and trunking were to differently toggled settings on the scanner. Oh well it was a wishful thought...
I wonder how Austin's gonna handle npspac freqs?

1302. Re: APD chopper

Yahoo group: CenTexComm
Date: 2002-10-29 04:52:03 UTC
From: DogHostage
Topic: 1287 Message: 1302

Did anyone hear APD today tracking down a bank robber? It seems they received a lot of help from Starflight, apparently tracking the radio signal of the stolen money. I started listening when they we on 360, and they tracked the guy all the way down Ben White near I-35. I was left wondering where Air One was during this time...

1303. Bank One, the rat and the Warehouse

Yahoo group: CenTexComm
Date: 2002-10-29 14:42:50 UTC
From: Robert Barker
Topic: 1303 Message: 1303

I heard the traffic afterwards.. this would have been great monitoring I'm sure. It was the Bank One at 183 and FM 620 that got Robbed. The robber took a rat pack and STARflight was launched to track because Air 1's rat was broken. Air 1 seems to be plagued with problems .. when the guy was trapped on the side of Mt Bonnel this summer, they had to pull off the rescue because their spotlight blew a fuse. They fly around when nothing is going on and they are down for maintenance when they are needed. Starflight located the bad guy at the Warehouse on Ben White.. and he was taken into custody. Starflight proudly came up on EMS primary and said "mission accomplished". They are smiling knowing that they are able to bail out Air 1 for Law Enforcement needs in time of crisis.

Also there was some activity last night in George sector but unsure exactly what happened. Apparently the suspect tried to run over an officer and then there was a pursuit and the vehicle wrecked out and then there was a rescue alarm.

My friend called to say that Cap Metro is changing things up a bit. They seem to be moving more and more to the LCRA system and are giving the conventional 800 Mhz system back to Special Transit.
I think the line up was:
856.2125 Special Transit vans
857.2125 Special Transit cars
858.2125 Busses
859.2125 ??
860.2125 Supervisors

Everyone is gearing up for Halloween night. APD plans to have 200+ officers downtown. There is a map in today's paper showing the streets. Be familiar with the layout on 6th street because things happen very quickly. Should be an interesting night. I can't wait.

What channels does Austin EMS use for hospital reports. The last trip that I made to Austin I was not able to hear any reports on the med channels. Am i scanning the correct freq's or do they use cellphones?

Also med 9 and med 10 were very slow considering how busy they claim to be. Have they gone to a "silent dispatch" with their MDT's?

1307. Re: [CenTexComm] Austin EMS

Yahoo group: CenTexComm
Date: 2002-11-02 17:00:51 UTC
From: ExLngHrn@aol.com
Topic: 1306 Message: 1307

155.340 is the EMS to Hospital frequency. The ambulances are not on a repeater when they talk to the hospitals, so you need to be close to hear the patient reports.

462.975 is the primary dispatch channel, called channel 1. Channel 2 is 462.950 and is used mainly for non-emergency traffic.

Austin FD dispatches on their channel 7 (453.275). They coordinate with Austin EMS on 453.500, called Firecom 3. Rescue incidents are handled on 453.9, called Firecom 6.

County first responders are dispatched either on EMS County (155.715) or Firenet (153.95)

Hope this helps

I'll be taking a road trip down Hwy 183 south from Austin toward the coast this weekend.

Other than the Caldwell Co system:
http://www.trunkedradio.net/modules.php?name=TRSDB&sid=11

Are there any other frequencies I need to monitor along the way besides possibly LCRA and DPS and the standard Car to CAr stuff.

Any other new systems long this route.

1316. Pflugerville High School; APD new system activity?

Yahoo group: CenTexComm
Date: 2002-11-12 19:21:35 UTC
From: Robert Barker
Topic: 1316 Message: 1316

Does anyone have frequencies for Pflugerville High School? Either busses or those used at or around their stadium. Just curious for a friend who was asking. I didn't find anything on the FCC database.

Also is anyone out there checking on the new APD system from time to time.. checking to see how many control channels are up and buzzing and trying to nail down the active tower sites. Also has anyone heard any talking or anything that sounds like talking on the new trunked system or the 5 NSPAC channels.

I don't have anything on Pflugerville, but Conally
High uses 466.700 for campus. During football they use
462.900 for stadium ops and 467.800 for football
parking.

Also, Williamson County jail in Georgetown uses
453.2125 and 453.9375 for jail ops, inmate transfers
to courthouse, and security at the courthouse.

Topic: 1325 Message: 1325

I was in Corpus for the weekend and noted these talkgroups not listed at www.trunkedradio.net

00-001 Warrant Checks
00-003 Fire/EMS Dispatch
00-005 Swat Callup
05-121 Swat 1

Also Refugio County Fire was active on 159.195 (154.07input, 167.9tone) and was not using the 158.835, or 155.895 that they had used before

1326. Channel 36's great Story of the APD Helicopter

Yahoo group: CenTexComm
Date: 2002-11-20 14:35:35 UTC
From: Robert Barker
Topic: 1326 Message: 1326

Did anyone else catch the great story on New 36 last night of the APD Chopper?. In one of the examples they showed using it to go after teenagers throwing eggs. The question that comes up is whether it's cost effective to be using a helicopter to go after crimes like that.

They probably just happened to be in the air at the time.. but they did ask why is its not always available and they just said it needs lots of maintenance. They said it hurts the spotlight to turn it off and on all the time.

Also there was a large fire in Luling.. a tire plant.

I hope everyone has had a chance to listen to Joe Taylor, Airbone Traffic on 455.9625.. he's a hoot.. he cusses and tells jokes and everything.

TEXAS HEX RALLY CANCELED
Texas Exes officials cancel event after death of Texas A&M player

Texas A&M player dies
Freshman defensive end Brandon Fails dies after complaining of breathing problems
AMERICAN-STATESMAN STAFF

Monday, November 25, 2002

COLLEGE STATION ? Texas A&M freshman defensive end Brandon Fails died Monday morning after, a source said, he complained of breathing problems in his dormitory room in Cain Hall.

Fails, a 17-year-old all-state recruit from Colleyville near Fort Worth, had been taken this morning to St. Joseph's Hospital in Bryan. He died at 9:03 a.m.

Officials at Texas A&M scheduled a press conference for this afternoon and have not provided details about Fails' death. The death was confirmed to The Associated Press by Robin McLure, spokeswoman for the Grapevine Independent School District.

Fails' parents drove to College Station on Monday and were notified of their son's death by head coach R.C. Slocum.

He is the third Texas A&M player to die in the past 12 years. Sophomore defensive end Terry Nichols, 21, of El Paso was killed as a passenger in a two-car wreck in his hometown on May 27, 2000. Freshman walk-on placekicker James Glenn, 19, of League City died of a suspected heart condition before an Aggie practice on Kyle Field on Sept. 25, 1991.

The death comes four days before the Aggies travel to Austin for the annnual game against the Texas Longhorns.

A 6-foot-3, 307-pound star at Heritage High School in Colleyville, Fails had played four games this season, against Louisiana-Lafayette, Virginia Tech, Louisiana Tech and Baylor.

He made two tackles in the Louisiana Tech before he suffered a knee injury in his last game against Baylor. He was granted a medical redshirt season and would have had four years of eligibility remaining.

Hey folks,
I was on a ride along with TCSO just before T-Day, and yes, As Aaron stated it is primarily a car-to-car frequency. The officer I was with let me know that they prefer using 8 to the other talk about frequency because ch 8 is not being recorded, therefore they can talk a little more freely between each other.

Actually, Demand 63 and 64 are used for this purpose and have a training officer, a paramedic and 1 - 3 cadets. But, yes, it is used only for training purposes. Demand 1 is an impact truck and Demand 2 is used when the schedule is heavy and there are at least 2 extra paramedics. They usually go to Rescue 1's station for their shift.

1345. Attorney General - Executive Security is on 158.730

Yahoo group: CenTexComm
Date: 2002-12-09 14:40:06 UTC
From: Robert Barker
Topic: 1345 Message: 1345

I'm not sure about the 154.7325, that sounds kinda odd for a state security frequency. I had no idea Gregg Abbot in a wheelchair needed that much security. Usually all state security (the one that protects the governor) are done by DPS Executive Security and I would think they would do other state officials.. they are/were on 158.730 they have now pretty much gone digital but sometimes they are still in the clear. My friend also saw a secret service agent asleep last night in his car on 6th Street. I assume he was waiting for Jenna Bush to finish her bar hopping. (now that she's 21 and legal) I think 158.730 is also being used now at the DPS Headquarters for security (FM 2222 and Lamar)

The Attorney General has security escort everywhere he goes. I noticed it with the past A.G. Cornyn. I went to cover the swear-in of Greg Abbot. There were at least four guys with their Secret Service like earphones. I think they use 154.7325, but it sounds digital. Has any one heard anything?

1348. One accident victim was left behind for 3 hours in Lakeway

Yahoo group: CenTexComm
Date: 2002-12-09 22:03:19 UTC
From: Robert Barker
Topic: 1348 Message: 1348

Was anyone listening to this one:

Tonight on KVUE News at 6PM
An auto accident leaves 3 people injured. Two were taken to the hospital . . . One was left behind . . . for 3 hours. Learn what went wrong, the victim's condition now, and what D.P.S. has to say about it. Tonight on KVUE News at 6

Man left at Lakeway accident scene
12/09/2002

KVUE News

Three men are in critical condition at Brackenridge Hospital after the vehicle they were riding in slammed into a pole.

The accident occurred just before 1 a.m. in the 3500 block of Ranch 620 near Lake Travis High School.

Two men were found and taken to the hospital shortly after the accident. But the third man was apparently not initially found by emergency workers. He was found about 4 a.m.

No names have been released yet.

The cause of the accident isn't yet known

Hmm... If I was listening to the same one, there were three that were transported. Must have been another, though. Guess I'll have to watch that.

KVUE reported that the third person wasn't found by a limited scene search by DPS and AEMS. Apparently, that patient left the scene to get help. He was intoxicated and went the wrong way into the woods.

What gets me is that he had a cell phone and used it later to call his g/f instead of 911. It appears to me that he was trying to flee, but as I've shown, I'm not the most informed person. Hehehe...

1352. protest planned for 5 p.m. when banners will be hung from the Congress Avenue bridge.

Yahoo group: CenTexComm
Date: 2002-12-10 21:20:28 UTC
From: Robert Barker
Topic: 1352 Message: 1352
Attachments: 7 described; 7 payloads recovered; 6 useful images are shown below; 1 recovered file is retained separately and not shown in this PDF

Protest earlier today will be followed by another protest at 5pm during rush hour. Listen to 460.500 and 460.475 downtown.

Peace protest on UT campus
Updated: 12/10/2002 2:55 PM
By: News 8 Austin Staff

Peace activists around the country, and here in Austin, staged demonstrations today to mark International Human Rights Day. However, seven protesters were arrested during their demonstration.

At noon in Austin, more than 150 people gathered at The University of Texas' West Mall and marched to a military recruiting office in Dobie Mall. They said they expected some arrests

Their plan was to shut down the recruiting office. But when they got there the office had already been closed. A sign in the door said recruiters would return at 1 p.m.

Protesters decided to put up their own recruiting table to sign up people for peace.

After about two hours the managers of the mall wanted the protesters out.

WATCH THE VIDEO

Protest for peace

Antonio Castelan reports on a protest at UT.

When they refused to leave, Austin Police arrested seven protesters.

"I think it was outrageous that the manager had people arrested for non-violently peacefully recruiting people for the peace movement," said Lisa Fithiean.

Mall managers said this is the second time protesters have done this in the past month. They said the protesters were disrupting mall business.

Another protest is planned for 5 p.m. when banners will be hung from the Congress Avenue bridge.

1353. Capitol Metro on LCRA

Yahoo group: CenTexComm
Date: 2002-12-12 21:05:08 UTC
From: Robert Barker
Topic: 1353 Message: 1353

My friend who rides Capitol Metro got a chance to ask the bus driver about their radios. The LCRA radios have the following channels:

Ch 1 RT 1 (possibly stands for route and seems to be associated with Special Transit)
Ch 2 RT 2
Ch 3 RT 3
Ch 4 CM 1 (this probably stands for Capitol Metro and I assume these are the reg busses)
Ch 5 CM 2
Ch 6 CM 3
Ch 7 EOC
Ch 8 Direct * I really want to find this frequency ..

I know the Cap Metro talkgroups seem to be showing up at 05-021 and 05-022, etc I also know I have seen some in the 05-012, etc so I'm not sure what's going on.

650 05-012 Capitol Metro
652 05-014 Capitol Metro Fleet Maintenance
653 05-015 Capitol Metro - Maintenance
657 05-021 Capitol Metro Special Transit (Austin1

More than 20 cities, counties and public organizations use LCRA's system. Among the customers: the cities of New Braunfels and San Marcos, Bluebonnet Electric Cooperative and Capital Metro.

1354. Re: Southeast Austin last night

From: etlaesium <Etlaesium@netzero.net>
Topic: 1159 Message: 1354

I know that this is an old string, but...

Hopefully, when Austin goes to 800 Trunk, they will assign everyone on a particular incident to a TAC channel (PD,FD, and EMS). This would allow everyone on a scene to be able to talk to each other. EMS and FD already do it with FireComm 3 & 6, and it works well.

On the other hand, all Austin units have CAD and from what I've seen, updates are timely and forthcoming between Austin units. This changes a little when you are in the county, though.

It will be interesting to see, though.

1355. Well things are getting better as far as coordination among the agencies

Yahoo group: CenTexComm
Date: 2002-12-13 16:03:12 UTC
From: Robert Barker
Topic: 1355 Message: 1355

I get so frustrated listening to all the agencies trying to coordinate. Wednesday night about 5:30pm I was on my way home from work, there was a notification of a collision in the 15000 block of I-35 SB over Grand Avenue Parkway. EMS medic 18 and Pflugerville Fire were dispatched and told to coordinate on FireNet 153.950. Then EMS decided it was a city call and sent and RA (request assistance) to AFD and told Pflugerville to cancel. This part of I 35 is a major cluster because it's right where the city limits and the county limits are so they are always trying to decide if it's Austin, Pflugerville, Williamson County or Round Rock). So Pflugerville is cancelled and AFD, engine 28 responds to the call (AFD does not have FireNet)

About that time EMS, receives an RA from Travis County about a 2nd collision in the 14800 Block of I-35 and dispatches a 2nd EMS unit, Medic 10 I think. They again page out Pflugerville Fire. The Pflugerville chief comes up on Firenet and asks his engine if he is responding to 1 or 2 accidents on I35. They chat some on FireNet and realize they should go to Tac 2 154.145 which is the Pflugerville Fireground Channel. The driver of the Pflugerville engine says he is pretty sure that there is only one collision but they are going to check it out anyway. Pflugerville decides to back themselves up and send a 2nd engine just to be sure.

Pflugerville arrives in the 14800 block of the freeway and comes up on Firenet and tells EMS that they only see the one collision in the 15000 block and no 2nd collision. About that time, the 2nd EMS unit passes me on the freeway going to the 2nd (unfound) collision. EMS says this was an RA from TCSO and says they will send a message back to TCSO to see what's going on. (it would be nice if TCSO could also be on this Firenet channel or if either EMS or Pflugerville could go to a frequency and call the TCSO officer directly).. Pflugerville says there IS a TCSO unit on the scene at the 1st collision with AFD in the 15000 block and so they realize that this was all just one collision and AFD was handling it and the 2 Pflugerville engines and the 2nd EMS unit were not needed at all. All this took about 20 minutes to figure all this out.

They have made great strides putting EMS and AFD and the County Responders on FireNet 153.950 so things ARE getting better. However I am not sure the new system will help things that much. I still do not think a Pflugerville fire truck driver will be able to switch over to the TCSO dispatch channel and ask the dispatcher what unit requested the EMS unit for the collision and if there is just 1 or 2 wrecks on the interstate.

I personally think they should go out and paint a big blue line on the side of the concrete wall on the freeway median that shows where the city limits are. It would also help if they would paint the hundred block every once in awhile so there is no confusion for drivers. People have enough trouble keeping their attention focused on the road and shouldn't have to squint to try to see what hundred block of the interstate they are in by trying to read addresses posted on buildings on the side of the freeway.

Topic: 1355 Message: 1356

IMHO, I think Pflugerville should have taken a SB response while AFD came up from the south. They were already en route, why cancel them until you know that they aren't needed. This would also alleviate triple checking the highways for secondary wrecks when they are reported erroneously.

I wasn't a party to the call, so I'm not so sure of the circumstances, but I don't think that I would have cancelled anyone unless the MVA was clearly in Austin (but, then... is it another wreck??)

Where I originally come from (RI), any wreck on a divided highway would result in an Engine, a Ladder or Hvy. Rescue, and an ambulance. If it wasn't dead in the middle of a city, then they would get an engine from the next city over to come up the opposite way. That served a few purposes. It allowed an initial notification of a possible M/A call for an ambulance, and it put enough manpower en route to deal with secondary accidents (which tend to be worse than many of the primary ones).

Also, isn't that what intercity is for? Too much time is wasted when you start cancelling apparatus just to send other apparatus. They're already on the way! Cancel them once the others get on the way and show a lesser ETA.

Hmm... Am I ranting, or is this raving? Never did know the difference. Hehehe...

Again, my opinion.

well, i can tell u from a field paramedic point of view, a major accident is any collision that results in an injury that requires medical attention (imo). trauma is an action that causes damage to the body.

i think that the a/tcems system of cat i, cat ii, cat iii is a better way to define that. (i can post the criteria for cat i, etc if anyone is interested.

Thanks Chris, but I was speaking more as an IPN dispatcher than as a Paramedic, though. I was wondering about IPN's particular SOP's regarding the certain incident criteria because emails that I was receiving from them were very vague. Then, of course, I posted it to the wrong group.

But, I appreciate the offer. Btw, what shift/truck are you on?

I'd be interested in seeing the criteria for cat i.

Ryan

Thanks Chris, but I was speaking more as an IPN dispatcher than as a Paramedic, though. I was wondering about IPN's particular SOP's regarding the certain incident criteria because emails that I was receiving from them were very vague. Then, of course, I posted it to the wrong group.

But, I appreciate the offer. Btw, what shift/truck are you on?

From: etlaesium <Etlaesium@netzero.net>
Topic: 1360 Message: 1363

For copyright sake, I copied these from the SOC's that are published on the "http://www.ci.austin.tx.us/ems" website and are available to the general public for download in PDF format (sorry, just covering my butt).

But, here are the criteria for the Trauma CATs:

<u>CAT I (Immediate Trauma Patients)</u>

1. Glasgow Coma Scale of less than 13 (associated with trauma)
2. vital sign abnormality (as follows, only adult included)
BP: < 90 mmHg systolic
HR: > 120, sustained
RR: < 10, > 29

3. Depressed or open skull fracture
4. Flail chest (3 or more contiguous ribs fractured in two or more places)
5. Pelvic fracture
6. Paralysis
7. Amputation above the wrist or ankle
8. Two or more proximal long bone fractures
9. GSW to head, torso, or extremities above the elbow and knee
10. Stab wound with a BP: < 100 or HR: > 110
11. Burns:
a. Inhalation burns
b. 2nd or 3rd deg. burns covering > 20% of the body

<u>CAT II (Emergent Trauma Patients)</u>

1. MVC (with any of the following)
a. Ejection from moving vehicle
b. Death in the same passenger compartment
c. Roll-over > 90 deg.
d. Steering wheel damage
e. Pedestrian of Auto v. Pedestrian
f. Bicyclist of Auto v. Bicyclist
2. Extrication > 20 min.
3. Motorcycle crash at speed > 20 MPH
4. Stab wound to head, neck, torso with BP: > 100 and HR: < 120 (STABLE)
5. Any significant traumatic incident for patients < 5 y.o. or > 55 y.o.
6. Fall > 20 ft. (> 10 ft for patients < 5 y.o. or > 55 y.o.)
7. Venomous snakebite
8. Burns: 2nd or 3rd deg. covering <= 20% of body

9. Blunt trauma with complicating conditions (HIV, cancer,
hemophilia, pregnancy, etc.)

<u>CAT III (Delayed Trauma Patients)</u>

1. Single bone fractures; isolated extremity trauma
2. Abrasions, lacerations, sprains, strains, and simple puncture
wounds
3. Isolated cervical spine pain (no neurological deficits present)

1366. BC245 Mini-Review

Yahoo group: CenTexComm
Date: 2002-12-18 14:13:31 UTC
From: twn_tbo <twn_tbo@yahoo.com>
Topic: 1366 Message: 1366

Man, what can I say. This is a VERY crafty little piece of work for my first scanner. Works great, battery life is superb and scanning is a breeze and clear. Haven't gotten to try out the trunking abilities yet, but I was able to listen to the Tonight Show with Jay Leno up at my ranch on KXAN believe it or not. We got the scanner at a place called Valco-Tronics for 206.50 shipped to my doorstep. I've had it since October and it it a neat little thing.

1367. BC245XLT Mods

Are there any modifications for this radio out that could improve reception or anything?

1368. BC245 Trunktracker just try and get a better antenna

Yahoo group: CenTexComm
Date: 2002-12-18 14:21:56 UTC
From: Robert Barker
Topic: 1368 Message: 1368

The best improvement you can make to the BC245XLT Trunktracker is to get rid of the stock antenna it came with and get one that is more tuned for 800 or 900 Mhz. Unfortunately a decent antenna will run at least $25-35. Of course that depends on what you want to listen to and if any of it is in that frequency range. I'm not sure if there are any 800-900 Mhz antennas available locally that have the BNC connector on them. Does anyone know of a good source??

I have talked to many people who are trying to monitor LCRA and other systems like Williamson County and say, they lost the trunk signal from the control channel. This is almost always just poor reception.

I purchased a RS 20-034 for my Pro-95 and can receive both
Williamson Co Trunked service and LCRA very clear from Pflugerville.
I have an occasional drop if I wander near my wireless access point
for the computer, but otherwise it works very well.

From: Robert Barker
Topic: 1374 Message: 1374

Some really bad fires.. 11600 Buttonwood.. I missed it but woke up at the end to hear that 2 children (age 13 and 15) were killed in the fire. Firemen were not able to get to them. Then, a 3rd child 8 yo male was extracted with CPR in progress but later died . . Then a 30 YO male was extracted and they transported him Cat 1.

Then I woke up two the 2 alarm fire at 6th and Red River. I still don't know what business it is. A victim was pulled from that fire also with CPR in progress.

Does anyone know where Austin Energy went. The main freq was 451.025 but they are gone.

6th & Red River was Custom Tatoos and an apartment above it. An approx 40-50 y.o. male died in the fire (he lived in the apartment above the tatoo parlor), but I think EMS was able to resuscitate a cat (hey, I had to get some good news in there... it is X-mas time).

As far as CoA-Energy, I have no clue.

Figuring I may run into some "day after" Christmas bargains, I headed down to the San Marcos outlet mall. I immediately saw the very heavy use of FRS radios.. Most all transmissions were in Spanish as many cars in the parking lots were Mexico plates. They were all just there shopping.. tons of people who must all cross the boarder to do their shopping. They have a more advanced knowledge of having so many FRS radios.

YES! I've been out there with the after-thanksgiving crown and found it quite challenging trying to find a usable FRS channel. With the release of GMRS+FRS radios, might have to start listening to GMRS channels now.
The thing I noticed most is that you will see a lot of kids playing with them. Sure would be more useful to give them the 49 MHz radios to play with and let the older folks "use" the FRS radios.
I think I've also caught folks using itinerant business channels out there too. They are available at Radio Shack and other stores too.

FRS - excellent frequencies to have in the scanner at all times. I spend quite a bit of time in Haiti and have noticed the FRS freqs are quite active there also. I heard some chatter on one of the FRS freqs last year when flying near Cuba.

I have recently seen some 'FRS-GMRS' radios - it may be interesting to monitor the soon to be abused GMRS freqs. I have never listened much to GMRS but I suspect there may be some friction between the 'legitimate (licensed)' users and the new comers.

A few weeks ago I bought, at Sams, a couple of VHF radios for business use. These are Motorolas and are field programmable to any of 20 or so frequencies in the VHF band. There was a little 'note' included stating that a FCC license is required to operate. I doubt many people pay much attention to that. As these well built but inexpensive radios are widely distributed we may expect to hear more unlicensed operations on those frequencies.

Does anyone know if the Privacy channels on the new GMRS freqs are just CTCSS tones. I'm wondering if people are going to start opening up GMRS repeaters accidentally? Or are freqs the GMRS+FRS radios being sold not the repeater inputs?

YES! I've been out there with the after-thanksgiving crown and found it quite challenging trying to find a usable FRS channel. With the release of GMRS+FRS radios, might have to start listening to GMRS channels now.
The thing I noticed most is that you will see a lot of kids playing with them. Sure would be more useful to give them the 49 MHz radios to play with and let the older folks "use" the FRS radios.
I think I've also caught folks using itinerant business channels out there too. They are available at Radio Shack and other stores too.

It is illegal to operate simplex on GMRS input channels. That doesn't mean it doesn't happen.
But the radios sold with FRS and GMRS are using the output channels (462 MHz).

Yahoo group: CenTexComm
Date: 2002-12-29 13:07:05 UTC
From: Frank E Jacks, Jr
Topic: 1191 Message: 1384

I'll be travelling from Austin to San Antonio in a few days for a mini-vacation. I'll be staying in the Comfort Suites at S Laredo & Guadalupe.
I've visited Trunkedradio.net and gotten the trunked systems for SA Public Safety Systems for Central, Northeast, and Northwest and also the Bexar county system.
But I still have several questions:
1) which specific system will cover the area where my hotel will be;
2) are there any business/non-public safety systems that will be useful or interesting for me while at the hotel and siteseeing;
3) which of the military system sites would be the most interesting and closest to my hotel.
I'll be using a pro-93 scanner most of the time with the stock rubber duck antenna.
Thanks in advance for all of the help, and sorry for the cross posting, but wanted to get as much information as possible.

1385. One Dead As Car Plunges Into Colorado River

Yahoo group: CenTexComm
Date: 2003-01-02 13:59:52 UTC
From: etlaesium <Etlaesium@netzero.net>
Topic: 1385 Message: 1385

It was a tragic start to the new year. A woman is dead after a car carrying New Year's Eve party-goers plunged into the Colorado River.

Authorities say it was after 9:30 pm Tuesday night that a car carrying what is believed to be five people missed a turn on Caldwell Lane and fell more than 20 feet into the river.

As of Wednesday night, DPS divers are still looking for a possible fifth person that may be in the Colorado River. They are still not positive there is a fifth person because the story of the driver has changed. But that's still not stopping authorities from exhausting all search efforts.

There was an intense rescue effort as dive teams from DPS AND AFD, along with Starflight, searched for all signs of life late into the night.

Three of the people inside the car were able to escape once the car hit the water. They are 21-year-old Herbert Lee Williams, 30-year-old David Scroggins and 21-year-old John William Gallagher. All were taken to Brackenridge Hospital and treated for minor injuries.

A 36-year-old woman was not so lucky. Her body was recovered from the car Wednesday morning after being trapped in the water overnight.

Authorities are still investigating what caused the crash but neighbors say it's a tough corner to navigate and notorious for accidents.

"Around a corner like this [the speed limit is] 25, but people I know try to go around it at 45 or 50," said resident Johnny Hays. "But sometimes they cannot make it."

"In essence, it looks like the vehicle drove off the roadway as you can down here and just made a straight shot through the trees, said Warren Hassinger with Austin-Travis County EMS.

There is still no word whether charges will be filed against the driver. He did make it out alive. In the meantime, authorities will continue their search for that possible fifth person.

From: Sly & Debbie
Topic: 1388 Message: 1388

From what I've heard no, it will have a 9600 baud control channel.
Which means the new digital scanners (250d and 785d) will not be able to
track the new system. However you will be able to monitor it in
convention mode as the 250d and 785d will be able to decode the digital
voice channels. Its just the 9600 baud control channel that the new
scanners won't handle. Supposedly
they are working on even newer scanners for next year that will do the
9600 baud.

>Does anyone know if the new Austin APCO-25 system will have a 3600 baud

From: Robert <rbarker@austin.rr.com>
Topic: 1397 Message: 1397

I know we had this discussion before so I went searching the prev
messages:

From: "Robert Barker" <rbarker@...>
Date: Fri Aug 4, 2000 3:06 pm
Subject: Re: [CenTexComm] Leander

John and the group. I called Leander PD and they confirmed they are
using a digital radio system and have been for about 6 months now. I
assume it is those new frequencies. She said they had to change out
all the radios in the cars so that would explain the new frequencies.
She said they can talk to Cedar Park on Tac 3 which she thinks is
154.950 Intercity. She also said they hope to be able to eventually
link to the Williamson County system. Not sure I know how they would
do that.

So 460.025 is now the city crews in Leander
and the Fire is using 155.355
Wow, 3 different type radios all in the same little city.. bad idea.

1400. From Today's Austin American Statesman RE: the last Antenna needed to complete the new system

Yahoo group: CenTexComm
Date: 2003-01-09 16:23:39 UTC
From: Robert Barker
Topic: 1400 Message: 1400

Antenna set for ex-official's land

A radio project by more than a dozen government entities, including Austin and Travis County, will pay a former county justice of the peace to use some of his land for a radio antenna tower under a deal approved Tuesday by the county Commissioners Court.

Scott A. Davis will be paid more than $11,000 a year for the use of 1 acre just over the southwest Travis County line in Hays County, near Hamilton Pool Road.

The tower is the final piece of infrastructure needed as part of a $70 million project that would put Austin and Travis County emergency authorities on the same radio system. The project is scheduled to go online in October.

Davis retired last month after 14 years as the Precinct 3 justice of the peace. He said members of the project team called him unsolicited last year and said his land was ideal for the antenna. After the county attorney's office told Davis there was nothing improper about the deal, he agreed.

"I told them it's going to look funny, but nobody seemed to care," Davis said. "Nothing improper was done, and I feel real good about it."

1401. Leander PD regular repeater

Yahoo group: CenTexComm

1407. boat show

Yahoo group: CenTexComm
Date: 2003-01-10 04:56:44 UTC
From: Jose Esqueda <memo124@yahoo.com>
Topic: 1407 Message: 1407

I stopped by the Boat show for a short while in the morning.

462.6375 was used for the exhibitors entrance at the convention center.

464.500 someone got called to vaccum an area of the convention center.

822.775 this is a weird one. I programmed it in my scanner but all I heard what it sounded like trunk noise. I saw someone talking on the radio. I heard the same noise again while they were talking. I also picked up another frequency similar to this one but it went away. I was using my frequency counter.

I did not pick up the old 453 frequencies.

1408. KVUE report on new radio system..

Yahoo group: CenTexComm
Date: 2003-01-10 22:31:47 UTC
From: Robert Barker
Topic: 1408 Message: 1408
Attachments: 4 described; 4 payloads recovered; 4 useful images are shown below

Check out the video:
http://www.kvue.com/news/local/010903kvueResponse-eh.8ad3c5a.html

Article sites the major problems with the SETCO rescue that occurred New Years Eve when DPS, water rescue, dive teams and EMS, Fire and Sheriff were not able to communicate with each other. They say the system will be in place in October. "The biggest problem on any major call is ALWAYS communications. The inability to talk to with everyone on the scene has been a constant burden. This new communications system will change that" AISD, The University of Texas, and Capitol Metro will hopefully join the system later on the report says.

New radio system will help in emergencies
01/10/2003

By Amanda Lawson
KVUE News

Emergency crews in Austin say the hardest part of responding to a major emergency is not being able to talk with everyone at the scene.

KVUE's Amanda Lawson reports

Play Clip

Requires RealPlayer or RealOne, get the player:

As the system is now, each agency has to communicate with its own dispatch center, instead of being able to relay information from one agency to another in the field.

Crews say in cases where three or four departments are working an accident, the cumbersome communication system eats up valuable time.

A new system is now in the works.

"The new radio system allows us to tie those radio systems together, so we have that seemless radio communications and operability between the different departments and the city and the county," says EMS Communications Commander Greg Middleton.

Under the new system, crews responding to a scene will all be assigned the same frequency channel.

The new system is expected to be operational by late October

1414. DOZENS OF AIRCRAFT TO SOAR OVER TEXAS CAPITOL, DOWNTOWN AUSTIN Wednesday

Yahoo group: CenTexComm
Date: 2003-01-13 12:42:51 UTC
From: Robert Barker
Topic: 1414 Message: 1414

DOZENS OF AIRCRAFT TO SOAR OVER TEXAS CAPITOL, DOWNTOWN AUSTIN

Flyover part of festivities honoring 100th anniversary of first flight

Waves of airplanes ? including warbird, experimental, military and vintage aircraft ? will fly over downtown Austin and the Texas Capitol on Jan. 15 as part of a year-long, national celebration of the 100th anniversary of the first flight of a powered aircraft. Dozens of airplanes from across Texas will participate in the 30-minute flyover, which will begin at noon on Wednesday, Jan. 15.

Although the historic flyover will be visible from many places in downtown Austin, a narrator stationed on the south steps of the Capitol will provide commentary. Most of the planes will gather at the Commemorative Air Force (CAF) Hangar at San Marcos Municipal Airport for a briefing before making sequenced takeoffs, proceeding to orbit points southwest of Austin and then, in staggered order, soaring over downtown Austin at 1000 feet above ground level.

?From current military aircraft, to World War II warbirds, to experimental aircraft, to general aviation aircraft, to vintage aircraft, those watching the flyover will gain an appreciation of Texas? aviation legacy as well as an understanding of just how far aircraft have evolved over the years,? said Col. Stu McCurdy, USAF (Retired) who is organizing the flyover as one of several events planned in Austin in January as part of the ?Centennial of Flight Celebration.?

Centennial celebratory events will take place across the United States during 2003 to commemorate the 100th anniversary of the first powered flight by Orville and Wilbur Wright. The Austin events, sponsored by the Texas Aerospace Commission ? and timed to coincide with the opening of the Texas legislative session ? will showcase the historic contributions and current state of the Texas aerospace community as well as highlight its importance to the state?s economy.

Although the Wright Brothers? historical achievement took place in North Carolina, a Texas tribute is appropriate, said Norma Webb, chairman of the Texas Aerospace Commission.

?The Centennial of Flight Celebration recognizes Texas? notable aerospace heritage,? Webb said. ?Texas has played a major developmental role as both aircraft and spacecraft have evolved over the last century. Our state has been at the forefront in the design and manufacture of aircraft, the training of military and commercial aviation pilots, and, of course, the exploration of space.?

Aircraft featured in the flyover will include:

? Vintage aircraft, such as PT-19, Stearman, early Cessnas and Piper Cubs.

a.. General aviation planes, such as Bonanzas in formation, Cessnas, Pipers and Mooneys.
b.. Experimental aircraft, including ?Falcon Flight? flying numerous RV aircraft in formation, Lancair, Glasair, Rocket, Heath Parasol, Skyote and Pitts Special.
? World War II airplanes from the Commemorative Air Force, Lone Star Flight Museum, Cavanaugh Flight Museum and Vintage Flying Museum, including A-26, B-25, C-47, P-39, P-40, P-47, T-6, T-33, T-34, Corsair, Wildcat, Spitfire, Kate, Zero and L-39.

? Aircraft from various Texas military bases, such as Randolph AFB, Dyess AFB, Fort Hood and Air National Guard and Reserve sites, to include B-1, C-5, T-6, T-37, T-38, T-43 and helicopters.

In addition to the flyover, other ?Centennial of Flight Celebration? events include:

? Aviation and space exhibits at the Texas Capitol from Jan. 13-26. The exhibits will highlight historic aviation and space exploration milestones, as well as detail current and future initiatives.

? NASA Johnson Space Center?s ?Benefits of Space? semitrailer, parked at 18th and Congress in Austin (Jan. 13-17). The exhibit will spotlight how technology derived from the space program touches our lives each day;

? An evening reception at the Bob Bullock Texas State History Museum in Austin on Jan. 15 to recognize Texas? state and federal lawmakers, state officials, event contributors, representatives of the aerospace industry and other invited guests. Tickets are $75;

? Recognition by the Texas Legislature, which on Jan. 15 will pass proclamations to mark the event.

1415. First day os session

I think Pflugerville PD on 155.415 is 151.400PL

I can't believe with about 10 officers on duty at one time, that they do not have a repeater.

The 154.665 with DPS is the input to the 159.210 repeater for DPS possibly in New Braunfels. They use different PL's to access different towers. It is my understanding that there is another 159.210 mobile repeater in Paleface (Hwy 71 west) that should be accessed with a different PL but I have never been able to confirm it.

I noticed DPS uses a PL of 107.2 on their 154.665 MHz mobile frequency.

Does anyone have the correct PL tone for Pflugerville PD?

From: Robert Barker
Topic: 1424 Message: 1424

OH yeah.. sorry the 159.210 repeats both the dispatcher and the mobiles.. my bad. Sometimes they simulcast on that and on 155.460 at the same time and other times they don't. I do not know why they never use the Paleface repeater. I was told it works but I almost never hear it.

I wish DPS would use a repeater all the time.

When Travis County Sheriff has a major incident working.. they close the channel to regular traffic. If an officer is on a chase or an in-progress call, then they will freeze, or close the channel to keep all radio traffic at a minimum in case the officers get into trouble.. until a CODE 4 or an ALL CLeAR is issued.. and then they will resume normal radio traffic. The beeps tell you that the channel is closed.. but I always thought it was stupid that officers are usually trying to sneak up on someone like a robbery in progress when their radio is sitting there beeping like that.. it seems kinda stupid to me.

So no other traffic is allowed? Do they, Travis County, then use
other frequencies while that one is closed or use the channel anyway
in a high priority need? Interesting...

If lets say TCSO channel one (154.085) is closed they will probaly switch over to TCSO channel 3 (155.310) and let the west dispatcher handle there traffic .Or depending on how many dispatchers are up at Comm they will move all of channel ones normal traffic to TCSO channel 2(153.935) if theres like a SWAT or a stand off going on they will close the channel off and move everything over to Channel 4 aka inner city regarding the call and the other comm channel will handle the other calls for both sectors .Up in Round Rock it's a lot simpler they have two channels north and south they will come up on the radio and south command is closed north and south will be patch so the south dispatcher can handle the call on one of the tac channel with no beeps saying the channel is closed .Hope that made some since

Thanks all. It makes sense, just interesting that they close the primary channel to divert everyone else when I am accustomed to the primary being left open, BPD(Birmingham)moves high priority or chase activity to specific channels. The TC activity over here on the NE side is realitively heavy although they are slow to dispatch. My neighbor called not long ago for someone breaking into her car, I heard the call and went to check on her. She said she had called more than 20 minutes earlier and the wheels were gone on the car.

Ok so if you heard them on 868.800 in the clear, that means they were transmitting SIMPLEX in the CLEAR..
So we can mark that one down as a talk-around, or direct frequency for the new system.

I show Medina County SO (just west of SAT) using 155.640 with PL of 203.5 Hz.

155.475 is a nationwide law enforcement emergency frequency in other parts of the country. Don't think it ever caught on here in Texas since we had Intercity already.
The closest licensee I see to Central Texas is the Burnet County SO.
Don't know if they use it for regular comms or if it is just programmed in like so many other agencies for that "emergency" use for which it was intended.
No telling who you might hear on that frequency.

I have a lot of frequencies on my list posted here in the FILES section.
http://groups.yahoo.com/group/CenTexComm/files/BYFREQ.LST.doc

155.640 Input to 154.845 Travis Co Ch 6
154.965 Street & Bridge Ch 2 - Does Have Phone Patch (153.755) * I think we are hearing Smithville PD on the Animanl Control"s Input, 153.755 using the same tone needed to key the Austin repeater..

As for Pflugerville on 155.415 I have no idea what else they could be using but I'd start with that city freq for the MUD district 153.905

Medical chopper service grounded amid labor, safety concerns
Crew members refuse to fly until grievances aired with county
By Tony Plohetski and Steven Kreytak

AMERICAN-STATESMAN STAFF

Thursday, January 23, 2003

The medical helicopter service serving Austin and Travis County was grounded for much of the day Thursday after crews refused to work amid labor and safety concerns.

After months of growing tension, the 25 STAR Flight pilots, nurses and paramedics decided at noon to no longer fly until they could discuss grievances with Travis County Commissioners, who run the service jointly with the City of Austin.

STAR Flight began receiving calls for service more than six hours later after an evening meeting with commissioners; There were no calls for service during the suspension. The service is expected to operate uninterrupted through Tuesday, when the court will take up the issue again.

During Thursday's meeting, the group expressed concern about the impact of a decision the commissioners made earlier this week.

County officials on Wednesday reinstated the program's former director of operations, Spankey Handley, while he is suing the city and county alleging program mismanagement.

Handley, had been reassigned since October because crews expressed concerns about whether distractions from the suit would hinder his ability to safely fly.

"It wasn't an easy decision," said Jason Martin, president of the Austin-Travis County Emergency Medical Services Employee Association. "They agonized over it, but they said they would not be able to fly until this gets addressed."

Thursday's so-called "stand-down" was the longest in STAR Flight's 17-year-history. During the suspension, emergency officials would have been forced to use only ground ambulances in Travis County and would have directed calls from surrounding counties to helicopter services in Georgetown, Temple, Kerrville and New Braunfels.

The last time STAR Flight helicopters were grounded for similar problems was about seven years ago, allowing crews and program officials to discuss a series of minor safety violations, EMS officials said. That suspension lasted for two hours.

Martin said concern about distractions from Handley's suit has been brewing for several months. Association members met with STAR Flight officials in December to talk about whether Handley's suit was distracting them.

However, they decided at the time that concerns about his legal action would not jeopardize their performance.

1458. Re: [CenTexComm] Pflugerville PD and Fire Frequencies

Yahoo group: CenTexComm
Date: 2003-01-24 15:19:18 UTC
From: Robert Barker
Topic: 1458 Message: 1458

Pflugerville PD is on 155.415 simplex.. Both the base and the mobiles are on that frequency. If you are having trouble hearing the mobiles.. consider a better antenna or an outside antenna.. You do have to be close to hear the mobiles.

Fire is on 154.145 but with the new county wide dispatching they are usually dispatched on 153.950 (I thought dispatching was supposed to be on 154.175 but it's not) Both of these are repeaters Fire uses 153.920 as a ch 2, but it is simplex.

153.905 is used by the city of Pflugerville for turning on water meters and shutting people off who don't pay. This is also simplex.

From: Michael Maretka
Topic: 1458 Message: 1461

That should say the other reason is they have MDTs inthe car along with there nextels and the FD switches over to 154.145 when working a call most of the times

Sorry guys don't know what happen on the other email hope this one clears it up a little

Michael Maretka <fireman_mikey2002@...> wrote: Ok sorry for the late reply i was at work and no computer ,The Pflugerville Police Dept are on simplex so thats one reason the other reasover to 154.145 when working a call most of the time on is they now they have MDT in the cars so alot of silence dispatch is going on along with the nextels Pflugerville Fd still is paged out on 154.175 (AFD COUNTY PAGE OUT)they also get toned out on 154.145 then they go enroute on 153.950 and switch

Robert Barker <rbarker@...> wrote: Pflugerville PD is on 155.415 simplex.. Both the base and the mobiles are on that frequency. If you are having trouble hearing the mobiles.. consider a better antenna or an outside antenna.. You do have to be close to hear the mobiles. Fire is on 154.145 but with the new county wide dispatching they are usually dispatched on 153.950 (I thought dispatching was supposed to be on 154.175 but it's not) Both of these are repeaters Fire uses 153.920 as a ch 2, but it is simplex. 153.905 is used by the city of Pflugerville for turning on water meters and shutting people off who don't pay. This is also simplex.

1462. 155.475

Yahoo group: CenTexComm
Date: 2003-01-25 02:43:19 UTC
From: Daynes Hornsby
Topic: 1462 Message: 1462

I heard comms on 155.475 last summer in I-35 north of San Antonio. Did not sound like police comms. Sounded more like a security guard at a gate communicating with people inside.

This is weird, they had a Burglary in Adam Sector on Burgundy CV in Lamplight Village off Parmer and Metric.. K9 and Air 1 have been circling the area for almost 2 hours looking for suspects.. APD went way overboard looking for the suspects.. the helicopter was circling and circling and circling like they always do. Then just now A390, the sergeant came on the radio and said would you please log in the call that the homeowner has just kicked us out of his house and wants no further assistance from APD. Sgt. just told his units to continue canvassing the neighborhood but don't go back to that address. They must have really made the guy mad.

Either that or they were about to stumble onto something he didn't want them
to find.

Yes, crooks can be stupid. They have called police to report their drugs
being stolen.

Subject: Dispatch: Premium Renewed

Thank you for your dispatch contributions last month.

While the number of pages you sent was lower than we normally consider "active", we have renewed your free Premium membership for another month. Accounts with less activity are usually limited to a single chapter, however your Premium status is being extended as a courtesy for prior contributions.

Generally, we ask that dispatchers send at least 3 to 4 unique incidents per week in order to remain Premium Dispatch Members. All accounts are reviewed by computer each month & accounts are adjusted automatically.

If you have any questions regarding your account or the dispatch program, please let us know.

Thank you,
IPN Technical Support Team

There may be hope for us here in Austin yet.

RS/GRE Digital Scanner In Works!
Posted on 01/25/2003 14:38 EST

We recently received the following information and after talking to the program manager of the project to help ascertain its credibility, we offer the following for your enjoyment:

I work with a team of engineers who is assisting Radio Shack and GRE with the development of Radio Shack's first
digital trunked scanning receiver. We are very excited about this radio and thought your readers might be interested in knowing a little bit about it.
The user interface and receiver are built around the very successful PRO-93/95 radios, with some significant enhancements:

The radio has 500 channels in 10 banks of 50 each
There are 150 trunked IDs per bank, in 5 ID sub banks of 30 each
Users can perform "open mode lockout" - lock out undesired new or existing IDs while in open mode, a great tool for catching new talkgroups!
It is now possible to perform manual ID hold without waiting for the talkgroup to become active
The radio will track UHF and 800 MHz Project 25 9600 BPS Control Channel systems!
The radio will track all Motorola 800 MHz splinter system types
Users can now edit the Welcome screen, just like the PRO-92
Full FIPS/SAME NOAA weather radio capability, with 10 FIPS code slots
A new FRS/GMRS/MURS search range
A temperature controlled crystal oscillator (TCXO) is used to ensure frequency stability at all temperature ranges - very important for digital!
There is a revolutionary, patented scanner memory management system - you'll have to wait for details but trust me, it will be a very popular feature!
There are some control channel analysis tools that users will find very beneficial, again, you'll have to wait for full details!
The radio will be a handheld scanner similar in size to a PRO-93 or PRO-92

One of the most exciting things about this radio is the digital DSP decoder system!
The radio is fully digital ready - there are no add on cards to purchase
The radio will decode any digital system that is compliant with Project 25 Phase 1 - essentially this means no VSELP, but all ASTRO IMBE and P25 digital modulation types are supported
There is a really cool DSP feature that I can't give details on just yet - but you will know it when you see it in the manual!
No special quality settings are needed for different digital system types - you can scan different systems in the same or different bands simultaneously without changing digital quality settings
The cost is expected to be in the $499 range, and the radio is expected in stores around November 2003.

So there you have it. Sounds like quite the revolutionary product and a new direction in scanner design! It sure looks like Uniden won't be the only game in town for long and it will hopefully breath some life into RadioShack's lean scanner product line.
We thank the gentlemen working on this project for sharing this news scoop with us and hope to hear more about this product in the near future!

Here is Rich's reply to an e-mail questioning the validity of the above:

Posted by Rich Wells, N2MCA [e-mail] on January 25, 2003 at 21:54:31:

In Reply To: Re: New RadioShack Digital Scanner ?? posted by Brett - N7OLQ on January 25, 2003 at 15:49:32:

> Part of me thinks someone's pulling a fast one on Rich

That's what I thought of at first, as well. It's also why it took me over 24 hours to do my best and use all sources to try and get to the bottom of things. At this time, with all the people I have talked to and to those who have contacted me in regards to this above and beyond those mentioned in the news article, I believe in this project 100% at this time.

My personal take on the situation is that this represents a shift in how the developers and manufacturers, at least for RS/GRE, are treating the hobbyist community, with a more open attitude of sharing and involvement. I was also led to believe that the comments of hobbyists on the Internet, and this site in particular, played a direct part in helping to mold and direct this project and the radio which shall result from it.

If this project/radio is a success, let's just say that the future looks bright for future development and hobbyist involvement.

Topic: 1480 Message: 1480

Returning home this AM after running erends in town, I hear on the news that someone ran off the road at the end of Caldwell Lane into the river -- again. Yes, comming home, there are the sheriffs units, and all the local news trucks parked there at the end of Caldwell Lane. AND the barbed wire fince and t-posts that had been put up after the last incident were indeed all torn down. Seems some people are bound to make the same mistakes over and over again.

Subject: [satscan] Fed ASTRO operations

Ok, further discussions offline indicate the 172.800 is the TSA (Transportation Security Admin) - they have numerous repeaters going up nationwide for Airport Security operations - all in APCO-25 Digital Un-encrypted mode. This is an old FAA freq assignment.

But, came across another ASTRO Digital Fed Repeater in San Antonio this morning, 164.5375. Anyone have any ideas who this one belongs to?

** If anyone knows of any internet sites when you can link to hear scanner or any traffic relating to Shuttle recovery operations, let me know.. Would love to get a link for Nacogdoches County Sheriff. **

A new protocol will be put into effect at 9:00 AM tomorrow, Tuesday, February 4. As a result of this, we are asking all Amateur Radio operators willing to help in the Columbia Shuttle recovery effort to bring a vehicle (4X4 especially welcomed), mobile 2M FM, GPS that is a minimum of 12 channel capable, digital camera, paper and writing instruments (pens preferred), letter sized clip board and a cell phone. Additional equipment that would be helpful but not required would be a lap top computer with StreetMapUSA or something similar loaded, 70cM FM mobile, and binoculars. If possible, everyone should be self-contained, with a bed roll and all personal items they may require. Arrangements have been made to house people at the Expo Center in Nacogdoches, which means a cot in a common room. Food is also available for all workers involved in this project.

Please keep track of your time and mileage each day. This should either be passed to the net control station, or via e-mail to ae5p@... . This information will be submitted to the State, but we make no guarantee that there will be any reimbursements.

We would like to know in advance if possible when you expect to arrive in Nacogdoches, and how long you expect to be able to stay. We would also like to know your cell phone number.

Thanks very much, and we look forward to seeing you here.

==========
Shuttle Recovery Operation Update 2

CONTACTS:

I had a lengthy discussion with Kevin, KD5CCH tonight following their meetings. Johnny, K5JD and I are going to be in contact with him on a daily basis to identify needs. For this week we hope to be able to give you notice of their needs for the next two days. Early Tuesday evening we hope to learn of needs for Wednesday and Thursday. Wednesday we hope to learn of needs for Friday and Saturday plus any changes for Thursday. By keeping a few days ahead we hope to avoid sending people to the site that are not going to be needed. As the situation stabilizes we may need fewer than expected hams and/or be able to shorten some hams' stays.

IMMEDIATE NEEDS:

We have been asked to stand by for Tuesday and allow the local situation to stabilize.

If you have not committed to me to report to Nacogdoches Tuesday morning, please do not go. I had three hams commit to that report time, Mark KD5TTT Dallas RACES 739, Hark Harper (KD5TAO), and Woody Harper (KD5TAP).

The situation is very dynamic at present with resources continuing to arrive from multiple agencies. Based on this evening's meeting, our involvement may last two weeks with 40 to 50 amateur radio operators being needed per day for the next week or so. Note that this can change dramatically depending on developments and the actions to be taken by various agencies.

THIS WILL REQUIRE HELP FROM HAMS THROUGHOUT THE STATE, NOT JUST DALLAS. THEY NEED THE ENTIRE AMATEUR COMMUNITY'S SUPPORT.

The important thing is to communicate amongst ourselves to prevent unnecessary expenditures of time, money, and goodwill. Especially the good will of our families and employers. Please let me know if you can commit to times of service, arrival date and how many days total.

1486. Shuttle Debris Collection

Shuttle Debris Collection

Guidelines for the Collection of Space Shuttle Material
by Public Service Personnel

The following guidelines are designed to assist public service personnel to determine when and how to collect and document space shuttle material. If the material is less than 18 inches in length and does not appear to be hazardous, then it may be collected under the following guidelines:

Authorized Public Service Personnel:
Local, State, or Federal Law Enforcement Personnel
Fire, Medical, or Emergency Services Personnel
US Forest Service or Texas Forest Service
Federal Emergency Management Agency (FEMA)
Environmental Protection Agency (EPA)/TCEQ & CST
National Aeronautics and Space Administration (NASA)
Individuals from any of these agencies will be able to provide verifiable identification.

Encountering Hazardous Material:
Hazardous materials may be associated with the space shuttle. If you suspect that hazardous material is present, secure the area and call 936-699-1032/1034 to report what you have found. Specially trained personnel will be dispatched to recover the item.

Potential Hazards (DO NOT TOUCH):
Stored Energy: High Pressure Tanks and Cylinders. Landing gear and tires.
Monomethyl Hydrazine: Clear liquid stored in tanks, strong fishy odor.
Nitrogen Tetroxide: Greenish liquid or brownish vapor, stored in tanks, bleach like odor.
Ammonia: Clear liquid, stored in tanks, very strong ammonia smell.
Pyrotechnic Devices: Landing gear, window frames, crew seats, hatches and antennae.
Biological Material: Any biological material, including human or animal remains.

Procedure for Collecting Shuttle Material:
Photograph items before they are moved. Carefully document the location of the items (to include GPS data if available). Attach a tag to the item with the location the item was found and the name and

phone number of the individual collecting the item. Include any information you think may be relevant to the investigation. Documentation for large items may be recorded with permanent marker directly on the hardware. Wear gloves (preferably not cloth) when handling items and do not open, adjust or move any switches, components or boxes. If possible, seal the item in a plastic bag. Transport the item to your local command post.

If an item is marked SECRET, CONFIDENTIAL, or SSOR do not leave the item unattended before handover to NASA personnel.

Astronaut crew remains information should be relayed directly to 936-699-1032/1034.

With any questions or for more information, please contact DPS at the Lufkin Emergency Operation Center, 936-699-1077.

You can check this website daily for notifications of FCC licenses that are issued, renewed or any changes made.
http://www.scannermaster.com/scanner/en/frequency/fcc/

They will require you to register but there is no fee. Has anyone gotten a new 2003 Police Call guide from any local store?(Radio Shack?

clearing codes are for the cad record to close out a call. units can clear
b, stdh, sah, hh, s, ot, dual, rf, rb, will, etc. these are all cad codes
for clearing, b-brack, s-seton, rf-referred, rb-referred back,
will-referred to williamson county, etc. dual is when more than one unit
are onscene of a call and the unit(s) not transporting nor obtaining
refusals (ru-refusal) will clear dual.

is that clear as mud? chris

1490. New Scanner Coming...Need Hep!

Yahoo group: CenTexComm
Date: 2003-02-07 03:15:59 UTC
From: M.D. Boyer
Topic: 1490 Message: 1490

Hey all:

I haven't scanned frequencies in more than 20 years. However, tommorrow I'm taking delivery of a brand new Uniden/Bearcat BC785D scanner, and I need a little hep...

Since I went a scannin' last, a whole lot has changed out there. If there were anything such as trunked systems, they didn't exist around here (Austin, Texas), not to mention digital stuff, and all those terms and "services" out there...wow.

To maximize the capability of the new box, I want to know a lot more about how all of these various systems work, and how I can monitor them. The new scanner will have digital capability if I buy a board. I'll do that later, if there's enough out there using that system to listen to. And as other boxes able to monitor even newer trunking and transmitting technology comes along, I'll get those too, one at a time.

But first things first. I need a real solid source, well written, that covers it all as of this technological date. I can handle technical subjects, so don't worry too much about things getting thick.

I also need comprehensive frequency listings for every damn thing that radiates a signal out there. I'll have over 1,000 channels to stuff, so I need lotsa stuff.

If anybody cares to give me some recommendations or guidance, I'm all ears.

One other thing. This new catbox is coming complete with a telescoping indoor antenna. If it's anything like the rubber duck antenna I got with my amateur HT, it'll probably suck. So, if anyone can offer solid suggestions on outdoor antennas (multi band verticals would be best for me), I'd be grateful. I've looked around on the web and spotted a lot for under $50, but they all look like junk to me. I've also scoped out a "Scantenna" from Austin Antenna for about $250, so what are my options?

Thanks to all for any help, and

73

Subject: BANK ROBBERY

The following can be viewed on line at
http://www.ci.austin.tx.us/police/release4_0203.htm

BANK ROBBERY
Case: 03-0360543
Date: Wednesday, February 5, 2003
Time: 10:25 a.m.
Location: Bank One, 12858 N. U.S. Highway 183
Narrative:
The suspect entered the bank, displayed a weapon, and demanded cash. The teller complied, and the suspect fled the scene with an undisclosed amount of cash.
The suspect is described as:
* White male
* 40 to 50-years-old
* Approximately 5'8"
* Approximately 170 pounds
* Medium build
* Gray hair
* Last seen wearing a white shirt, dark sport coat, dark pants, and a mask covering nose and mouth
This case remains under investigation by APD Robbery detectives. Anyone with information is asked to call the Robbery Tip Line at 974-5092 or CrimeStoppers at 472-8477.
This is the 1st bank robbery of 2003.

Welcome to the list You found the right place for Austin scanner listening. In the files section of this group you will find several scanner frequencies.
http://groups.yahoo.com/group/CenTexComm/files/

there are also a bunch of photos: http://photos.groups.yahoo.com/group/CenTexComm/lst

As for digital frequencies Capitol Police 460.075 is digital as is Leander PD

Any antenna beyond the stock scanner antenna would be good. I have seen several @ Fry's Electronics at Mopac/Parmer Ln.

Feel free to ask any questions. We have a great group here.

Also if you haven't already, consider joining www.incidentpage.net to get notified of events. You can even sign up to be a dispatcher to get free access. I'd love to see the new scanner when you get it.

1495. SATURDAY - DOWNTOWN DETOUR Boy Scout Parade

Yahoo group: CenTexComm
Date: 2003-02-07 15:30:19 UTC
From: Robert Barker
Topic: 1495 Message: 1495

From: "Capital Metro Rider Info" <_riderinfo@...>

SATURDAY DOWNTOWN DETOUR
February 8, 2003
Start of service - 12:00 p.m.
Boy Scout Parade
Due to the Boy Scouts Parade on Saturday, February 8, service downtown will be detoured away from Congress Avenue around an area bordered by Brazos in the east, Lavaca in the west, Riverside in the south and 15th Street in the north.
Most Downtown routes will be affected including: 1, 2, 3, 4, 5, 6, 7, 9, 10, 11, 12, 14, 15, 16, 17, 18, 19, 20, 21, 22, 26, 27, 30, 37, 38, 100, Orange Dillo, Silver Dillo
Detour is effective at the start of service, and remains in effect until after the event is over.
For more specific detour information, please check www.capmetro.org or call the GO Line at 474-1200.

Go here to SUBSCRIBE http://www.capmetro.org/riderinfo.html

1496. Amateur Radio Station KD5RUS Announces Catbox Capability...

Yahoo group: CenTexComm
Date: 2003-02-09 04:10:28 UTC
From: M.D. Boyer
Topic: 1496 Message: 1496

Dear Group:

As of February 07, 2003, my budding amateur radio station now has Catbox capability!

By "Catbox" I mean the new Uniden Bearcat BC785D Digital Capable Scanner...

Although the free programming software leaves a lot to be desired, I have managed to program about 50 area police, fire/ems, and air operations frequencies into 3 of 10 banks (using those tags and bank i.d.'s). The Catbox is capable of holding 1,000 frequencies. I haven't even begun to tackle trunking capability...

And APCO project 25 card and tracking is a ways down the road (if ever)...
First I need to get well aquatinted with tracking systems, and then take a look at what I need to do what. I'm not even sure who's using (or going to use) what, and when...
So, once again, all the input I can get is very welcomed.

I'd also be interested in knowing if anyone has used the Uniden eScanner Spectrum Analyzer software. Their eScanner Plus stuff is outta stock online, and the Spectrum is supposed to allow actual scanner control via P.C....

So far, most all of the frequencies I've gathered for weeks in anticipation of getting the Catbox are working. Lotsa life out there on the streets too. But all the frequencies anyone wants to throw at me are also very welcomed.

Heard one dispatcher informing an APD unit today to look out for a "middle eastern-looking individual hauling a 50-gallon drum" of some kind of crap in the back of a pickup...woooohooo!

1501. Keye's Story on the Radio system?

Yahoo group: CenTexComm
Date: 2003-02-11 07:54:33 UTC
From: Robert Barker
Topic: 1501 Message: 1501

My friend called me about a news story Monday night on KEYE about the city's radio system. By the time I turned it on I only got the tail end, where a man was saying something like: "It's silly that the city planned on a $70 million radio system and all we are trying to do give them other alternatives" He was from Tyco.. Does anyone know what's going on?

1502. Trunktracking with a BC245

1503. Setting up a Trunktracker BC245

Yahoo group: CenTexComm
Date: 2003-02-12 12:46:31 UTC
From: Robert Barker
Topic: 1503 Message: 1503

To set up a Trunktracker,you first need to select the bank that you want the trunked system to go into. Now let's say you are going to put in the Williamson County System. You can go to http://www.trunkedradio.net/modules.php?name=TRSDB&sid=78

to see the frequencies for this system.
You push MANUAL to stop the radio from scanning and then you would press and hold the TRUNK button for 2 seconds until it goes into the programming mode. You need to pick the correct system. Since Williamson county is an E2-800 you use the arrow keys to toggle to that and then press enter and then all the banks will flash indicating you need to pick the bank you want to program. When you select a bank (say bank 1) it will automatically go to the first channel in that bank.(I may have that backwards.. it may prompt you for the bank first and then ask you to select a system) you then proceeded to enter the frequencies that are part of this system. (all 16 of them) and I would pay attention to enter them into the same order as they are in the list. You can fill up any remaining channels in this bank that you want scanned with the Trunked System you are programming such as 154.950 intercity or 158.865 Williamson County Volunteer Fire. If you want to have other 800 Mhz frequencies in there that are NOT part of the trunked system then get out of the trunk mode first by pressing trunk. Frequencies such as the NSPAC channels 866.0125, 866.0375. Once you are done you press scan. you may have to press TRUNK and then TRUNK again. Make sure before you press trunk that you see what banks are turned on.. if you only want to deal with bank 1, make sure the other banks are turned off.. then press TRUNK. The radio will then search for a control (buzzing) channel. If it finds the channel It will show dashes on the display. As talkgroups talk It will show you the talkgroup ID. If you do not see dashes or talkgroups and all you see is the normal display is scanning (it will be slow cuz the radio is searching for the control channel) then you are not in range and you may perhaps need a better antenna (Radio Shack or Fry's)
If it appears that the scanner is trying to hear something put it seems to be popping then you may have selected the wrong setting. The most common for Motorola is E2-800, only Water/Wastewater uses the E-1 and specific settings. LCRA uses Ed setting.

Anyway that's a very brief description of how it works. I could certainly walk through it with you on the phone if you needed more help. Unless you really know what you are doing, Do not try to combine systems into one bank.

Today is Wednesday and I'm about to leave for work. I can hear Edward Radio has I35 shut down at Braker Ln. What a mess. I guess some 18 wheeler flipped over again. They are saying they are just directing all traffic off the interstate until Day shift arrives.. I guess they have no intention of opening the road for rush hour. what a mess.

I have been listening to scanners since I was a teenager, but I just
purchased my first trunk tracking radio the other day and am at a
loss as to how to set it up. Does anyone have any "laymens English"
advice on how to get it set up.

1504. Followup to the KEYE news story on Linking Repeaters

Yahoo group: CenTexComm
Date: 2003-02-12 19:08:26 UTC
From: Robert Barker
Topic: 1504 Message: 1504

I called KEYE and they told me about the story they ran the other night. It was a company called Tyco or M/A Comm. They were here in Austin (with a communications trailer parked at the Austin Hilton Inn by Highland Mall) to try and promote a system of software and internet protocol that would allow any agency to link their radio to any other agency's radio. For instance, If there were to be a 3rd car to run off the cliff off Caldwall Lane and they were to once again pool agencies out there. They could use this software to link any repeater to any other repeater. So Travis County SO could set up their Ch 2 153.935 to simulcast AFD's Firecom 6 453.900 which could be linked to one of LCRA's Talk groups which could be linked to Setco's 154.205. You could even have a "communications truck" that could carry the software and a series of mobile repeaters that could link even Simplex channels like 154.950 to these repeaters. This concept is not new and APD and EMS were already doing linking Firecom 3 to the EMS med channel, but they, for instance have no ability to tie say 460.500 from APD to 453.900 from AFD, since it has never been put into the same console. Also say there was a pursuit that originated in Round Rock and went into Austin and along the way, TCSO, DPS, ADAM SECTOR and whoever else who joined in along the way even all they way into Hays Co, could be dialed up by the software and all linked together. So that anything said on one frequency or talkgroup could be heard on the other agency's system also.

They featured this as a possible money saver to the city spending all this money on a new radio system that is supposed to encompass this same idea. However, we all know that no matter how fancy the system is and even if they were to even think of the capacity to link say Animal Control to APD, they will never have it be able to link to Williamson County or Hays County or some other outside agency even such as Secret Service who will be here tonight for Clinton's Speech . So this could work in conjunction with the new system they are getting but I doubt they have plans for it.

From: Daynes Hornsby <hornsby@satx.rr.com>
Topic: 1506 Message: 1506

Took a pocket scanner to the SA Rodeo tonight and found the SBC staff on 466.5125. This appears to be a primary frequency. Some SBC comms also on 468.5625.

Of course, FRS was hopping with the usual "where are you?, I don't see you? you want a drink?..." type of comms. I did not hear anything on the MURS freqs.

I noticed several of the Rodeo staff with radios. There is one guy who is wearing a headset with a boom mic and runs around in the area of the entrance gate for the horses and bulls into the arena. He was doing alot of talking but I could not find him or any other Rodeo staff.

Freqs searched: 150.50 - 174.00; 451.00-470.00 and 902.00-927.00.

Any ideas?

1512. Frequencies still in use?

Yahoo group: CenTexComm
Date: 2003-02-19 03:18:54 UTC
From: Bob Stewart <bobscanfwtx@earthlink.net>
Topic: 1512 Message: 1512

I'm in Fort Worth on the DFWScan list, and I need to know if the frequencies below are still active in the Ausin area. Obviously, I just can't turn on my scanner in Fort Worth and hear them, so I need a little understanding and help. I have done the research. I have used various web sites, have e-mailed one CenTexComm member, read one year of CenTexComm posts, and used frequency lists from CenTexComm members. In the end, though, I just can't tell if they are still active at this time.

I want to know because I want to mail a gift scanner to a beginner in unincorportated Williamson County, about one mile from Leander and Cedar Park. I want to pre-load active frequencies that are near his house, so when he gets it he can turn it on and instantly hear something related to where he lives (WOW! factor). The scanner is a used Uniden BC-148 desktop, which someone gave to me. It has only 20 channels, and receives only 29-54, 137-174, 406-512. It has no 800, trunking, or search feature. I know that it's on the bottom of any list of scanners, but I just cannot afford to buy him a BC-245.

I already confirmed with one very helpful CenTexComm member, that Leander PD is now digital, that Cedar Park has it's own trunked system, and that Cedar Park is also on the Williamson Co TRS. But there still may be some conventional frequencies which are in use. I say that because just today, I learned on CenTexComm, that the Williamson Co VFD talk group is patched to 158.865. So, please tell me if any other of the below frequencies are still active, even if animal control is the only user:

155.79 Cedar Pk PD/Leander PD talk
154.37 " FD dispatch
158.745 " FD
150.805 " FD
154.31 " FD first responder
451.05 " ?

155.355 Leander VFD
158.94 " VFD
460.625 " VFD
153.8675 " ?
154.9725 " ?
155.1075 " ?

154.65 Williamson Co SO
154.725 " SO
154.86 " SO Tac
155.97 " SO

453.2125 " SO
453.9375 " SO
458.025 " EMS
458.075 " EMS
458.125 " EMS
458.175 " EMS
155.625 " EMS

Thanks for your understanding.

155.79 Cedar Pk PD/Leander PD talk Not
154.37 " FD dispatch not
158.745 " FD never heard of this one
150.805 " FD never heard of this one
154.31 " FD first responder not - old Georgetown poss could be
451.05 " ? not this is a utility freq?

155.355 Leander VFD Jonestown VFD Primary.. yes along Hwy 183
158.94 " VFD
460.625 " VFD They say this is now Leander city Utility.
153.8675 " ?
154.9725 " ? not a frequency unless digital
155.1075 " ? must be digital don't even bother putting it in

154.65 Williamson Co SO old ch 5 oldie but a goodie.. I think not
154.725 " SO not
154.86 " SO Tac not
155.97 " SO not
453.2125 " SO poss the jail in Georgetown
453.9375 " SO poss the jail in Georgetown
458.025 " EMS
458.075 " EMS
458.125 " EMS
458.175 " EMS
155.625 " EMS not

Sorry but most all those freqs are dead. For Williamson County you can hear the Volunteer Fire Depts. (Rual areas) on 158.865 and EMS PAGES on 462.975 but the units will talk and go responding on the 800 Mhz system. You can hear the input to STAT air on 467.950 the repeater is in Temple but at least you can hear them in the air on the input.
The only police traffic in Williamson co might be DPS on 154.680 or 159.210 car to car.. or poss 154.950 intercity. Cedar Park is on the Williamson County System. if you don't have 800 Mhz you will regret it big time. If anyone lives in this area, I would like to find the system (I'm sure it's 800 Mhz) that Westside Towing is on .. since they go to Lago Vista a lot and my parents live in Lago.

http://www.ready.gov/readygov_brochure.pdf

http://www.ready.gov/

Terrorists are working to obtain biological, chemical, nuclear and radiological weapons and the threat of an attack is very real. Here at the Department of Homeland Security, throughout the federal government, and at organizations across America we are working hard to strengthen our Nation's security. Whenever possible, we want to stop terrorist attacks before they happen. All Americans should begin a process of learning about potential threats so we are better prepared to react during an attack. While there is no way to predict what will happen, or what your personal circumstances will be, there are simple things you can do now to prepare yourself and your loved ones.

Some of the things you can do to prepare for the unexpected, such as assembling a supply kit and developing a family communications plan, are the same for both a natural or man-made emergency. However, as you will see throughout the pages of www.Ready.gov, there are important differences among potential terrorist threats that will impact the decisions you make and the actions you take. With a little planning and common sense, you can be better prepared for the unexpected.

Thank you Robert, for the great response. I expected almost all
frequencies to be dead, but you don't really know until you ask.

I just found out that the subdivision of the scanner recipient is called Block House Creek, and I verified that responses to his address would be from Williamson Co SO, Williamson Co EMS, and Cedar Park FD.

For clarification:

Question 1. For 155.355, are you saying that this is Leander VFD and Jonestown primary VFD?

Question 2. What is STAT on 467.950 , and what traffic would he hear on this input?

I remember you from the RCMA Journal days, when you did the Texas column. You did call me once about jurisdictions in Edgecliff Village. Also, Brad Carpenter in Watauga died about 6 years ago. I'm sure you remember him.

Thanks for helping me do this thing by remote control. I appreciate your understanding.

(Rual areas) on 158.865 and EMS PAGES on 462.975 but the units will talk and go responding on the 800 Mhz system. You can hear the input to STAT air on 467.950 the repeater is in Temple but at least you can hear them in the air on the input.
> The only police traffic in Williamson co might be DPS on 154.680 or 159.210 car to car.. or poss 154.950 intercity. Cedar Park is on the Williamson County System. if you don't have 800 Mhz you will regret it big time. If anyone lives in this area, I would like to find the system (I'm sure it's 800 Mhz) that Westside Towing is on .. since they go to Lago Vista a lot and my parents live in Lago.

Thank you Robert, for the great response. I expected almost all frequencies to be dead, but you don't really know until you ask.

I just found out that the subdivision of the scanner recipient is called Block House Creek, and I verified that responses to his address would be from Williamson Co SO, Williamson Co EMS, and Cedar Park FD.

For clarification:

Question 1. For 155.355, are you saying that this is Leander VFD and Jonestown primary VFD?

Question 2. What is STAT on 467.950 , and what traffic would he hear on this input?

1521. Hairspray

Yahoo group: CenTexComm
Date: 2003-02-20 05:16:18 UTC
From: Robert Barker
Topic: 1521 Message: 1521

Ok I'm stumped.. APD doing their normal (boring) nightly drug surveillance's on Ch 11 460.375 and tonight they are using the helicopter, Air 1 I presume.. they said something about putting something on the SUV's hood so the pilot can see the car better. They mentioned HAIRSPRAY.. ???? So they went to the store and bought hairspray. Was this a joke .. I know the helicopter has FLIR.. for infrared night vision but how does the hairspray help?? Perhaps it's the glare from their night sun spotlight.

1522. Re: [CenTexComm] Re: Frequencies still in use? In Williamson Co , Cedar Park , Leander

From: Robert Barker
Topic: 1513 Message: 1522

155.355 is Leander Fire only. Jonestown fire (known on the radio as North Shore) is on 159.390 North shore also includes the community of Sandy Creek.

STAT air is the name of an aircraft that is operated or leased by the Scott and White Hospital system out of Temple. Since Scott and White has a lot of facilities in Williamson County, they will come and pickup a a patient. STAT air would be dispatched and talk back to Temple on 462.950. However this is a repeater located in Temple that you would most likely not hear from Blockhouse Creek (Leander, Cedar Park) but you can hear the helicopter talking on the input freq which for UHF is always 5 mhz higher than the repeater output. So if you monitor 467.950 you can hear STAT air talking to their base in Temple when they are close by.

There is a 462.950 here in Austin but it's a different tone so you will still not hear STAT air on the Austin 462.950 unless they come up on the Austin repeater to talk.

I had no idea about Brad Carpenter dying.
Thanks for the update and feel free to write me anytime or post on here.

For clarification:

Question 1. For 155.355, are you saying that this is Leander VFD and Jonestown primary VFD?

Question 2. What is STAT on 467.950 , and what traffic would he hear on this input?

I remember you from the RCMA Journal days, when you did the Texas column. You did call me once about jurisdictions in Edgecliff Village. Also, Brad Carpenter in Watauga died about 6 years ago. I'm sure you remember him.

From: Nicholas McLarty
Topic: 1521 Message: 1530

Some types of material work wonders on lighting you up like a Christmas tree on infrared... the only one I've been familiar with is starch (the clothing type), which is why they're not used on armed forces uniforms in the field... but the more I think about it, starch and hairspray have similar composition so it wouldn't be surprising.

1532. Austin to Leaky Trip

Yahoo group: CenTexComm
Date: 2003-02-23 00:13:34 UTC
From: Frank E Jacks, Jr
Topic: 1532 Message: 1532

I will be traveling from Austin to Leaky (HEB Camp) for an office retreat soon. I'm guessing that my route will probably be Austin to Dripping Springs, to Johnson City, to Fredricksburg, to Kerrville. At that point, I'll probably take the scenic route through Kerrville, Ingram, Hunt, and down through Leaky.
Does anyone have any frequencies or help for me as I get ready to program my Pro-93 scanner?
Thanks,
Frank
NW Austin

This may not be useful information for you guys but in the Houston area, some low band freqs do use PL. We have a couple of low-band repeaters on opposite sides of Harris county that use different PLs. PL has also been noted on at least a couple of simplex channels.
Seems that common PLs for TXDOT are 167.9 and 192.8 Hz.
I've not been able to verify PL tones used anywhere else in the state (for low-band).

1544. Celebrate Texas - Texas Independence Day and Mardi Gras

Yahoo group: CenTexComm
Date: 2003-02-28 14:06:58 UTC
From: Robert Barker
Topic: 1544 Message: 1544
Attachments: 1 described; binary payloads are missing from this source WARC

Several events going on this weekend. Should be some scanner action.

Mardi Gras is officially Tuesday but they will start partying on 6th this weekend.. Last year was when the crowd got out of control and had to be maced and they used the less lethal bean bags on them. Expect some of the same this weekend. The problem with APD on 6th street is that they do not spread out and cover the crowd. They all bunch together on one corner. We counted as many as 18 officers on one corner one night while fights break out 4 blocks away where there are no officers. Expect much of the same this weekend.

Parade @ 10am along Congress Av. APD always uses 460.500 for parades
http://www.celebratetexas.org/
Celebrate Texas -- 2003 Texas Independence Day
Events and ceremonies include:

Saturday March 1

All day: Lone Star State BBQ Cook-Off (at Stone Mountain near Dripping Springs)

8:30 am: Texas 5K Fun Run (begins from 16th and Congress)

10:00 am: Texas Independence Day Celebration Parade (begins at 1st and Congress)

11:30 am: Capitol Celebration hosted by Senator Gonzalo Barrientos. (Celebration includes speeches and musical entertainment)

(Also there is a Texas Independence Day Celebration in the afternoon and evening of March 1 in Luckenbach as well.)

Sunday March 2

2:00 pm: A memorial ceremony at the Texas State Cemetery to honor all Veterans of the Texas Revolution.

7:00 pm: A Gala Celebration and Premier of the Documentary: "Texas Independence", at the Bob Bullock Texas State History Museum (Reservations are required for this event).

1547. 1616 Royal Crest Apartment Fire and the ATF agent.

Yahoo group: CenTexComm
Date: 2003-03-03 12:25:19 UTC
From: Robert Barker
Topic: 1547 Message: 1547

Sunday about 1pm there was a 2 alarm apartment fire at 1616 Royal Crest. I didn't even get to hear it since I was at a restaurant eating at the time. I did go by later to see the damage and was surprised to see and ATF agent at the scene. Is this normal procedure? I had never known ATF to be there.. I say ATF because he was wearing a jumpsuit (coveralls) that said in big letters on the back ATF INVESTIGATOR or something like that.

ATF is occasionally brought in to assist in fire investigations. Their agents have jurisdiction over Federal explosives and arson charges. Because of this, their crime lab is often used to assist local investigations, as are their agents. I remember ATF was brought in to assist on that large condo fire near UT a few years ago.

1550. Free "Preparing For Disaster" Seminar

Yahoo group: CenTexComm
Date: 2003-03-04 14:17:10 UTC
From: Robert Barker
Topic: 1550 Message: 1550
Attachments: 1 described; binary payloads are missing from this source WARC

http://www.ci.austin.tx.us/oem/
Free "Preparing For Disaster" Seminar
Learn how you can prepare for natural and man-made disasters on Saturday, March 8 from 1:00 - 3:00 p.m. Speakers include meterologists Troy Kimmel and Steve Lanore, and representatives from the American Red Cross and City of Austin Office of Emergency Management. This KEYE Safe Family seminar is free to the public. To reserve your seat, please call (512) 832-7549 or e-mail kwqunell@.... The seminar will be held at the University of Texas J.J. Pickle Research Campus, 10100 Burnet Road, in the Commons Center Building #137 (click for a map).

New OEM Volunteer Program Starting

OEM and the citizens of Austin need your help to prepare the community for a disaster! Every volunteer will receive training about disaster preparedness, emergency management, and the hazards we face in Austin. The first training sessions will be held Tuesday evenings starting March 25.

Preparedness is the best defense against disaster losses. Our volunteers will help prepare the community before a disaster by assisting with preparedness activities, speaking to groups, and other educational projects.

During a disaster, communication is crucial. Some volunteers will be needed in the Emergency Operations Center in the middle of a disaster to help answer hotlines or relay information. Others will be needed out in the community, wherever help is requested. For example, providing extra support at an emergency shelter or checking on residents of affected neighborhoods.

After a disaster, OEM may need your help with damage assessments and with making sure everyone gets the assistance they need to recover from the disaster.

Requirements: Must be 18 years or older, attend a personal interview, 20 hours of basic training and submit to a background check at the Austin Police Department. We are asking for 4 hours of volunteer time a month, with the possibility of more during a disaster. Mileage reimbursement and some supplemental insurance provided while on duty. Optional advanced training opportunities will be available.

For more information, e-mail or call Valli Wasp at (512) 370-8863.

The application forms and details are available for download in PDF format below:

a.. Introduction Letter from OEM Director Steve Collier
b.. About the Disaster Ready Austin Volunteer Program

c.. Volunteer Application
d.. Volunteer Core Training Schedule
e.. About the CNCS Grant Funding the Volunteer Program
Note: The files are in PDF format which require the Adobe Acrobat Reader. You can download the reader for free from the Adobe web site.

Mitigation Action Plan Ready for Comment

The Office of Emergency Management has completed the draft Hazard Mitigation Action Plan. It is available for public review and comment in two locations before it is submitted for City Council approval:

a.. Online in PDF format
b.. At our office in City Hall, 124 W. 8th, Room 207.

2003 Austin Home Safe Calendar Ready

OEM's 12th Annual Austin Home Safe Calendar is available for distribution from our office. Please call (512) 370-8800 to request a copy, or stop by our office in City Hall. Each month contains community calendar events and preparedness tips. The calendar is produced by OEM through the generous support of corporate and departmental partnerships.

1552. Williamson County Talk Groups

Yahoo group: CenTexComm
Date: 2003-03-12 04:55:51 UTC
From: George Joos
Topic: 26 Message: 1552

Finally had some quiet time so I was able to update my list of active talk groups for the Williamson County TRS. It is located in the Files area inside the Williamson Cnty Folder. I only included groups that I was pretty confident on the names. Any talkgroup in my trunker database that I had not seen used in 2002/2003 is not included in this list.

Lindsay - I submitted the updates on trunkedradio.net tonight.

Enjoy,

George

APD News Release
FOR IMMEDIATE RELEASE
March 11, 2003
Contact: Public Information Office, 974-5017
BANK ROBBERY
Case: 03-0700625
Time: 11:31 a.m.
Date: Tuesday, March 11, 2003
Location: Bank of Texas, 1005 Congress Avenue
Narrative: The suspect entered the bank in Downtown Austin and displayed a threatening note demanding cash. A weapon was not displayed. The teller complied, and the suspect fled the scene on foot with an undisclosed amount of cash.
The suspect is described as:
* White male
* Early 20s
* 5'6"
* Thin build
* Shaved head with light brown hair
* Unshaven face
* Wearing a multi-colored hooded jacket, mostly blue.
This case remains under investigation by APD Robbery detectives. Anyone with information is asked to call the Robbery Tip Line at 974-5092 or Crime Stoppers at 472-8477.
This is the 3rd bank robbery of 2003.

Strong Signals - Radio NewsI have not been following the thread on this one but apparently if you read this.. you should
** NOT ** rush out to get the new Trunktrackers that have just been released.. the ones that require a seperate digial card to be purchased since this one unit will supposedly do all of that and even follow the 9600 baud systems which is what The City of Austin and Travis County will be using. If anyone knows more about this radio, please let us know. If anyone has one of the new radios with the digial card, I'd like to know what they are hearing on the new City/County system. Any voice traffic at all? I'm being told that Motorola reps are testing the system and have been for awhile now. Just this last weekend they were testing it along the hike & bike trail on Town lake. Looking for dead spots and such. Can you hear me now ?? Can you hear me now ??

RS/GRE Digital Scanner In Works!
Posted on 01/25/2003 14:38 EST

We recently received the following information and after talking to the program manager of the project to help ascertain its credibility, we offer the following for your enjoyment:
I work with a team of engineers who is assisting Radio Shack and GRE with the development of Radio Shack's first digital trunked scanning receiver. We are very excited about this radio and thought your readers might be interested in knowing a little bit about it.
The user interface and receiver are built around the very successful PRO-93/95 radios, with some significant enhancements:

a.. The radio has 500 channels in 10 banks of 50 each
b.. There are 150 trunked IDs per bank, in 5 ID sub banks of 30 each
c.. Users can perform "open mode lockout" - lock out undesired new or existing IDs while in open mode, a great tool for catching new talkgroups!
d.. It is now possible to perform manual ID hold without waiting for the talkgroup to become active
e.. The radio will track UHF and 800 MHz Project 25 9600 BPS Control Channel systems!
f.. The radio will track all Motorola 800 MHz splinter system types
g.. Users can now edit the Welcome screen, just like the PRO-92
h.. Full FIPS/SAME NOAA weather radio capability, with 10 FIPS code slots
i.. A new FRS/GMRS/MURS search range
j.. A temperature controlled crystal oscillator (TCXO) is used to ensure frequency stability at all temperature ranges - very important for digital!
k.. There is a revolutionary, patented scanner memory management system - you'll have to wait for details but trust me, it will be a very popular feature!
l.. There are some control channel analysis tools that users will find very beneficial, again, you'll have to wait for full details!
m.. The radio will be a handheld scanner similar in size to a PRO-93 or PRO-92

One of the most exciting things about this radio is the digital DSP decoder system!
a.. The radio is fully digital ready - there are no add on cards to purchase
b.. The radio will decode any digital system that is compliant with Project 25 Phase 1 - essentially this means no VSELP, but all ASTRO IMBE and P25 digital modulation types are supported
c.. There is a really cool DSP feature that I can't give details on just yet - but you will know it when you see it in the manual!
d.. No special quality settings are needed for different digital system types - you can scan different systems in the same or different bands simultaneously without changing digital quality settings
e.. The cost is expected to be in the $499 range, and the radio is expected in stores around November 2003.
So there you have it. Sounds like quite the revolutionary product and a new direction in scanner design! It sure looks like Uniden won't be the only game in town for long and it will hopefully breath some life into RadioShack's lean scanner product line.
We thank the gentlemen working on this project for sharing this news scoop with us and hope to hear more about this product in the near future!

Subject: CRITICAL AIR MEDICINE - Non-injury incident

DATE 3/6/03

PROGRAM CRITICAL AIR MEDICINE

VENDOR Own Part 135

ADDRESS
4141 Kearney Villa Rd
San Diego, CA 92123

WEATHER Clear. Not a factor

AIRCRAFT_TYPE Bell 206 L3

TAIL# N793CA

TEAM Pilot, Nurse, Medic. No injuries reported. No
patient.

DESCRIPTION Enroute from base at Marble Falls to LLano County
Airport to pick up a cardiac patient, aircraft
experience and undetermined tail rotor
malfunction, forcing pilot to institute emergency
landing procedures. Pilot's actions included
slowing engine to flight idle and maneuvering
aircraft through a series of turns and
autorotation in order to set own in a field where
a hard landing ensued. Once on ground crewmembers
intitiated emergency safety and evacuation
procedures and completely shut down aircraft. CAM
dispatch was notified of position and safety of
crew. CAM Dispatch notified appropriate local
authorities, area secured.

ADDITIONAL INFO NTSB still has the aircraft. The tail was severed
by the main rotor blades

1558. Found on the Austin EMS Association bulletin board

Yahoo group: CenTexComm
Date: 2003-03-16 06:57:20 UTC
From: ExLngHrn@aol.com
Topic: 1558 Message: 1558

This was posted in the public section of the Austin Travis County EMS Employees' Association bulletin board...

-Wes

Ok Gang... Let's see if we can knock some of these items out... Or I'll at least try to answer all of the questions that I can..

1) Trunked Radio -- We are installing a Motorla Trunked radio system. For you techie types, it is a Smartzone 6.1 (APCO Project 25 compliant system) system. We will have 2 simulcast layers, 1 that is Countywide, and 1 that is east of of 620.
EMS will function on the countywide layer. This particular layer will have 11 radio towers and be capable of supporting 23 simultaneous trunked conversations.
The City wide layer has 7 towers and will support 19 simultaneous trunked conversations.
There will also be a few individual tower sites called intellirepeaters for difficult coverage areas. Some example of these are Barton Creek and Hamilton Pool type locations. There are some technical limitations with these smaller towers that we are still evaluating in respect to their operational usage.

The radio system is currently undergoing coverage testing and is scheduled for field usage starting May 27th. The initial users of the system will be A/TCEMS, TCSO Patrol, and Water/Wastewater. These users will be participating in what is known as Operational Burn-in. The system must function for 60 days without any "glitches" before we will accept it from Motorola. At the end of a successful 60 day burn-in, other agencies will begin moving onto the system per their individual schedules.

The Austin Fire Department is currently looking at Jan of 04 and I'm not sure when APD will be coming on.

2) Williamson County EMS interoperability -- We are looking at how to enable the ability for WCEMS and ATCEMS to talk together. Austin radios are capable of talking on the WC system, but WC's current radios are not capable of working on Austin's (because of the newer technology). So we are exploring different ways of enabling this, and will have some options. The biggest challenge in this though, is knowing when we are both running on the same call. over 50% of the time, we don't know it until we respectully arrive on scene and see the other agency. So suggestions for how to manage this are welcome. Regretfully, we aren't on the same CAD system, which would be wonderful.

3) New Communications Center -- We are scheduled to take possession of the new comm center from the General Contractor at the end of March. There are then a few months of system installation and then a heavy training period for

comm staff. We will be changing over to a new CAD system, new 9-1-1 system, new radio system, as well as a new home; so this will be a very trying time for the communications staff. The cutover date for the new comm center is October 12th.

Further updates as I get them entered or as questions generate...

Greg

From: Aaron Slaughter
Topic: 1559 Message: 1559

Lockhart Fire / Rescue is hosting Basic and Advanced Skywarn spotter Training on Tuesday, March 25, 2003 from 18:00 to 21:30 hrs at the Lockhart City Hall; Glosserman Room 308 W. San Antonio. Topics covered will be Flooding and Flash Flooding, Tornado and Severe Weather Indications, Safety Rules in Flooding and Severe Weather, and The Meteorology of Severe Weather. For more information, Contact Aaron Slaughter at 512-398-2321 or 512-738-0843

1560. War and Protestors and stuff

Yahoo group: CenTexComm
Date: 2003-03-20 20:46:17 UTC
From: Robert Barker
Topic: 1560 Message: 1560

I'm getting requests for frequencies to monitor for this week:

155.580 UT police Primary for protests usually at noon @ the main building
155.820 UT police Ch 2

460.500 APD Ch 8 Info 1 Tac
460.025 APD Ch 7 Car to Car Info 2
460.475 is now George Sector (Downtown) where most protests will occur.
Air 1 and STARflight will talk to police on the above channels or on
whatever sector they are working in. Air 1 is constantly flying around with
their spotlight on. If you see them in your area, just check that sector's
frequency or the above two tac channels to see if they are on those. Most
likey they are just goofing around.

453.2375 Downtown Rangers has been very active since SXSW
453.3375 Dowtown Rangers Ch 2?? Not sure about this one.

155.445 DPS Capitol, for State Buildings except the Capitol
460.075 Capitol Police Digital; They may be in the clear if their digital
quits working.. This is for the
460.125 Capitol Police and usually in the clear.
158.730 Governor's Detail (DPS Executive Security) can be digital. Unit
3 Governor Rick Perry, 333 his wife, 3A, 3B kids
415.200 GSA - federal Courthouse

149.625 Camp Mabry Security

460.050 ABIA Airport Police
460.200 ABIA Airport Security (not the police)
TSA - Transportation Security Administration reported in other cities on
172.900 169.300 or 172.150 ??? can anyone confirm this ???

Can anyone think of any others.
There is another anti-war protest scheduled for 4:30 pm today Probably
downtown to block streets and possibly even the Congress Av Bridge over Town
Lake.

1564. Leander PD - APCO-25 DES/OFB

Yahoo group: CenTexComm
Date: 2003-03-23 23:44:49 UTC
From: Lindsay C. Blanton
Topic: 1564 Message: 1564

Hi Folks,

Spent the weekend in Williamson County visiting some family.

It appears that Leander PD is Encrypted APCO-25 DES/OFB. They were
using the following frequency.

156.1575 Leander PD CH-1 - APCO-25 DES/OFB

It is unfortunate that such a small agency would totally encrypt their
communications, but they are doing just that! Both local listeners and
other local public safety agencies will have no way to monitor an
important local agency. Don't go out and get an APCO-25 scanner or
radio to monitor them, you won't be able to.

1568. Update on City of Austin, TX system regarding the MDT"s

Yahoo group: CenTexComm
Date: 2003-03-27 05:29:01 UTC
From: Robert Barker
Topic: 1568 Message: 1568

I got a call last night from a friend who told me that when the City of Austin and Travis Co go over to the new Digital Motorola system, they will be using the LCRA 900 Mhz system to process all MDT traffic. I'm not sure what all this means and how it will break down..but it sounds like every single vehicle that has both an MDT and a radio will have two trunked radios in it. Talk about $$$$$$$$$$$$$$$$

They are using regular conventional 800 Freqs now for MDT traffic so I don't understand why the need to go trunked. Apparently LCRA might have been the low bidder and it's cheaper to do that than to maintain their own repeaters. I was told they can't do it on their own 800 Mhz Digital systems because it will not support MDT traffic.

Can anyone shed more light on this??

1569. It's a AFD Thing

Yahoo group: CenTexComm
Date: 2003-03-27 06:37:20 UTC
From: Michael
Topic: 1569 Message: 1569

I found out some stuff that AFD is going to due with thier FFs and
the new Trucks

#1 Quint and Squad Location Decisions
Approved by the Fire Chief

Quints will be placed at stations 19, 27, 38, and 40
Squads will replace E50, E4, E9,
Quint required staffing will be Capt., FS, FF, FF
Squad required staffing will be Lt. and FS
L1 and E1 required staffing becomes 4 per company

Hyde Park Neighborhood Association understands the City's severe
budget constraints, and they have no strong objections at this
point. (STATION 9's territory)
(this group rallied against the closing of station 9 in the past)

#2 New Quints: Q19, Q40
Old Quints:(wich will be replace with the new Pierces) Q27, Q38
New Squads: S4, S9, S18, S40
Certified FF positons lost: 27

#3 Squad 18 is going to move in with the medics at ATCEMS Sta.14 in
18's territory, not at Fire station 18 . Not to sure where ATCEMS DC
3 will be housed .
That's all I know for right now when I find out more I will let
ya'll know

In Harris County and Pasadena, they run their MDTs on conventional. 2-way is on trunk.

1572. RE: [CenTexComm] Update on City of Austin, TX system regarding the MDT"s

Yahoo group: CenTexComm
Date: 2003-03-28 13:51:45 UTC
From: Lindsay C. Blanton
Topic: 1568 Message: 1572

On EDACS systems, data communications work pretty well. Data is transmitted on the unused voice repeaters on the network - so there is less bandwidth requirements for the overall system.

The LCRA is really starting to sell 2-way communications as a commodity here in South Texas. There are quite a few users, including public safety, on the system now.

1590. Capitol 10 K race radio

Yahoo group: CenTexComm
Date: 2003-03-30 15:17:33 UTC
From: Robert Barker
Topic: 1590 Message: 1590

I'm hearing the Cap 10K race.. on this system .. it is the same system that KEYE is on

According to the FCC data base: the system should be:
452.475 452.675 452.775 452.800 452.825 452.875

I'm listening now. primary is 452.675 (primary)

They just came up on that channel and asked about a runner who needs a golfcart cuz he doesn't want to run anymore. .they told him to go to the race channel.. he said ok.. and he came up on the same frequency (probably a different talkgroup in his radio) and he was talking on the other channel. This is definitely a trunked system or whatever.. It's not just KEYE ..these are the race people.

1591. S & P communications systems covers KEYE news and possible Metro Ambulance

Yahoo group: CenTexComm
Date: 2003-03-30 16:05:50 UTC
From: Robert Barker
Topic: 1591 Message: 1591

I'm hearing the Cap 10K race.. on this system .. it is the same system that
KEYE is on

Lindsay said it was already listed in the database:

http://www.trunkedradio.net/modules.php?name=TRSDB&sid=829

According to the FCC data base: the Austin Tower should be:
452.475 452.675 452.775 452.800 452.825 452.875

I'm listening now. primary is 452.675 (primary)
secondary seems to be 452.875

Please if ANYone can monitor this system we need more info on the talkgroups etc, I know KEYE TV news crews are on this system along with possibly a private ambulance service (METRO) that may also be in Austin.

1592. 452.550 AAA Auto Club Triple A Simulcast in Austin and in Houston

Yahoo group: CenTexComm
Date: 2003-03-31 04:26:09 UTC
From: Robert Barker
Topic: 1592 Message: 1592

Does anyone know why Triple A (AAA) Auto club .. frequency on 452.550 transmits the same signal in Houston as they do in Austin. If you listen to the dispatcher.. She is giving out streets in Houston and every once in awhile she will have a dispatch in Austin and you will hear the mobiles talking on the same frequency.

1593. Helicopter Pilot needed for STARflight program

Yahoo group: CenTexComm
Date: 2003-04-03 20:52:59 UTC
From: Robert Barker
Topic: 1593 Message: 1593

Helicopter Pilot
Position Title Code
3298-3-20327-47-0005
Essential Job Functions
Responsible for operating Austin/Travis County Emergency Services helicopters in support of emergency medical, law enforcement, fire suppression, rescue, and other emergency and non-emergency missions as directed by the Austin/Travis County Commissioners Court, the STAR Flight Program Manager and the Austin/Travis County Director of Aviation Operations. Pilots ATCES helicopters in accordance with all applicable federal, state and local rules and regulations, including the Austin/Travis County EMS Operations Manual. Operates and navigates helicopters under day/night VFR conditions to improved and unimproved local and non-local landing sites. Assures air worthiness of assigned helicopters by examining pertinent maintenance logs/records and by performing required inspections in accordance with the Federal Aviation Regulations, the ATCES Operations Manual and the appropriate manufacture's rotorcraft flight manuals. Coordinates unscheduled maintenance requirements with ATCEMS maintenance personnel. Operates emergency communications equipment. Performs other tasks as assigned by the ATCES Chief Pilot.

Qualification Requirements
A high school diploma or equivalent. A FAA Commercial Pilot certificate with a Rotorcraft, Helicopter category and Instrument Helicopter class rating. A current FAA Second Class medical certificate. Total logged flight time of at least 3,000 hours, 1500 of which must be as pilot in command of a helicopter, and 500 of which must be cross-country and 100 of which must be night unaided.

Preferred: Type ratings in the EC135 preferred.

Hours: Works some holiday, nights, and weekends. Availability to work a rotating shift consisting of 12 hour day and night shifts.

Work site: Brackenridge Hospital

BACKGROUND CHECK REQUIRED

PHYSICAL & PSYCHOLOGICAL EXAM REQUIRED

DRUG & ALCOHOL TEST REQUIRED

Salary
$3830.67-$4789.20 Monthly. Commensurate with experience

Department
Emergency Services

Deadline
Until Filled

1594. Star of Texas Rodeo Frequencies for 2003 and Pflugerville ISD

Yahoo group: CenTexComm

From: Robert Barker
Topic: 1594 Message: 1594

461.500
461.7125 ?
462.8375
464.500 Security and Medical (repeater)
464.550
469.550
466.9875 Parking
467.8625 lots of hollaring; possibly maintenance
154.570
154.600 camera crews.. this freq was on all the time.. like an IFB during the rodeo and concert
154.670 ? I'm not sure since I was on 154.680 (DPS mobile) nad it was bleeding over..

APD doing security as overtime assignment.

Does anyone have anything on Pflugerville ISD.. security, busses, High school radios??

I was down in San Marcos for a tanker trailer that was
hanging from a bridge on the river. I heard these
frequencies:
NEXTEL- hays county is using them along with the LCRA
system.
159.045 Hays county fire
154.055 ??? need you up on the 5th floor
153.875 ??? control burn
153.025 ??? sounded like a school, but mentioned some
dorms. spoke about a main gate. used 10 codes. Does
anyone have an idea about these frequencies.

Fry's advertised 5 Channel MURS radios in today's Statesman. I assume these are the 5 freqs:

151.8200 (MURS Channel 1);
151.8800 (MURS Channel 2);
151.9400 (MURS Channel 3);
154.5700 (MURS Channel 4/BLUE Dot);
154.6000 (MURS Channel 5/GREEN Dot);

2 radios are $49.99
2 watts ("5 mile range") yeah right
38 sub codes (PL tones)
10 NOAA channels
NO FCC license required

Expect to hear more traffic on these frequencies picking up if the radios are that easy to get.

1. Ok, the tones on the EMS/FIRE pages are different, so what do they mean exactly? Does each fire engine and ambulance have its own tone? Haven't quite figired it out yet.

2. How would one scan the frequencies of the little handheld 2 way radios?

It depends on the city or county. Some tones are station specific, and others are for the whole department. If you want to listen in on the radio traffic, you need to get a scanner and go to radio shack and buy a frequency guide called Police Call

radios?

yes the tones are activating their voice pagers.. and each unit will have a different voice pagers. If you listen that much you might begin to recognize some of the unit's tones.. I know Medic 9 and Hudson Bend are odd.

Not sure what you mean by the little handheld radios but I'm gonna guess you are referring to the FRS radios that are very popular now. The FRS can be 14 channels:

462.5625 MHz FRS 1
462.5875 MHz FRS 2
462.6125 MHz FRS 3
462.6375 MHz FRS 4
462.6625 MHz FRS 5
462.6875 MHz FRS 6
462.7125 MHz FRS 7

467.5625 MHz FRS 8
467.5875 MHz FRS 9
467.6125 MHz FRS 10
467.6375 MHz FRS 11
467.6625 MHz FRS 12
467.6875 MHz FRS 13
467.7125 MHz FRS 14

\

Yes DOS means Dead on Scene.. and is common for EMS to say that if the person is DOS.

when a unit is told to "stage" it means that the scene is not secure and not safe for them to enter.. They are then (supposedly) cleared to enter once the scene is secure.. however.... this is where the major communication breakdown occurs.....and i'm frankly surprised that it hasn't gotten any of the EMS guys shot.. APD will all the time arrive at the call and then clear the call without even notifying EMS. and EMS will sit there for like 20 mins totally clueless.. why.. cuz they are on a different radio frequency.. they have no clue as to what is going on with the police at the scene. Most have the capability to monitor the APD channel but they don't or dont' want to learn. They could come up on the APD channel and ask the dispatcher if it's ok to enter but then APD has a cow about it.. and that's why the agencies do not get along. Every scene needs a scene channel. or they need to agree where EMS is responding with PD they need to be able to talk to each other on some talkgroup somewhere. Same with Animal Control, City Utilities, water/wastewater,

Today April 15th, IRS taxes are due and should be activity on 409.025. The main IRS office is at I35 and Ben White with another office @ I-35 and Rundberg.

The adjacent building @ I-35 and Ben White is the Veteran's Administration and should be on 164.175. Let me know if anyone confirms this for sure. I'm pretty sure it is correct.

From: etlaesium
Topic: 1615 Message: 1617

These 10 freq's which are half of what each assignment include are used for land/mobile communications on a Nationwide or other regional system. Plans for construction of such system must meet a deadline of ten years until completion for the aplication to be granted.

United Telecomm will probably resell the ability to use the freq's or use them for themselves as service crew freq's.

This band also has a Public safety allocation which they are not using. I believe the thought would be for Emergency Management Authorities to have repeaters set up in such a way that a response in any area of the United States would have contiguous radio communications (for example, the Space Shuttle breakup, FEMA notifications, etc.).

From: David Litsinger
Topic: 1619 Message: 1620

Ah, well, according to the 10pm news, all we had was the back up of traffic, all the activity was way to the north, temple and salado, somebody with a possible bomb.

1621. Re: [CenTexComm] Downtown activity I35 Shutdown?? NOT

Yahoo group: CenTexComm

From: Robert Barker
Topic: 1621 Message: 1621

I never got any AWACS pages or anything about I35 being shut down... The only thing about I 35 was about noon on Saturday a section of road opened up and they had to block off a lane and then there was the normal collision south on I35 around Ben White where the lanes narrow down to nothing.. and they have wrecks every day there.

Happy Easter Everybody.

Robert Barker
ASA 004 - on www.incidentpage.net

Should be lots of LCRA Ranger Traffic today on the LCRA system.

From: texthinker@aol.com
Topic: 1619 Message: 1622

The activity was indeed in Temple/Salado. Apparently a vehicle with a "explosive" device was at the mall, and led police on a chase from Temple to South of Salado. The vehicle crashed, and not knowing what explosives were in the vehicle the Interstate was shut down.
Heard about this when a friend who works at the mall called asked if I heard anything. I was out and about without my scanner, so no.
Was planning on taking a scanner to the POW arrival ceremony at Hood last night too, but didn't have a chance to run home and get it before they arrived.

Hey Robert...

IH-35 NB was indeed shut down on Saturday night/Sunday morning. Just after the merge (around 51st St and Airport) there was an 8 car pile-up with two extrications. The roadway was very slick and I believe that was the cause of the accident, though my word is not final. It felt like I was walking on black ice up there.

I'm not sure if that is what you were referring to, but that was the last time that I know of that IH-35 was closed.

-Mike

1627. Search in progress on WIlliamson County Trunk System

Yahoo group: CenTexComm
Date: 2003-04-29 03:58:51 UTC
From: George Joos
Topic: 1627 Message: 1627

Williamson County is currently coordinating a search for what sounds like a missing male subject (possible a kid) and a dog. Somewheres off county rd 353(?) at a park, possibly Tehas Park?

They currently have the following groups patched together:
Sheriff TAC1 (3568)
County Helo 1 (4592)
PS1 (4944)
Constable TAC1 (3184)
PS2 (4976)
Fire/EMS Link (5008)

So far I have heard Sheriff units, Constable, DPS, Starflight (they just went back to get more fuel), and Georgetown PD & Fire. Liberty Hill Fire Rescue is also there, but they must be working off their vhf. DPS is launching their helicopter, and Blackhawks have been requested from the Army.

George

Just heard the DPS troopers enroute to get the chopper give the search area as north end of Lake Georgetown by FM3405, Tejas Park??? I can not find the park on my maps at home.

George

I'm listening to the search.. they have STARflight and DPS chopper in route with a FLIR. I also just paged it on www.incidentpage.net
all I know is that Lake Georgetown has a lot of little park areas.. and this is probably that area.

1631. Uniden Scanner Presentation has been moved to tonight

Yahoo group: CenTexComm
Date: 2003-05-06 21:38:07 UTC
From: Robert Barker
Topic: 1631 Message: 1631

I just got a page that they have moved up the Bearcat/Uniden presentation to tonight's ham meeting taking place at the Sirloin Stockade @ N Lamar and FM 2222 across from DPS.

sorry about the late notice but I will try and be there. They will talk about their line of trunked scanners that will intercept the new city and county radio system so it should be good.

I know the food is nasty but perhaps a $1 off coupon would help. http://www.ssbuffet.com/navbar_2.htm

you don't have to eat there.. and usually the meeting will start at 7pm with the presentation about 30 mins afterwards.

1634. Uniden/Bearcat Scanner used to decode Trunked Digital Radio

Yahoo group: CenTexComm
Date: 2003-05-07 13:29:58 UTC
From: Robert Barker
Topic: 1634 Message: 1634

Ok this is the latest info I have:

I attended a recent presentation from Randy Brewer of Lesco
http://www.lescodistributing.com/ at the Austin Amateur Radio Club meeting
on 5/6/03.

Randy made several statements that are not correct. The scanners that are
currently for sale: The Uniden BC785D (mobile) and the BC250D (handheld)
are NOT capable of decoding the newest: APCO 25 Digital Trunking
Technology, which is the Motorola 9600 baud rate digital system that
the City of Austin and Travis County will be phasing in over the next few
months. The above scanners will trunktrack "some" digital systems that are
3600 baud rate, using the optional digital card but they will NOT trunktrack
digital trunking above 3600 baud. The new Austin system is supposed to be
at 9600 baud.

That system is currently being used AT THIS TIME for testing. I was hoping
to see a WORKING scanner tuned to the frequencies and decoding at least the
control channel but he did not have it programmed. I just wanted to
caution anyone from buying this equipment thinking that it will work for the
new Austin system.

Right now, there is no scanner/radio that will decode and track this 9600
digital trunking technology. There is a rumor that Radio Shack will sell
their version of the above radios (sometimes referred to as the phase III -
Trunktrackers) that will not require the optional digital card (it will be
built in) and they will decode the 9600 baud systems. Rumors that this will
occur have been taking place at
www.strongsignals.net
http://www.strongsignals.net/access/news/news.cgi?type=single§ion=radio&
entry=987

Randy kept saying that both Dallas, TX and Houston, TX are now 80% digital.
That is incorrect. Houston Police, Fire & EMS and Dallas Police, Fire & EMS
are still analog using 460 and 453 Mhz. None of these agencies are even
using 800 or 900 Mhz for primary dispatch communications. The City of San
Antonio does use Motorola 800 Mhz trunking but it is not a digital system
either.

There is also a good link about updated info on the Austin System at:
http://www.trunkedradio.net/modules.php?name=TRSDB&sid=2
including notes, frequencies and a map.

I have nothing against Lesco at all and in fact, would love to buy from them
if they offer the newer technology 9600 baud Trunktrackers. I just wanted
to caution anyone from jumping out there and ordering these radios without
knowing the facts.

If I have stated anything incorrect, please, by all means let me know. Otherwise, feel free to pass this information on to anyone whom it might benefit.

Thanks,
Robert Barker, N5RAQ, IPN-ASA004

1635. Response from Scott Carpenter at Uniden Corporation in Fort Worth regarding the scanners.

Yahoo group: CenTexComm
Date: 2003-05-08 04:00:23 UTC
From: Robert Barker
Topic: 1635 Message: 1635

From: "Carpenter, Scott"
Date: 5/7/03
To: "'Robert Barker'" <rbarker@...>

Robert,

The BC250D/BC785D/BCi25D are capable of monitoring and tracking the control channel of APCO 25 systems operating at 3600 baud.

The BC250D/BC785D/BCi25D is unable to follow the 9600 Baud Control Channel, however, it can monitor the APCO 25 voice communications on the voice frequencies, but is unable to follow the conversation when the control channel switches the talk group to a new frequency. Thus, they do not provide a good solution for monitoring APCO 25 systems operating at 9600 baud, such as Austin's system.

Uniden will have new scanners available in the fourth quarter of this year that will be able to monitor 9600 baud communications.

Respectfully,

Scott
scarpenter@...

What he is saying is that the newest scanners that are currently available will allow you to hear digital communications just like a non Trunktracker can hear trunking systems now.. However.. the radios will not FOLLOW the conversations from frequency to frequency as they trunk.

Thanks, Robert, for the info on the Caldwell County system.
I see on Lindsay's site that the system is APCO 25 3600 baud, but it is an analog system for the most part.
Does anyone know whether an APCO analog system can be monitored on a trunktracking PRO-93 scanner? And if so, what type of system do I tell the scanner that I'm listening to? I assume I tell it Motorolla, but do I tell it type I or type II? And if it's type II, what would the fleet maps be?
Thanks - this APCO stuff is all new to me.

1642. IMMEDIATE RADIO COMMUNICATIONS INTEROPERABILITY PLAN

Yahoo group: CenTexComm
Date: 2003-05-14 12:39:36 UTC
From: Robert Barker
Topic: 1642 Message: 1642

This is the official link:
http://www.texasfirechiefs.org/friday/iiplan.doc
IMMEDIATE RADIO COMMUNICATIONS

INTEROPERABILITY PLAN

The primary purpose of this plan is to facilitate immediate interoperable communications between public safety entities operating in the state of Texas. This plan is designed around Very High Frequency (VHF) high-band analog radio equipment that is utilized by most state agencies and many other local and federal public safety entities. The members of the IRWG have agreed to utilize the Project 25 standard for future purchases that require digital applications for mission critical public safety personnel. The IRWG has identified specific analog VHF frequencies to be utilized by First Responders for interagency communications that make up this immediate plan.

Frequency Current Name
Interoperable Name
154.950 RX / TX Intercity Mobile or Car-to-Car
Texas Law 1

155.370 RX / 154.950 TX Intercity Mobile-to-Base
Texas Law 2

155.475 RX / TX National Law Enforcement
Texas Law 3

Interoperability Channel

154.280 RX / TX Fire Mutual Aid ?A?
Texas Fire 1

154.265 RX / TX Fire Mutual Aid ?B?
Texas Fire 2

154.295 RX / TX Fire Mutual Aid ?C?
Texas Fire 3

155.340 RX / TX Hospital EMS Radio Network
Texas Medical 1

151.385 RX / TX Air-to-Ground *
Texas Air 2

* Texas Air 1 is reserved and not available for use in
this plan
Texas Law 2 has been designated as the primary calling channel for

interoperable communications between mobile units and a law enforcement/public safety base radio.....It is imperative that law enforcement/public safety base stations continually monitor the Texas Law 2 channel.

From: Davidlitsinger@aol.com
Topic: 1644 Message: 1644

Ah, well, working on the paperwork to get me retired and out of the Post Office once and for all. If anyone knows of any good job openings SE Travis Co (Del Valle area), give me a shout.
Now, it seems as if the bearcat's are trunking capability, or with the digital card, can scan the digital, but not trucking. Perhaps I should get the model with the digital chip (WOW, lots of extra $$$), and just rely on plugging in the frequencies and catch what I can, but then I wont have the truning needed for LCRA systems. I guess this means, if I can actually scrape up the money, I may have to buy TWO new scanners!! decisions, decisions, decisions.

Dave.

1645. to buy or not to buy a new Trucktracker....

Yahoo group: CenTexComm

1648. South Texas Dispatcher Suspended

Yahoo group: CenTexComm
Date: 2003-05-18 23:10:04 UTC
From: Lindsay C. Blanton
Topic: 1648 Message: 1648

A CNN report:

South Texas police dispatcher has been suspended with pay while investigators determine if she mishandled a call on an 18-wheeler with 70 to 100 illegal immigrants packed in its trailer.

Seventeen of those immigrants were found dead when the truck's trailer was discovered abandoned early Wednesday at a truck stop just south of Victoria. Two more of the immigrants died later.

Deputies found 17 bodies inside and two more died later. Initial autopsy reports showed the victims died from dehydration and suffocation.

Two hours before, the Kingsville Police Department received a telephone call to alert them that someone appeared to be waving for help from the tractor-trailer rig, the Fort Worth Star-Telegram reported.

Shortly before midnight Tuesday, a Kingsville man was driving north on U.S. 77 toward Bishop when he saw a semi-trailer that appeared to have a dangling taillight. On closer inspection, he saw that a hand holding a bandanna was sticking from a hole near the taillight, waving in front of the light.

The motorist noticed that it was a white tractor-trailer with New York plates. He turned around and headed home to call police to report what he had seen, the newspaper reported.

When the man hung up, the dispatcher should have alerted police in Bishop but didn't, Kingsville Police Chief Sam Granato told the newspaper.

The dispatcher is on paid leave while city officials "look into the matter," said Kingsville City Attorney Courtney Alvarez.

Officials have described at least three cellular-phone calls apparently made from the back of the tractor-trailer, first to police in Kingsville and a few minutes later to police in Corpus Christi.

A key reason police were unable to help is that not all the cell phone service providers in the Coastal Bend area have equipment that allows 911 operators to trace cell phone numbers or locate someone on a cell phone, said Corpus Christi police Cmdr. Brian Uhler told the newspaper.

From: Frank E Jacks, Jr
Topic: 1649 Message: 1649

OK, I just got back from Palmetto State Park.
Thanks to everyone who helped me out with
the frequencies for the counties and the park.

Now I have a question about Caldwell County's
Astro system. I programed in the frequencies as
a Motorola Type 2 system into my Pro-93. I plugged
in the talkgroups from trunkedradio.net. And it all
worked like a charm.

I don't understand why, if this was an Astro 3600
baud system, why was I able to hear everything?
1) Was it because they are not using the system
as a digital system but using it as a conventional
system? And if so, why would they do this?
2) If everything else remained as it is, but they were
at 9600 baud, would I still have been able to
hear everything?

From: Frank E Jacks, Jr
Topic: 1649 Message: 1650

So, could the new Austin 9600 baud system be
operated in analog mode (even though it's a
digital system) if they were so inclined?
And, if it was, would we be able to listen in but
just not track it?

> I don't understand why, if this was an Astro 3600
> baud system, why was I able to hear everything?

3600 baud systems can be operated in analog mode.

> 1) Was it because they are not using the system
> as a digital system but using it as a conventional
> system? And if so, why would they do this?

Digital either works or it doesn't. I ca sen y u a mes ag like th s
an y can still understand it. Well, when analog cuts out the listener
can still make out the conversation. With digital it's all or none.
Could be they were having problems using digital. Or they can't afford
digital portables for everyone. Or maybe they're scanner friendly.

> 2) If everything else remained as it is, but they were
> at 9600 baud, would I still have been able to
> hear everything?

The new Trunktracker can hear the 9600 baud traffic, it just can't trunk
track it.

1651. Monday Pursuit near FM 620

Yahoo group: CenTexComm
Date: 2003-05-19 13:30:07 UTC
From: Robert Barker
Topic: 1651 Message: 1651

Details are sketchy at best but this is what I have so far.

Was on my way to work about 705am when people were calling in to the radio station 98.1 about a big pursuit with shots fired. I did not have my trunktracker with me but I put it on 154.085 TCSO and heard them on FM 620..

Williamson County, Travis County, Round Rock PD are all in it. Starflight is searching, Round Rock has 3 K9's tracking. Cedar Park has the suspect's house staked out.

Apparently the guy stole a Travis County car. I'm not sure how or what but they said he bailed into the woods somewhere near Wyoming Springs or Avery Ranch off FM 620 between Parmer and the Round Rock Hospital.

They are all looking for guy: a white male, black shorts, tennis shoes, with no shirt.. and all of a sudden coming down the trail are Round Rock High School students .. all a white males, black shorts, Tennis shoes, with no shirts. the cops are going crazy. They have finally shooed the high school kids back to school and now they have the entire area locked down still looking for the guy..

they said he has bite marks on his hand .. I don't know who bit him.

Hopefully it'll be on the news

1652. Manhunt underway near RR 620

Manhunt underway near RR 620
05/19/2003

By Micah McCauley / KVUE News

A search is continuing for a man who escaped the custody of Travis County sheriff's deputy by stealing his patrol car, a sheriff's office spokesman said.

About 1 a.m. Monday, an Austin police officer in the 6800 block of Airport Boulevard in Northeast Austin saw a man driving in a stolen car, said Roger Wade, spokesman for the Travis County Sheriff's Department. The officer tried to stop him but he sped off and a chase ensued, Wade said.

The man bailed from the stolen car near Parmer Lane and Farm Road 1431, Wade said.

The sheriff's department's canine unit was called to assist in the search, Wade said. The dog found the man, bit him on the hands and held him until deputies arrived. The man was arrested and taken to Round Rock Hospital for treatment of the bites, Wade said.

This morning, after treatment, shortly before 7 a.m. the man was being guided out of the hospital to a waiting patrol car, Wade said.

Round Rock Hospital policy is that people in police custody must be handcuffed with their hands in the front, Wade said. TCSO policy is that suspects must have their hands cuffed behind them to ride in a patrol car. Two deputies were in the process of moving the cuffs when the man attacked one of the deputies and broke free.

The man ran to the waiting patrol car, which had the keys in it, and sped off. One of the deputies at the hospital shot out a back tire as the man drove off, Wade said.

A second chase ensued, and, at one point, another car tried to ram it off the road.

The driver stopped and ran into a wooded area near Ranch Road 620 and Great Oaks Drive, Wade said.

Deputies describe the man as white with a beard. He was last seen wearing black shorts.

Because of the manhunt, several Round Rock Independent School District schools -- Great Oaks Elementary, Cedar Valley Middle, Brush Creek Elementary and Fern Bluff Elementary -- were placed in a type of lockdown as a precaution.

1653. Subject arrested from the Monday Pursuit near FM 620

Yahoo group: CenTexComm
Date: 2003-05-20 13:19:25 UTC
From: Robert Barker
Topic: 1653 Message: 1653

The subject attempted to reach his house in Cedar Park this morning about 645am and was arrested by Cedar Park Police Dept. He is currently at the Round Rock Hospital along with tons of media.

taken into custody at 2109 Zeppelin Drive

There was a lot of concern about not having any direct way to notify the schools to go into lockdown if something like this happens again. that's true.. not like they could go onto a frequency where all the schools would be monitoring or switch over the school guard's radio channel.

Also there was a lack of communication between agencies.. Travis Co cannot talk to Round Rock or Cedar Park or Williamson County. Even if Travis Co goes digital, I don't think either agency will know about or may not have the capacity to use one of the 5 NSPAC frequencies used for 800 Mhz Law enforcement common.

1654. Re: [CenTexComm] Caldwell County System

Yahoo group: CenTexComm

From: Aaron Slaughter
Topic: 1649 Message: 1654

Here is a little insight on the Lockhart / Caldwell County system. It is a Smartnet Astro 3600 baud system however, the Digital is not used very much at all. The equipment is just too expensive for the City to continue to purchase. The police department and EMS are the only agencies with radios capable of digital. The PD still uses it from time to time, mostly for chit chat. Everyone else is solely analog. The city is in the process of expanding the system, we are just waiting for the quote from the BIG "M". I hope this helped out.

OK, I just got back from Palmetto State Park.
Thanks to everyone who helped me out with
the frequencies for the counties and the park.

Now I have a question about Caldwell County's
Astro system. I programed in the frequencies as
a Motorola Type 2 system into my Pro-93. I plugged
in the talkgroups from trunkedradio.net. And it all
worked like a charm.

I don't understand why, if this was an Astro 3600
baud system, why was I able to hear everything?
1) Was it because they are not using the system
as a digital system but using it as a conventional
system? And if so, why would they do this?
2) If everything else remained as it is, but they were
at 9600 baud, would I still have been able to
hear everything?

1658. National Weather Service new campagn

Yahoo group: CenTexComm
Date: 2003-05-22 02:41:29 UTC
From: Aaron Slaughter
Topic: 1658 Message: 1658

I received this today from Larry Eblen from the National Weather Service, Austin-San Antonio Office

Aaron Slaughter
Communications Coordinator
City of Lockhart

All,
The NWS launched a new campaign this morning, hoping to convince motorists not to risk their lives and the lives of friends and family by driving into deep water. The number of deaths in the July Flood of 2002 was markedly lower than in the October Flood of 1998, but the causes of the deaths were still the same. All were drownings - around 80 percent caused by driving into deep water and around 20 percent due to children or young adults playing in or walking along the flooded creeks and streams.
We've tried to say this every way we can think of. Hector Guerrero, Warning Coordination Meteorologist at San Angelo, has come up with a great phrase that we want people to remember - "Turn Around, Don't Drown." The NWS decided to introduce the program today, since this is "Hurricane Awareness Week" and today centered on the theme of "Inland Flooding." I apologize for not getting this message out earlier, but I am on evening shift tonight.
The campaign currently covers the southeastern quarter of the U.S., but will likely become a national campaign in the next few weeks. I've included the text of the Press Release below. If you have some ideas or suggestions on how to make this really effective, please give me a call.
Larry

Contact: Larry Eblen FOR IMMEDIATE RELEASE
(830) 606-3617 ext. 223 May 21, 2003
NATIONAL WEATHER SERVICE, PARTNERS LAUNCH FLOOD SAFETY AWARENESS CAMPAIGN
TURN AROUND, DON?T DROWN (TM) are literally ? words to live by. The slogan is the cornerstone of a nationwide flood safety public awareness campaign designed to help reduce flood-related deaths in the United States. The National Weather Service (NWS) Southern Region launched the program with the Federal Alliance for Safe Homes (FLASH) and other partners, to enhance public awareness of the dangers of driving or walking into flooded areas. The National Weather Service is one of the agencies under the National Oceanic and Atmospheric Administration (NOAA). NOAA is an agency of the Department of Commerce.
Storm data records, accumulated over a 30 year period (1972 - 2001), show the average annual death toll for floods is 127 ? compared to 73 for lightning, 68 for tornadoes and 16 for hurricanes. Approximately 80 percent of those deaths occur when people drive or walk into moving water.
?While it is clear that flooding from tropical cyclones or inland thunderstorms is our nation?s number one, weather-related killer ? the real tragedy is that most of the deaths are avoidable,? said Bill Proenza, director, National Weather Service Southern Region. ?It only takes two feet of moving water to float most vehicles and as little as six inches to knock someone off their feet. If we can reach people with the simple message ?Turn Around,

Don?t Drown? ? we will save lives.?

?Turn Around, Don?t Drown introduces good common sense into life or death decision-making,? said Leslie Chapman-Henderson, president and CEO of FLASH. ?It will save lives because it teaches the dangers of inland flooding while giving all of us an easy way to remember the risks. That?s what effective public safety campaigns do, and why we are honored, along with our many partners, to be part of this one.?

Colorful posters, depicting the Turn Around, Don?t Drown slogan on a barrier blocking access to a flooded roadway, and small (4" x 4") automobile window stickers were created for the campaign. The image will also appear on the Flooding Safety card in the Alliance?s Flash Cards weather safety package distributed to and through its participating partners in government, the insurance industry and the non-profit community.
The poster, a Turn Around, Don?t Drown sign, window sticker, FLASH card and a NWS flood safety brochure are also available online at: http://www.srh.noaa.gov/tadd Visitors are encouraged to download, re-produce and distribute the images through community civic organizations, schools, government agencies or private businesses.
The announcement was timed to coincide with National Hurricane Awareness Week (May 18 ? 24). Each day centers on a different hurricane-related weather event and today?s focus is Inland Flooding.

The campaign concept originated with Hector Guerrero, warning coordination meteorologist for the NWS Southern Region Weather Forecast Office (WFO) in San Angelo. It began when he was teaching a SKYWARN storm spotter training class which included firefighters from Harlingen, Texas.
?I was looking for something along the line of the fire prevention slogan Stop, Drop and Roll,? Guerrero said. ?We came up with Turn Around, Don?t Drown and I thought it was quite appropriate to have firefighters in the creative mix. Since they are usually the first to respond to flood emergencies, their lives are at risk along with the people they are trying to rescue.?

Based in Tallahassee, Florida, the Federal Alliance for Safe Homes is a not-for-profit organization dedicated to preventing and minimizing personal injury and property damage suffered in natural or man-made disasters. Formed by a coalition of private companies and public agencies with expertise in disaster prevention and relief, FLASH was created in 1998 to educate and inform people about preparing for and dealing with disasters. Originally established as the Florida Alliance for Safe Homes, FLASH expanded its mission beyond Florida last year and now serves the Southeastern U.S.
The Commerce Department's National Oceanic and Atmospheric Administration is dedicated to enhancing economic security and national safety through the prediction and research of weather and climate-related events and providing environmental stewardship of our nation?s coastal and marine resources. To learn more about NOAA, please visit http://www.noaa.gov.
Detailed safety information about preparing for and dealing with weather-related disasters is available online at both FLASH and National Weather Service web sites, http://www.flash.org and http://www.srh.weather.gov .
###
Turn Around, Don?t DrownTM is a Trademark used by the National Oceanic and Atmospheric Administration?s National Weather Service.

1660. train collision

Yahoo group: CenTexComm
Date: 2003-05-22 14:38:34 UTC
From: David Litsinger
Topic: 1660 Message: 1660

Tuesday (I think) there was a collison, train vs. vehicle, vehicle lost -- in Williamson Co. POV approaching Hwy whatever (Hwy 29?) from a sideroad, stops on the RR tracks waiting to enter the Highway. NO, NO, NO. Never stop on a RR track. UP Freight train came upon the POV and POV had no where to go, driver and two dogs dead. I tend to perk up when ever I hear of these accidents, my dad was a locomotive engineer for UP out of Los Angeles.

Dad used to send me his monthly magazine from UP, and several years ago they had an article out of Idaho where they were filming a traffic safety film on car - train collisions. They parked a car across the track, complete with the Ernie dummie and filmed by several cameras. Hit the car broad side with two endinges doing about 30 or 40 mpm. Car and dummies splattered all down the RR tracks, and the engines, well, there was some chipped paint on the coupler!! Train won, car lost.

Dad used to comment that the only thing a front end crew feared more than anything else was seeing a tanker truck stopped on the tracks ahead of them. That's about the only sure thing that will take out the head end crew. UP and ATSF on two separate occasions many years ago lost crews from this type collision.

About 2 - 3 years ago, an AMTRAK hit a garbage truck nearly same area of Williamson County east of Round Rock, derailed the train in the process and killed the truck driver.

Dont mess with a train, it's bigger than you.

From: Lindsay C. Blanton
Topic: 1662 Message: 1662

Hi Folks, there have been a few reports of APCO-25 digital showing up on DPS frequencies and their new narrorband refarmed assignments. We might start monitoring all of the statewide licenses for APCO-25 activity. Currently, Project-25 communications have been reported in the Austin Metro area on 159.2175 by Robert Barker. The use is currently unknown.

These are all the new assignments for the Texas DPS System statewide:

154.6650
154.6725
154.6800
154.6875
154.6950
154.7025
154.9200
154.9275
154.9350
154.9425
154.9500
154.9575
155.4450
155.4525
155.4600
155.4675

1663. Hearing DPS (Capitol??) on 159.215 which is acutally 159.2175 in downtown Austin TX

Yahoo group: CenTexComm
Date: 2003-05-24 14:16:13 UTC
From: Robert Barker
Topic: 1663 Message: 1663

The last week or so I'm hearing what sounds like an ASTRO digital repeater on 159.2175 (actually shows as 159.215 in my scanner).. Sometimes it sounds like transmissions and sometimes it sounds like a stuck transmitter as the noise will be there for 30 mins or more. I'm not sure who or what this is..but I have to assume it is DPS.. I'm only hearing it downtown Austin so it must be related to DPS Capitol who was using 155.445 or may be the actual Capitol Police who were using 460.125 460.075. I am really not sure and will have to monitor further.

If anyone can help monitor and at least from traffic on the other analog frequencies (or lack there of) perhaps we can Identify who is using it. Who has a new Digital scanner .. the BC785D or the BC250D with the digital card that can tell us what they are saying on these frequencies.

1664. Spotty Heavy Rain Tonight into Tuesday

Yahoo group: CenTexComm
Date: 2003-05-25 13:45:38 UTC
From: Robert Barker
Topic: 1664 Message: 1664

All,

We've been watching a slow-moving upper level disturbance that's currently over southern California. It's headed our way, and will take until Wednesday to go by us. In the mean time, a weak cold front will move into South Central Texas tonight and become stationary. That sets the stage for a prolonged rain event.

Our concern is that accumulations could approach 3 or 4 inches in places before this system dislodges and moves out. The threat area is from the Hill Country eastward across Austin, Georgetown, Bastrop, and Giddings for late tonight into Tuesday.

This problem is compounded by fact that it is a holiday weekend, with a greater than normal number of swimmers, tubers, boaters, fishermen, and campers on our creeks and streams. We seem to have this problem from the Hill Country eastward across the Austin Metropolitan area on every other Memorial Day.

We wanted to give a heads-up with some advance warning. This event is still some time away and it could easily fall apart if the upper low speeds up, or if the front moves into the Gulf before stalling, etc. The best defense is to monitor the weather as it unfolds. On the internet, you can find:
our 7-day forecast at:

1666. Few more questions....

Yahoo group: CenTexComm
Date: 2003-05-26 09:51:21 UTC
From: twn_tbo
Topic: 1666 Message: 1666

Ok, I think I've asked this before but I have a Bearcat 245XLT handheld and I was wondering if there are any basic mods or aftermarket accessories availible for it that could boost its reception. I'm kind of a newbie to this so pardon me if the question is a bit vague or sounds funny.

Also, I'm going to be heading down to the coast in the next two weeks and I was wondering if you guys had and freqencies for Corpus/Mustang Island/Port Arthur areas?

What is one of the mid/higher echelon base units availible today? I'm thinking of getting one for the home.

Thanks a lot

1667. Wait to buy a new trunktracker, Radio Shack is supposed to have a compatable one for 9600 baud soon, Memorial Day Weekend traffic

Yahoo group: CenTexComm
Date: 2003-05-26 15:48:14 UTC
From: Robert Barker
Topic: 1667 Message: 1667

There are no modifications available to the BC245 that I know of. The best way to get better reception on 800 and 900 Mhz frequencies is to get a better antenna. The stock antenna that it comes with is very bad for these frequency ranges. Try for something specifically tuned to this band with a BNC connection of course.

The base equivalent right now is the BC785D. It still will not decode 9600 baud trunking so my advice is NOT to purchase any new scanner now.

From: Mike McKenna <way2twohot@...>
Date: Sat, 24 May 2003 22:13:39 -0700 (PDT)

Radio Shack has conformed that they will have a NEW Digital scanner of
their own - selling at a lower price than the Bearcat Models AND that the Radio
Shack Digital Scanner will be compatible with ASTRO 9600 baud systems.
Radio Shack released this information to its managers and stores by way
of its monthly newsletter. Radio Shack said that the information on the
internet and Strong Signals site was correct BUT did not come from Radio
Shack. www.strongsignals.net This scanner should be due out around November, about the same time the city will begin using the new system as it's primary. If you absolutely have to have a scanner right now, then check the pawnshops for cheap trunktrackers.

APD is supposed to be using an ASTRO 9600 baud digital system so you would need to wait for this radio if you plan to trunktrack any of the Austin City or Travis Co services.

As for Corpus Frequenices, they are also on a trunked system at:
http://www.trunkedradio.net/modules.php?name=TRSDB&sid=17

_____
Gosh what a busy day on the Lake yesterday.. I think they lost a swimmer near Devil's Hollow and the Dive Team is set to resume today to look for the female who never came back up out of the water. About the same time that was going on .. they had a female actively seizing onboard an LCRA Ranger boat and they and to meet STARflight by West Beach Marina and then Pedernales has some other person who dived off rocks and hit their head in the water all yesterday about 6pm.

I just bought an antenna from Radio Shack. It is made
for 800Mhz. I like it very much. Great reception for
trunking. Also, for vhf frequencies. It has a BNC
connection and it is not too big.

1671. Trunk tracking

Yahoo group: CenTexComm
Date: 2003-05-27 07:20:58 UTC
From: twn_tbo
Topic: 1671 Message: 1671

Ok, im beginning to understand how trunking works and and getting used to the idea. There are 8 or 9 frequencies in the range which all have talkgroups. How does the scanner distinguish between talkgroups if you cant program it to only scan, say, the xxx command talkgroup?

DEC AFS Display Description
3 00-003 Fire/EMS Dispatch
529 04-021 FIRE DSP Fire Department Dispatch
530 04-022 GROUP 7 Fire Incident Command
531 04-023 GROUP 8 Fire Incident Command
532 04-024 GROUP 9 Fire Incident Command
533 04-025 GROUP 10 Fire Incident Command
534 04-026 GROUP 11 Fire Incident Command
535 04-027 GROUP 12 Fire Incident Command
536 04-030 GROUP 13 Fire Incident Command
537 04-031 GROUP 14 Fire Incident Command
THis is what was on the corpus site you gave me, thanks by the way, and I'm not really getting how these are entered into the scanner and how they work. I'm just kinda clueless as to what this means...

1672. How the trunktracking works on my Uniden 245XLT scanner

Yahoo group: CenTexComm
Date: 2003-05-27 11:47:47 UTC
From: Robert Barker
Topic: 1672 Message: 1672

I can only explain how it works on my Uniden 245XLT. You put the scanner in the TRUNKTRACKING program mode and you enter the frequencies from the list of the closest tower. You then leave the radio in SEARCH mode so It will search out all the talkgroups. If you are receiving the control ch correctly you will see dashes when they are not talking. When they do talk, you will see the talkgroups and that's how you will know who it is that's talking. If it's a talkgroup that you don't want to hear (like road and bridge) then you can lock out that talkgroup. You can also scan a set of talkgroups if you are absolutely sure you know what talkgroups to hear but I don't advise it since they can change when they do things like group calls etc. The talkgroups can display in either format listed such as 04-021 or 529 if its EDACs or Motorola Type 1. I prefer the xx-xxx format so you can easily identify if it's police or fire. Most all the 02-xxx are police. Motorola Type II systems, such as Williamson Co have a different set of displays but it's the same basic idea. If you are anywhere in Austin, I'd be happy to meet up and show you how it works on the Trunktracker

1675. NHP running unlicensed freqs

Yahoo group: CenTexComm
Date: 2003-05-28 16:32:52 UTC
From: David J Ellis
Topic: 1675 Message: 1675

This isn't exactly Central Texas related but I thought it was funny
and worth pointing out.

Apparently the Nevada Highway Patrol built a new communications
network a few years back but never got the frequencies licensed with
the FCC. Now they face redoing the whole system and possible fines to
boot, all at considerable cost.

Initial story broke here:
http://www.theinquirer.net/?article=9665

1676. Update on the Austin Trunked System; EMS going online first

Yahoo group: CenTexComm
Date: 2003-05-30 04:23:54 UTC
From: Robert Barker
Topic: 1676 Message: 1676

I'm told that they are already starting to install 800 Mhz trunked radios in ambulances and some other city vehicles. EMS and TCSO are one of the first two agencies to make the switch. Expect soon (like it could be as soon as in the next few weeks) to see them using and talking on 800 Mhz radios .. but you will still hear them on the VHF and UHF frequencies as they will be simulcast for some time until all the installs are done and working. .. then they will turn off the 462.975 462.950 the other frequencies we all listen to now. I do know much else about this. Please.. let me know if you see EMS or TCSO or any city agency using 800 Mhz radios.. they will be easy to spot cuz the antenna is usually very long on a handled and very short (3") or has a curly coil (pigtail) like a cell phone car antenna for a mobile

I'm told that EMS will not be doing patient reports on 155.340.. they will use Cell phones for awhile. they should have been doing that years ago. If I had my vote, I wish the guys on APD ch 11.. the Narcotics guys will be the first to switch since they are so boring and clog up the channels anyway.

The initial users of the system will be A/TCEMS, TCSO Patrol, and Water/Wastewater. These users will be participating in what is known as Operational Burn-in. The system must function for 60 days without any "glitches" before we will accept it from Motorola. At the end of a successful 60 day burn-in, other agencies will begin moving onto the system per their individual schedules.

The Austin Fire Department is currently looking at Jan of 04.

1678. Some APD units already have the new computer/radio system installed,

Yahoo group: CenTexComm
Date: 2003-05-30 11:36:55 UTC
From: Robert Barker
Topic: 1678 Message: 1678

Another person has sent me this update..

Some APD units already have the new computer/radio system installed, the MDC (moble data computer) are up and running in select units... They are the Motorola 520 mdt's and have a color monitor with touchscreen driven by Windows 2000 Professional. The new software replacing DEORS is called Versadex, it is up and running and it will take one year to transfer the DEORS data to Versadex. Also if you notice on some units you will see a little chrome antenna ring like used for the current UHF radios and the old style MDT's. they once used a flat white hockey puck antenna for the MDT's now they use a 1/4 wave antenna with a chrome base.,... Now you will see some units with just the chrome base, and where a metal rod would stick up as the antenna will be no more. All you will see is a silver ring with a little black nub. From a distance you may think someone broke the antenna off the trunk and all you see is the base. That antenna is for the AVS or automatic vehicle locating system, it's a transmitter of some sort... and will give you the location of the police unit on a GPS map of some sort. it will also notify your supervisor if the police unit goes over 90MPH or if the overheads are activated. With the new Versadex you will be able to get involment from your screen, dicats mug shots/photos right on your screen. You can also type your report in the car and press a button and it will upload it into the database for you.

1679. Big Biker Fest this weekend; frequencies, parade, concert and SHOCK and AWE fireworks display

Yahoo group: CenTexComm
Date: 2003-05-30 15:47:49 UTC
From: Robert Barker
Topic: 1679 Message: 1679

The Bikers have invaded Austin for their big ROT (Republic of Tx Rally)
http://www.rotrally.com
The schedule of events is link is:
http://www.rotrally.com/Pages/Public/Events_detail_print.asp?u_event=20

But what you need to know is that tonight (Friday) they are having a parade from the Travis Co Expo Center to downtown, Congress Av and 6th street where they will have the free concert on Congress Av.

7:00 - 7:30 PM: Stage up for escorted parade to downtown Austin

7:30 PM: Parade departs the rally site for downtown

8:00 PM - Whenever: Biker street party in downtown Austin featuring a free concert by Bad Company former lead singer Brian Howe

****
Then Saturday night:
Is an all day event at the Heritage Center followed by

10:45: ROT "Shock and awe" fireworks display on the rally premises
****
Ok so what about the frequencies:
APD Motors will be everywhere and will escort the parade.. probably on
460.500 or 460.025
(assuming they don't go digital by this weekend)

Motorcycles may use FRS frequencies

464.000 http://www.main.org/msettx/index.html Motorcycle Special Events
Team Primary
463.450 Secondary
461.7125 Backup Frequency
462.675 Travis Co React
446.000 "Scooter Net" whatever that means. This is a ham frequency

From: Frank E Jacks, Jr
Topic: 1008 Message: 1683

Just got back yesterday evening from a trip to Fiesta Texas in San
Antonio with the family.
Took my scanner into the park. Didn't have any trouble getting it past
security. They really didn't even blink an eye at it. My shoes were the
most problem. They must have some sort of metal plate in the heels.
Here are the frequencies I monitored and confirmed while there:
461.0000 Main Ops
463.7000
464.8500 Security
461.1250 Channel 2???
462.1125
462.7375 shows
461.6125
463.2375 shows
I heard them constantly saying to one another, "Can you 21 me at 6348" or
another 4 digit number. Is this Nextel?

Well, I could have easily gotten them confused.
I was trying to listen to the scanner and make notes all the while
visiting the park with the wife and kids. Those two things don't really
go together well most of the time :)
So that would make it:
461.1000 Maintenance
463.7000 Park Ops
464.8500 Security
461.1250 Channel 2???
462.1125
462.7375 shows
461.6125
463.2375 shows

Right, Ops as a whole used to be on 463.7... they have moved Ride Ops onto Channel 1 (461.1) along with maintenance a couple years ago and reassigned their talkaround to Channel 2. Channel 3 (463.7) is now used for Park Ops (Front Gate and Special Events), Marketing, etc. with Channel 4 as their talkaround. Channel 5 is still Park Security (they reassigned them from 600 units to 500 a couple years ago also, I believe)... Channel 11 is used for Parking Lot Security & Ops. That's about all I can remember off the top of my head.

1687. Re: [CenTexComm] Constable

Yahoo group: CenTexComm
Date: 2003-06-03 02:10:18 UTC
From: Nicholas McLarty
Topic: 1687 Message: 1687

The constable and his/her deputies serve as officers of a Justice of the Peace court. Their primary function is to serve civil and criminal processes, warrants issued by a JP (any citations written by an agency other than municipal police departments are filed in JP court), and subpoenas, and to provide court security for their JP court (Section 86.021, Texas Local Government Code).

Now, in addition to those duties, some constables conduct traffic enforcement, serve as school resource officers, assist municipal police and sheriffs, and anything else they may enter into agreement with a city/county.

What's the difference between sheriffs and constables... the sheriff is an officer of the County Judge versus the constable being an officer of the Justice of the Peace... it all comes down to jurisdiction -- counties versus justice precincts. Justice of the Peace courts have jurisdiction over all civil and class C criminal misdemeanor cases (the county level of a city's municipal court), County courts have jurisdiction over greater civil and misdemeanor criminal cases, and District courts have general jurisdiction over all criminal cases.

As for every county having constables... I believe (although some very rural areas might prove me wrong) that every justice of the peace precinct has at least A constable, although there may not be deputies.

This is briefly how I understand the court/officer of the court system in Texas, if there's any other differences... someone share. :)

What exactly does the Constable's Office do? I thought in Texas the were officers of the court and assisted local police (though how that differs from the SO is beyond me).

The reason I ask is this. I was at Springwoods Park with my son and saw a Williamson County Constable come and go about 5 or 6 times. He was sitting the back of the park and I seriously doubt he was running radar. For one the trees blocked the road and two he couldn't very well speed out of a local park to catch the speeder. I didn't have my scanner, but couldn't figure out WTH he was doing.

Also, does every county have a Constable? Seems like small ones (like Loving, population 70) wouldn't need one, unless they're just required by

law.

John

From: David Litsinger
Topic: 1688 Message: 1688

1. Someone once noted to me that the constable is the only person who has the authority to arrest the sheriff. I recall that about '74, old sheriff T.O.Lang had just retired, that idiot ex AF provist was just elected and announced that he was requiring ALL employees to re-submit a job application before he would consider retaining said employee / deputy, subsequently about half the deputies quit the force. At times, expecially graveyard shift, there were a total of 2 deputies on the street for the whole county, the constables along with their deputies did quite a bit of 'police' type patroling. (I also know of at one incident that the constables were prime instigators in cracking an armed robbery case).

2. I also subscribe to the ALINCO djx-10 site, and there have been a few unwanted xxxmembers posting xxxsolitations. Watch out.

3. The most rediculous site to behold is me trying to type this posting while this rediculous little black kitten is trying to sleep on my keyboard!!!!

FYI - Radar bounces off of solid objects. It is possible to bounce the radar signal off of a tree and into the roadway. The resultant speed measurement is that of the traffic on the road. This is not upheld in court, but you have to prove that this is what was done (the standard is to aim directly at traffic). But, I will tell you that this was done often ("I got that tree doing 80!")

But, then a again, radar guns have been subpoenaed into the courtroom and it has been demonstrated that courtroom walls go pretty fast at times!

"DISMISSED!"

From: George Joos
Topic: 1687 Message: 1690

Basically the difference comes down to
- sheriffs and their deputies enforce criminal law. This is also true for any city police department.
- constables will enforce both civil and criminal, and in most areas do mostly civil.

So any civil court order (i.e. custody disputes, foreclosures, repos, etc) can not be done by your local officers, it must be done by constables. During several ride outs with RRPD I have seen officers trying to explain to people that RRPD can not just go kick a door in and grab the kids because someone has a piece of paper saying they have custody.

Texas, especially Williamson County, is the first state I have lived in where constables are actually out doing something. Constables from Precient 1 in Williamson County are assigned to deal with all mental health issues in the whole county. So any suicide attempt or other mental health issues that may require emergency care will result in a constable being dispatched.

That constable may have been hiding out hoping someone nearby would come home. I know the constables are constantly trying to clear out warrents (like everybody else, the county wants people to pay their bills).

George

1694. EMS may already be using Trunked radios.. Can anyone confirm....????

Yahoo group: CenTexComm
Date: 2003-06-05 14:25:37 UTC
From: Robert Barker
Topic: 1694 Message: 1694

As for City of Austin and the trunked radio system, I have been told that they have already completed over HALF of the EMS installs, meaning (I guess) that over half the EMS crews could/should be using or talking on ** DiGiTaL ** Trunked radios. I'm told that it will all continue to be simulcast (repeated) over the regular UHF and VHF frequencies that we have now at least until the end of the year. I'm not sure if all of that is correct so if you see any EMS crews, pay attention to the radios that they have and see if they are 800 Mhz. (long antenna that gets thin at the top or a very very short 3" antenna).

I have no idea if they are completely removing the UHF 462.975 radios and only leaving them with 800 Mhz or if they are leaving the UHF radios in there.

Chris are you out there??? or any other EMS guys that may know if they are using them.
I VERY interested in any reports from the field.

I was told APD Homicide is already using NEXTEL radios since there are no available channels to talk on.
They clog up Ch 7 and Ch 8 every day with drug task force stuff.. boring..

****
I am trying to keep everyone updated on radio news in and around the Austin area, If you don't subscribe please do and if you know of anyone who should subscribe, please let them know. Hopefully I'm not sending out to much email on this topic and everyone is interested. Would love any feedback and more open discussion.

1700. APD Proposes a Henry and Ida sector: see the map; TABC was at First Thursday on Congress last night; Cedar Park Fire

Yahoo group: CenTexComm
Date: 2003-06-06 13:41:07 UTC
From: Robert Barker
Topic: 1700 Message: 1700

http://www.ci.austin.tx.us/police/downloads/aprshield03.pdf

I was looking over "The Shield", APD's internal monthly newsletter and on page 5 of the April issue is a map of the new proposed sectors including Henry and Ida. I assume that is what they will call them. I wanted to try and SAVE this map on our files section but I don't know how to do that. I printed it out and I guess I can scan it and save it that way unless someone else knows how. Gosh, we need a colored map. That would be nice.

****

TABC was working a sting of the vendors selling without permits and underaged drinkers last night at First Thursday on South Congress. Apparently this is becoming quite an event for South Austin. http://firstthursday.info/ TABC uses 156.06 and could be simplex on the input 154.905 although I have never heard them do that in Austin.

****

Cedar Park Fire Dept renewed licenses on 154.370 150.805 154.280 158.745 154.310
what's that all about? I thought they had switched to 800 Trunking. Are they only on the Cedar Park System or are they on Williamson County System instead?

1701. RE: [CenTexComm] Digest Number 681

Yahoo group: CenTexComm
Date: 2003-06-06 20:04:28 UTC
From: Mike Schadone
Topic: 1701 Message: 1701

Robert,

As one of the first three to use the new radio system, we are experiencing a couple of unforeseen difficulties. These will not hold us back too much as it is mostly a manufacturing and supply issue.

All of the trucks should have been fitted with the new radios by today (06/06/2003). We will be keeping the UHF radios for a back-up. I am assuming this is to ensure communications and to provide a way to back up the new system in case of failure (we are only in the testing phase, and to pull every other form of communication from the trucks would be stupidity, IMHO).

As for the portable radios, we have them all and they are programmed. We are transitioning to a new battery/charger technology and the supply is limited. We are figuring that we will have them within 14 days and we can start distributing them amongst the crews on the week of the 23rd.

Another issue is the hospital radios. AS you may or may not know, we have developed talkgroups within the zones for hospital communications. Each hospital will have their own talkgroup (Brack having 3... Treatment, Crash, and Pedi). The radios that we were to supply to each hospital have been back ordered. Installation is slated for June 16th-20th.

Aside from that, I can tell you that some of us that have the radios installed are trying to use them as much as possible to get used to the operational differences between the two units. Though, some of us are waiting until the official rollout. In my experience, the digital system has more clarity, but also has a slight delay (akin to Nextel) which is because of the time it takes the circuitry to convert from analog and back. This may or may not be noticeable while scanning the UHF frequencies.

I hope that helped.

I did manage to download the entire Shield issue (Adobe format), and
then printed out page 5, but could not download just the one page
with the map. Hmmm, I guess this means Austin is becomming a big city?

1704. I can tell who is on 800 Mhz and who isn't. They sound like they are in a hole

Yahoo group: CenTexComm
Date: 2003-06-08 15:40:53 UTC
From: Robert Barker
Topic: 1704 Message: 1704

Yesterday I started noticing the difference. on 155.715 EMS County, 154.085 Travis Co SO and 153.950 Firenet. I started noticing when handheld keys up and they are on 800 Mhz. They definitely sound different. Like they are in a hole or a tunnel or something. Not everyone has converted but you can tell that some units are on it.

Let me know about what yall are hearing.

1705. Did you hear the one about the 55 (drunk) driver that got away.... from APD

Yahoo group: CenTexComm

Topic: 1705 Message: 1705

Did you hear the one about the 55 (drunk) driver that got away.... from APD
Edward sector, Charlie sector, TCSO, Manor PD and Elgin PD.....yep.. they all lost him. no one could catch him.. occupied 3x.. It happened about 1 am this morning.

whatever happened to AIR -1. ????

Why is it that if I were to get chased by the police they would probably follow me to the end..they would never terminate the pursuit.

From: ExLngHrn@aol.com
Topic: 1707 Message: 1708

I know the Army Corps of Engineers has a small ranger force for security/patrol. I believe they're on the Williamson County trunked system on the constable/JP or traffic groups. I don't know the unit numbers or if they have a separate radio system of their own.

1709. Call codes that Travis Co (TX) uses

Yahoo group: CenTexComm
Date: 2003-06-11 19:41:20 UTC
From: Robert Barker
Topic: 1709 Message: 1709

Our local Sheriff's department (Travis County, TX) uses call codes when they dispatch a call. It's very hard to know all the codes and I'm thinking they are standard somewhere on the web where I can look them up. This may be a TEXAS thing but I'm not sure. Two of the more popular codes are

0100 - Murder
3500 - Deceased person
3600 - Accident (traffic accident)

Does anyone know where I can find a list of these codes?

1710. TCSO

Yahoo group: CenTexComm
Date: 2003-06-11 20:36:15 UTC
From: Michael
Topic: 130 Message: 1710

As of 1530 TCSO (154.085)has switched dispatchimg over to 800mhz handhelds just for a trial period they are only working off of 800 Protables and leaving the Console open for only the units without 800 radios.
To me if the whole thing sounds like it dose (Like they are talking under water or a bad Live feed from the internet) Will it sound the same way once the whole county is on the digital system ?

1714. New Scanner specs and the SWAT call from Last night AT Balcones Woods and 183

Yahoo group: CenTexComm
Date: 2003-06-17 17:07:55 UTC
From: Robert Barker
Topic: 1714 Message: 1714

The FCC has type-accepted the GRE (Radio Shack "Pro 96") Digital scanner.
Some of the documents, including owner's manual and external photos are at:

http://www.snowcrest.net/marnells/digital-scanner.htm

****
Last night they had a SWAT callout in Adam Sector off 183 near Balcones Woods and it very interesting. They had a man who originally was reported to have a hostage in the parking garage of the business. It was a mess. The man originally fired several shots and one of the Adam officers fired back at him. They paged out SWAT but they were a bit slow to respond, probably since they had already had a previous call earlier that day that amounted to nothing. It was clear that they were totally unprepared for this type of a situation and were a bit freaked out by everything. They did not have enough of the SWAT team arriving quickly enough and there wasn't enough communication back to the dispatcher letting them know that this man was shooting and had a hostage (at one point supposedly). Units were on Ch 8 460.500 direct and other units were using the repeater and talking right on top of them. Then, half of them were on Ch. 8 and the other half were still on Adam 460.100. They even commented that they may need help from Travis Co SWAT or DPS SWAT, which I have never heard them do. They also asked for the SWAT Gold team to be paged. I am not sure who the team was that was there and why the Gold Team wasn't called to begin with. They asked for STARflight but then got mad when STARflight arrived over the scene because they were making too much noise. STARflight also tried to come up on Ch 8 repeater and were totally blocking out all the SWAT guys trying to whisper in the hallways of the building. By now the suspect had gone back into the building where tenants were still working. Starflight eventually ended up on EMS Ch 5 463.100 but they were told to just land at Seton NW. SWAT had this "Hollywood" idea of having the pilot land on top of the parking garage and deploy 4 SWAT team guys at a time, but their plans were quickly foiled when the pilot said he would only drop 2 at a time. No one has heard from APD'd Air 1 ... It has been out of service for a few weeks now. Anyway.. the suspect finally called 911 and they found out what office he was in and they converged on that office (well 2 guys did) and they got him to surrender. It was a real mess. Very disorganized and horrible communication.

1717. Where is intercity on the new 800 Mhz Radios.. Someone needs to tell TCSO.

Yahoo group: CenTexComm
Date: 2003-06-30 04:32:59 UTC
From: Robert Barker
Topic: 1717 Message: 1717

So Travis County SO worked the earlier DOS collision with STARflight, etc off Hwy 290 West and Thunderbird.. about 6pm and they asked for a Hays Co SO unit to assist with Traffic. Then a Park unit came up on 155.310 and said, Hays Co is calling you on intercity and the Travis Co guys are like "I have no idea if we even have intercity or where it is on these new 800 Mhz radios" So much for coordination.

TCSO keeps saying go to ch 2 and they are not on 153.935 so the talkgroup for Ch 2 is not linked to that frequency. The media was told that all communications would be simulcast on the current VHF/UHF frequencies until the switchover, but that is incorrect. They are already exclusively starting to use the system and are not providing the media with radios in which to listen.

1718. Austin Park & Pizza on 151.835 16231 North IH-35

Yahoo group: CenTexComm

http://www.austinspark.com/
Austin Park and Pizza, 16231 North IH-35, is a new kids park on I-35 east Frontage just north of Grand Avene Parkway north of Pflugerville. They are on 151.835 EMS calls will be handled by Pflugerville and Travis Co EMS. There will be EMS calls out there and and many of them will be accidents from cars trying to pull out onto the I35 feeder.

1719. Austin Summerfest Ham Convention tickets now on sale.. will be August 1st 2003 @ Red Lion Hotel

Yahoo group: CenTexComm
Date: 2003-07-02 15:29:19 UTC
From: Robert Barker
Topic: 1719 Message: 1719

Austin Summerfest

Friday August 1 & Saturday August 2, 2003

Red Lion Hotel I-35 & US 290

Advance Registration $8 now or $10 at the door

PO Box 4739

Austin,TX 78765-4739

Continuing a Ham Tradition...

Austin Amateur Radio Club, with the assistance of members of the Austin Repeater Organization, makes the Capital City the place to be in the middle of the Texas summer.

That's right-once again it's time for Austin Summerfest! As always, we're hosting the Summer Meeting of the Texas VHF-FM Society and also this year we're the ARRL West Gulf Division Convention.

We'll have lots of representation from the ARRL, including President Jim Haynie W5JBP, West Gulf Division Director Coy Day N5OK, Vice Director David Woolweaver K5RAV, and Section Managers as well.

Schedule

Come Friday and take advantage of our swapfest, dealer sales, and hourly prizes, which fire up at 6 pm and go 'til 9. Return Saturday at 8 am; swap 'til 1 and attend sessions 'til 4. At 4:30 the Grand Prize will be drawn, so consider sticking around.

Prizes

Prizes Galore! With your registration you get one ticket good for the hourly door prizes and the Grand Prize, and you can buy more at $1 each. Plus, if you rent a room at Red Lion, you'll get five bonus tickets for each room-night, up to a total of ten tickets.

You'll have frequent chances to win a door prize. Claim them by 1 pm Saturday. At 4:30, we draw for all unclaimed door prizes and go on to our "Super" Door prize of an ICOM IC-Q7A dual band handie. (We keep drawing until all these prizes are claimed in person.)

Following that, the biggie: The drawing for the Grand Prize. An ICOM IC-706 MKIIG HF transceiver could be yours!

But wait, there's more! Register in advance by mail and be eligible for still another prize-an ICOM IC-T2H 2 meter handie!

And if you're not there to claim the Advance Registration or Grand Prize, don't worry, we'll notify you.

Dealers

There'll be our usual fine contingent of dealers, ready to help you with their great knowledge of the latest products, and a great selection of them too. Think of those little odds and ends that you've been thinking of getting for the shack-well, here's your chance to get them at last.

A word about our special guests?

The Texas VHF-FM Society is a group of several hundred amateurs with a special interest in the design and operation of VHF and UHF repeaters. Starting with a small group of hams 30 years ago, the society now counts as members the licensees or technical custodians of nearly all the repeaters in Texas. It is affiliated with the ARRL. The Society initiated frequency coordination in Texas. Today, it continues in that role, minimizing intercommunity friction and helping the maximum number of amateurs operate and use repeaters. The Society educates, mediates, and arbitrates all matters of frequency coordination brought to its attention. Dues are $10 per year from August to August; Life and Family memberships are also available. Simply write the number of new or renewal memberships on the Summerfest application form, including the necessary amount in your remittance. The members of the Society invite you and your friends to join us; we know you will find it fun and rewarding to be a part of this organization.

The new Comm center opens up in Oct. they are saying that everybody will switch over to the digital system with a few patches in Feb I.E: all Fire comms Ems Primary ATCEMS county will be patched to the uhf mhz.TCSO has allready made the switch to the digital system using the new tac channels I:E Adam radio Baker,Charlie,David and Supervisor but still using the vhf due to the fact that not all of the units have the new radios

Interesting... Do you know how long they will operate on the patch
before moving to digital on a permanent basis?

1734. Digital system update

Yahoo group: CenTexComm
Date: 2003-07-13 20:09:19 UTC
From: ExLngHrn@aol.com
Topic: 1734 Message: 1734

I heard that there will be 11 talkgroups on the new digital system for the constables' offices.

Each precinct (1-5) will have 2 talkgroups, 1 for civil process service and 1 "tac" group for car-to-car communications. These talkgroups will have a constable's dispatcher during working hours

Also, there will be one talkgroup for criminal warrants and running traffic stops. This one will have a TCSO dispatcher 24/7.

-Wes

1735. Update on Tropical Storm Claudette

Yahoo group: CenTexComm
Date: 2003-07-14 16:51:37 UTC
From: Robert Barker
Topic: 1735 Message: 1735

All,

The latest update from NHC has placed T.S. Claudette at 10 am at 26.9 North, 92.7 West, still drifting toward the north-northwest at 6 mph.

The system remains between a weakening ridge of high pressure east of Florida and a building ridge of high pressure to our northwest. Computer models are basically in agreement that the intensity trends in both ridges will continue through the next 48 hours. Our problem is that the tropical system currently lies in between the ridges and has not yet sensed the strength of the one to our northwest. And so it has continued to drift northwestward.

The forecast remains that Claudette will come under the influence of the northwest ridge and begin a turn to the west. Based on its current position, this would take it inland north of Corpus Christi, near Port O'Connor just before midnight on Tuesday night as a Category 1 Hurricane. Its path from that point will move it to just southeast of Pleasanton Wednesday morning near 8 am, near Crystal City at 8 pm Wednesday evening, and crossing the Rio Grande near midnight Wednesday night.

Based on this track, South Central Texas would be in the northeast quadrant of the system on Wednesday and Thursday, which is the most likely area for tornadoes and daytime heavy rain.

You can see the latest NHC bulletins and view the latest graphic tracks at their site at: www.nhc.noaa.gov

Our hazardous weather outlook (out 7 days) is at:
www.srh.noaa.gov/data/EWX/HWO/EWXHWOSAT.1.txt

Our forecast discussion is available at:

From: Michael
Topic: 1736 Message: 1736

Ok found this out today AFD will still broadcast over UHF when they switch to the Digital System ,also they will still have all the UHF Fire comm channels This means that they will have an 800 mobile along with a Uhf mobile incase the Digital System should fail they have a backup System

1737. AFD UHF Radio still gonna be used when they go 800 digital ??

Yahoo group: CenTexComm
Date: 2003-07-15 02:33:23 UTC
From: Robert Barker
Topic: 1737 Message: 1737

So what's the point of going 800 digital trunking? When no frequencies will be giving back to the FCC and they will all still be used? I'm sure there will be many talkgroups that will not have a UHF equivalent.

****

True on the Talk Groups but I guess one thing they learned from Willco is when there system gose down the are more less SOL or they use nextel so doing the smart thing they decided to keep the UHF Channels as Back up

Million Dollar Challenge Given to Fire Service

As a proud sponsor of Helping Our Own, Firehouse Expo
has
given a million dollar challenge to the fire service.
The challenge
revolves around raising at least $1 million in
equipment and/or
financial donations during the Firehouse Expo Exhibits
in Baltimore
Maryland, July 24th through the 26th. Fire departments
are asked to
bring any unused equipment to the show, to show their
support for the
cause. Helping Our Own will have staff and trucks
available to
receive the equipment. Relief of liability forms will
be issued to
all donating departments. Helping Our Own will
officially recognize
the department donating the most equipment.

Rob Brice, Firehouse Expo show manager said
"Firehouse Expo, and
Firehouse World truly care about the Fire Service,
that's why we have
issued this challenge." Free exhibit hall passes will
be given to all
members of a department that donates equipment.

Helping Our Own is a registered (501-c-3) tax-exempt

organization that assists poor fire departments in the United States.
Founded in February of 2000, the organization has helped over 520
Fire departments in the United States with over $25 million (used
value) of equipment. Fire departments and industry have donated
everything from a spanner wrench, to a used Quint.

Helping Our Own spokesperson Gaylord Walker said, "Often when
we deliver a new apparatus, or a truck load of equipment, we see
grown firefighters cry tears of joy. If the Fire Service meets the
goal for Firehouse Expo, 20-30 Fire Chiefs could be crying those same
tears of joy."
Departments receive this donated equipment free of charge, thanks to
the support of sponsors.

You can see a list of the sponsors by going to www.helpingourown.org
or calling 877-446-6435. For information and to register for
Firehouse Expo, visit www.FirehouseExpo.com or call 800-827-8009.

1742. New poll for CenTexComm

Yahoo group: CenTexComm
Date: 2003-07-17 20:45:27 UTC
From: CenTexComm@yahoogroups.com
Topic: 1742 Message: 1742

Enter your vote today! A new poll has been created for the
CenTexComm group:

I wanted to try something new: How
about a poll: 2 questions. Where do
you live? & Do you plan to get the
new digital scanner when Austin/Travis
Co switches?

o Austin - Frank Sector, ABIA or Dell Valle or SE Trav Co
o Austin - Adam sector incl Jollyville
o Austin - Baker/George Central
o Austin - Edward Sector, Manor, Elgin or E Trav Co
o Austin - Charlie Sector, Webberville or out east Trav Co
o Austin - David Sector, Oak Hill,
o Westlake, Lost Creek, Bee Caves, etc
o Hays or nearby south county
o Pflugerville or NE Trav Co
o Round Rock, Taylor and out that way
o Georgetown or north Williamson Co
o Cedar Park, Leander, N Shore, Lago
o Dallas or DFW Metroplex
o San Antonio or Nearby
o Corpus or nearby
o Burnet, Blanco, Gillespie, Co
o Not in Texas
o Some other area not mentioned
o I plan to get a digital scanner as soon as they come out.
o I refuse to buy a digital and will just montior what I can
o I want one really bad but I will not be able to afford $499 and will wait till they get
cheaper
o I will be very cautious and wait and see what happens. I am not in any hurry
o I already have a BC785XLT or BC250XLT
o I am totally undecided on getting the scanner
o I have not paid attention and did not know the city is switching

To vote, please visit the following web page:

http://groups.yahoo.com/group/CenTexComm/surveys?id=1118790

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

> Austin/Travis Co switches?

> ? o I already have a BC785XLT or BC250XLT

correct me if i'm wrong, but it is my understanding that the austin/travis system is going to be a 9600 baud control channel, which the BC scanners can not decode, and would thus be unable to follow the trunked traffic...

1744. The Poll So far...

Yahoo group: CenTexComm
Date: 2003-07-18 03:47:25 UTC
From: Robert Barker
Topic: 1744 Message: 1744

o I already have a BC785XLT or BC250XLT

Yes I threw that question in there to see who might have this scanner.. I would love to be able to at least hear what they are transmitting now even if it will not followed the trunked systems.

Question
I wanted to try something new: How about a poll: 2 questions. Where do you live? & Do you plan to get the new digital scanner when Austin/Travis Co switches?
Austin - Frank Sector, ABIA or Dell Valle or SE Trav Co
Austin - Adam sector incl Jollyville
Austin - Baker/George Central
Austin - Edward Sector, Manor, Elgin or E Trav Co
Austin - Charlie Sector, Webberville or out east Trav Co
Austin - David Sector, Oak Hill,
Westlake, Lost Creek, Bee Caves, etc
Hays or nearby south county
Pflugerville or NE Trav Co
Round Rock, Taylor and out that way
Georgetown or north Williamson Co
Cedar Park, Leander, N Shore, Lago
Dallas or DFW Metroplex
San Antonio or Nearby
Corpus or nearby
Burnet, Blanco, Gillespie, Co
Not in Texas
Some other area not mentioned
I plan to get a digital scanner as soon as they come out.
I refuse to buy a digital and will just montior what I can
I want one really bad but I will not be able to afford $499 and will wait till they get cheaper
I will be very cautious and wait and see what happens. I am not in any hurry
I already have a BC785XLT or BC250XLT
I am totally undecided on getting the scanner
I have not paid attention and did not know the city is switching

Your vote is shown above. You can change your vote until the poll is concluded.

As of right now, they need to bring up another program and enter the address. The program returns a map page. The new CAD setup will have the map page returned on each call dispatch (I think it will come up in the short event). Also, we will have a GPS tracking unit that has map-functionality. We will be able to see our route plotted on the screen from start point to call point.

At least that's what I've been told <g>.

I show them in the FCC database with 154.235 MHz.
I've not actually been able to verify them on my few trips there.
I think I did catch Gillespie County on 46.120 though.

I know that EMS uses 154.4450. I heard Airlife talking to Gillespie County from my location in Schertz. I know that Fredericksburg fire is not using the LCRA system.

1754. CAD down all day .

Yahoo group: CenTexComm
Date: 2003-07-20 14:42:19 UTC
From: Robert Barker
Topic: 1754 Message: 1754

I don't know why but EMS says CAD will be down ALL DAY LONG. That means pretty much no MDT ALL DAY LONG. I don't know if it's broken or if they took it down for some sort of conversion. Also I heard one EMS unit saying his FIRENET 153.950 was not working.. that means their 800 MHZ radio or link to firenet is down.

CAD - Computer Aided Dispatch
MDT - Mobile Data Terminal

1755. LCRA Kendall County

Yahoo group: CenTexComm
Date: 2003-07-20 20:32:33 UTC
From: Daynes Hornsby
Topic: 1755 Message: 1755

FCC website indicates LCRA has a 'Level 2 Pending' application for the following frequencies at Boerne, Kendall County:

936.4750
938.4750
938.8875
938.4875
936.2125
936.2250
935.4250

Visited Boerne today and found the system active. 936.2125 was control channel showing CTRL-2. Signal was strongest north of Boerne and was copyable well into Comal County on Hwy 46 traveling from Boerne.

1756. LCRA TG 04-127

Yahoo group: CenTexComm
Date: 2003-07-20 20:37:49 UTC
From: Daynes Hornsby
Topic: 1756 Message: 1756

LCRA Talkgroup 04-127 active today on the Comal County site. Discussion of escorting the cheerleaders from 'Strayhand<?>' to the area near 'Joes Crab Shack'. Also talk of 'Colisieum' (street?).

I can not find this one any list. Any ideas? SWTSU?

Thanks.

1766. Austin Fire/EMS Station Goes Into Operation Fire Station #40 / EMS Station #28

Yahoo group: CenTexComm
Date: 2003-07-25 17:43:32 UTC
From: Robert Barker
Topic: 1766 Message: 1766

Austin Fire/EMS Station Goes Into Operation
For immediate release: July 25, 2003
Contact: Dale Whitaker, Austin Fire Department, (512) 477-9982

AUSTIN, Texas ? The City of Austin Fire Department will open a new fire and EMS station on Monday, July 28, when B shift reports to duty at noon. Fire Station #40/EMS Station #28 is located at 12711 Harrisglenn Dr. just north of the Parmer Lane intersection.

One engine company with four firefighters will be stationed at the new AFD facility. Later this year that engine will be replaced with a ?quint,? an apparatus that has capabilities of both an engine and a ladder truck.

In addition, an Austin-Travis County Emergency Medical Services district commander will be stationed there, with plans for an ambulance in the future.

Ground was broken for Station #40 in June, 2002. The construction was funded by the 1998 bond election. The station was built at a cost of approximately $4 million and includes three AFD bays.

A public grand opening ceremony is scheduled for August 23 at 10 a.m.

From: ExLngHrn@aol.com
Topic: 1768 Message: 1768

I am just curious if TCSO will be maintaining its VHF channels to dispatch outside agencies. I know TCSO dispatches for several small towns including Jonestown, Manor, Sunset Valley, Mustang Ridge, and Rollingwood. Will each of these agencies also be transitioning to the new radio system?

Also, what about the state agencies that sometimes use APD and/or TCSO channels? I'm thinking about DPS and TABC in particular. Does anyone know if they are part of the new radio system?

Thanks,
Wes

1772. DPS dispatcher will be on 156.060

Yahoo group: CenTexComm
Date: 2003-07-27 14:47:06 UTC
From: Robert Barker
Topic: 1772 Message: 1772

At night the DPS dispatcher comes up on 156.06 and runs 28 and 29's.

Travis Co channels 155.310 and 154.085 are sounding worse and worse on the simulcast of digital 800 Mhz signals. So far the Parks Division (Pace Bend, Hippie Hollow, Bob Wentz) have not switched yet

I still am not sure they have worked out the paging details.. For instance EMS Loves to page and they can't do that on 800 trunking so I guess they may keep 462.975 and page on that. So We may be able to hear calls anyway.

Topic: 1772 Message: 1775

Mike,

A/TCEMS is supposed to go over to the digital signal paging that y'all use. This system is supposedly able to page on the digital trunking system. Beyond that, I have a feeling that they are going to simulcast EMS CNTRL to 462.975, anyway. Also, I don't think that we are going to make the most out of the new radio system. Your thoughts?

1776. My Thoughts on Austin EMS

Yahoo group: CenTexComm
Date: 2003-07-29 14:59:00 UTC
From: Robert Barker
Topic: 1776 Message: 1776

My Thoughts,
It seems like you could give Austin EMS 200 channels or talkgroups and they will still dispatch everyone on 1 dispatch Channel. They are obsessed with the paging. I have never heard so many tones: For every call they send tones.. they voice page, they can alpha page, they send priorities on the MDT and they have Cell phones. I personally think the voice pagers need to go, since they have all these other ways to reach the crews. Every crew has handheld radios - and all you need to do is call them, if they don't answer and only if they don't answer do you need to voice page them with tones. Why send out tones for every call? Have you ever heard like 10 tones go off at once and then they say disregard the tones? What if someone were not breathing in Hudson Bend.. it says time to send out all those tones. Their CAD system is tied into the paging so if you were to hear MD1 assign me that call.. you will hear another tone.. and they will say MD1 you are now assigned to the call. They can loose the tones and save seconds of radio traffic (seconds count they say)

They have been moving people to other channels Ch 2 462.95, firenet 153.95, firemed 3 453.500 or firecom 6 453.900 but it's still the same 2 dispatchers. How are the patient reports being given to the hospitals now that they are not using Hospital 155.340. How is STARflight doing it?

If they use 462.975 to simulcast their Dispatching when they go over to 800, then I'll probably just listen to the 462.975. I actually don't listen to this as much as I just keep AFD 453.275 in to hear all the EMS assists, etc. Plus they give more information about EMS calls than EMS does. EMS will say respond to a fall, AFD will say.. this is an old lady that rolled out of her bed.
****
A/TCEMS is supposed to go over to the digital signal paging that y'all use. This system is supposedly able to page on the digital trunking system. Beyond that, I have a feeling that they are going to simulcast EMS CNTRL to 462.975, anyway. Also, I don't think that we are going to make the most out of the new radio system. Your thoughts?

1777. RE: [CenTexComm] My Thoughts on Austin EMS

Yahoo group: CenTexComm
Date: 2003-07-29 16:24:28 UTC
From: Mike Schadone
Topic: 1776 Message: 1777

Well, what I think is great is that when I hear E-22's tones and dispatch, I get in my truck and start following them. Not until after I've left the station do I get dispatched on the call. This happens quite often. EMS Comm. needs to get all of the info before dispatching us (that usually includes RA to AFD), then they finally dispatch us. Hopefully, a lot of this will change with the new system. Also to note, the new CAD server software does not support messaging. It is totally based on messaging, but it doesn't support it (all of you computer guru's out there know that this is a ridiculous implementation issue).

Anyway. Be safe.

1778. Re: [CenTexComm] My Thoughts on Austin EMS 2

Yahoo group: CenTexComm
Date: 2003-07-29 16:54:28 UTC
From: Robert Barker
Topic: 1778 Message: 1778

My parents live in Lago Vista and they will dispatch Lago Vista Fire to a scene and Medic 22 will go ahead and roll from their station but for some legal reason. they can't go code until they get dispatched the call.. I don't understand that.. so Lago Fire will get there and say Rescue 22 where are you?.. and they are like.. well we're still waiting for the call to be dispatched so we can go code 3.. Meanwhile up at EMS dispatch they are busy doing so much that just haven't gotten to it yet. Let's see the county calls will be something like 15 tones followed by: Medic 22, Lago Vista, Starflight 1, Lake Travis Task Force, Pedernales, Parks Northwest, MD1 and Spec Ops 4...respond.. water rescue..... Is that the longest you have heard? Can anyone think of the longest call to dispatch?

Also, when EMS gets a call. they usually have about "20 questions" to ask before they will dispatch it. They use a system of flip cards where they go and ask questions: Are they conscious? Are they breathing? Are they bleeding? and it just seems to take forever. seems kinda silly for a paramedic to be using flip charts but that's how they do it. for legal reasons.

1781. Hospitals will have their own talkgroups and Water/Wastewater says the audio quality is horrible

Yahoo group: CenTexComm
Date: 2003-07-29 19:36:25 UTC
From: Robert Barker
Topic: 1781 Message: 1781

Well I know that all Hospitals will have their own talk group but I have not heard the radios were installed as of yet. Brack will have like 3 or 4 talk groups.. on for Brack Treatment, one for Brack Labor and Delivery, one for Brack Crash.. etc..

also I got this email:

A friend of mine works for the Austin Water/Wastewater Department. He got
his new radio about two weeks ago. He says it works fine as long as
you're standing in the middle of nowhere. Get near equipment, inside a
building, inside a truck and it goes dead. The audio quality is horrible.
They have a "HOMELAND SECURITY" talkgroup where they're supposed to go
should they see any terrorism at a water plant.

Seton, Seton Northwest, and St. Davids (I believe) are beta testing the hospital In-Codes. So far, I have used it to In-Code to Seton and it has worked great. Along with each hospital, there are a few others that are new. We will have three consult groups to talk to the docs and consult with them. Also, we have an "ALL HOSP" group which will probably be for notifications and MCI usage.

1783. Hays / Travis County Incident?

Yahoo group: CenTexComm
Date: 2003-08-01 22:49:13 UTC
From: Lindsay C. Blanton
Topic: 1783 Message: 1783

Anyone know what is going on in Hays / Travis County?

Sounds like a large incident working on the LCRA system on LCRA COM-1.
Talk of staging, AFD sending units to assist, media on scene. A large
brush fire?

Here is what I am hearing on the LCRA Comal site:

Lots of LCRA traffic on 02-004. Some comms on 02-066.

South Hays talking on 04-142.

Also, San Antonio's "chopper 12" is on 450.6125. Probably traffic on 123.025 in the immediate area of the fire.

I just got back from the LCRA sub station Fire. It's a large transformer power thing that is burning. It started around 15:00. When I left, there were about 10 fire departments there including Yorkcreek, South Hays, Geromino, Seguin, Lake Dunlap, New Braunfels, Kingsbury, Lockhart, Austin Hazmat R-20 and E-14, and an ARFF unit from Randolph AFB. The fire wasn't all that big, just the transformer had somewhere around 28,000 gallons of cooling oil, which is what was burning.

Interesting... the LCRA system was getting a good workout in Comal
County.

LCRA COM-1 was the only tg I was gettting traffic on, it was the command
channel for Hays County Fire operations.

Thanks for the updates guys!

SAN MARCOS -- Nobody was hurt Friday, but a lot of smoke was kicked up when two electrical transformers caught fire in Guadalupe County.

The Lower Colorado River Authority is trying to determine what started the blaze.

The transformers caught fire at the Zorn Power Substation, an un-manned power regulator operated by the LCRA.

The rural area is along State Highway 123, east of San Marcos.

No electrical outages have been reported.

1795. LCRA Zorn Substation

Yahoo group: CenTexComm
Date: 2003-08-02 03:45:39 UTC
From: Robert Barker
Topic: 1795 Message: 1795

Wow lots of confusion.. Must be right on the County Line between Hays so and Guadalupe Co cuz everyone says something different. Sounds like a communications nightmare..

I'm searching the Net all I can find is:

The Application: The Lower Colorado River Authority (LCRA) requests approval to construct approximately 2.6 miles of 345-kV transmission line within Hays and Guadalupe Counties. The Hays Energy Limited Partnership, an independent power producer, plans to install a generating facility in southern Hays County. In order to allow full and reliable use of the generating capacity available at the planned Hays Energy Generating Facility, the construction of the proposed line is required between the Zorn substation and the Hays Energy Switchyard

Robert,

You're probably right about the location.

As far as the communications being kind of a mess, do you mean in fighting the fire or in being notified that the fire existed?

From: Robert Barker
Topic: 1797 Message: 1797

Well just that they had multiple agencies there and they are all on different bands.. New Braunfels fire on LCRA 900, Austin Fire on 453.xxx, Most of those counties probably have highband but I know most of Hays Co was on the LCRA system and then Who knows about Guadalupe co.

Well for once all you guys in San Antonio got to hear some LCRA traffic and we in Austin didn't get to hear it.

From: Brandon
Topic: 1798 Message: 1798

My computer has been out of commission for a while and this totally slipped my mind until i got back on here for the first time in ages... I was on N. Lamar a while back and it was the day which that 18 wheeler had crushed some honda civic on I35 killing the baby in the back seat while the 2 front passengers lived. Anyways so I was on N. Lamar trying to detour and there was this crazy nut in a silver Lincoln towncar driving like a madman. Ordinarilly(sp) this would have no merit here, but he seemed to have 1000 antennas comming out of the car and the passenger was holding what looked to be a handheld scanner/radio, not to mention the big wreck. This guy was passing on the chicken lane and everything and driving like a maniac. Just wondering if its anyone you guys might know. If so, tell them to quit driving like a moron...

Topic: 1789 Message: 1799

Hey guys, I appologize for the late response. The fire was located about 3 miles south of San marcos right on Hwy 123 just into Guadalupe County. The only damage was to one very large transformer. As far as communications, all the guadalupe people were on either 154.310 (Guadalupe Co Fire), 155.715 (Seguin FD) or 155.070 (Guadalupe SO). Hays county people were using the LCRA Talkgroup, Lockhart was using their 800 Trunked, AFD was using their 800 trunked till they go on their Handhelds, which then couldn't reach, and I have no Idea what Randolph AFB was using. I didn't get to listen in to all the communications, but communication on scene seemed to flow pretty smoth. The main trouble was trying to locate and agency with enough foam to extinguish the fire. Lockhart took over 200 gallons of foam and austin brought (I guess) whatever fit on R-20 and E-14. Then, Randolph had 500 gallons of foam on the ARFF truck.

1800. David Litsinger update.

Yahoo group: CenTexComm
Date: 2003-08-03 22:23:15 UTC
From: David Litsinger
Topic: 1800 Message: 1800

Drop in a note here on my injury. Went in last Wednesday for a skin graft operation, came home Thursday. doctors shaved a layer of skin off my left thigh about size of small bumper stiker and plasterd it under my left arm over my wound. supposed to give my skin a more natural envionment to grow back under, but now in addition to painful left arm now have painful left leg also. Taking Vicodin about every 4 hours to make live bearable. They took X-ray last wenesday just before operation, got to look at it later that evening. Surprisd to find about half dozen bird shot pellots across chest area and still a fair amount in my arm . --- NO NO NO MRI! ever! would really tear up my arm. Now, with all us radio hobbiest types and a few Fire & EMT's on board, think we can find a couple LE types to help find these goonies who shot me?
Cheers. Dave.

1801. IPN page Saba Blue Water Cafe

Austin | Traffic Advisory | 453.775 | 208 West 4th Street | Saba Blue Water Cafe w/ smoke inside; Unable to find the source; multiple units blocking street | ASA004

Well ok If I paged this as a "1 Alarm Fire" then I would get gigged by IPN cuz they would say hey.. no fire.. just smoke.. but I think it's a pretty significant scanner event (radio traffic) when a restaurant is full of smoke..and trucks are all there and people being evacuated... So I paged it as "Traffic Advisory" (when all else fails). If I were a scanner person or a media person I would certainly want to know what all the radio traffic was about.. Anyway that's why I paged it. and I certainly welcome any feedback .. Do you want to know or do you not want to know what's on the scanner?. According to IPN, even if there are 9 or 100 Fire trucks there, it's not a fire unless someone onscene reports a working fire. So what occurred was not a "1 Alarm Fire" at Saba Blue Water Cafe tongiht. But, I can certainly say that 4 engines, 2 ladders, 1 rescue and 2 battalions and an evacuated restaurant would be blocking traffic at 4th and Colorado = Traffic Advisory.

Robert ASA004

If you are not already a subscriber.. go for it.. www.incidentpage.net
They need all the dispatchers they can get as they have gotten rid of plenty of able good ones and I'm told that I must maintain at least 4 pages a week or else I'm unsubscribed so I'm desperate to come up with something.

Fire Stations and Neighborhoods that would be impacted by the Proposed Fire Budget

? Station 1 - 5th Street @ Trinity
o Removing one fully staffed (3 Firefighters) and equipped fire engine and replacing it with a Squad (Ford F350 with 2 firefighters)

? Station 4 - 1000 Blanco (Clarksville)
o Replace a fully staffed (4 Firefighters) and equipped Fire Engine with a Squad (Ford F350 with 2 firefighters)

? Station 9 - 45th Street and Speedway (Hyde Park)
o Replace a fully staffed (4 Firefighters) and equipped Fire Engine with a Squad (Ford F350 with 2 firefighters)

? Station 19 - 5211 Balcones Drive
o Removing the Fire Engine and the Ladder Truck (6 Firefighters total) and replacing them with 1 Quint (4 firefighters total)

? Station 28 - Mopac and Parmer Lane
o Currently having a Fully Equipped Fire Engine and Ladder Company (6 Firefighters total). Removing the Ladder Company completely leaving one remaining Fire Engine (4 Firefighters).

? Future Circle C Fire Station
o Spending voter approved Bond money designated for this station on the Quints and Squads that will be placed in other areas of the city.

? Future Del Valle Fire Station
Spending voter approved Bond money designated for this station on the Quints and Squads that will be placed in other areas of the city.

1805. 800 Mhz Trunking update: APD has 800 Mhz mobiles and will be getting handhelds soon; testing of IDA/Henry

Yahoo group: CenTexComm
Date: 2003-08-08 15:00:27 UTC
From: Robert Barker
Topic: 1805 Message: 1805

The information I have so far is that most of the APD cars are currently being fitted with 800 Mhz mobile radios and they are capable of transmitting on the new system right now. As of last night there was testing using the 2 new dispatch talkgroups for the 2 new sectors: IDA and HENRY. You can print out a sector map including these 2 new sectors at:

http://www.ci.austin.tx.us/police/downloads/aprshield03.pdf and print out page 5

They were testing reception, coverage and emergency ID's (can you hear me now....good)
I heard them say go to ch. 201, 202 and 211 so I'm not sure how that figures into the talkgroups.

APD is due to get their handhelds next week. They also should mostly already have their new MDC's (Mobile Data Computer) to replace the MDT -(Mobile Data Terminals). These are easily identified as they have a color touch screen.

I also went and toured the new Combined Transportation, Emergency Communications Center off 51st Street @ Old Manor Rd on the old Mueller Airport Grounds.

http://waller.ci.austin.tx.us/ctecc/index.cfm

The place is quite impressive and there wa$ a lot of money $pent on that building. Too bad they had to lay off over 200 city employees to meet their budget to pay for it all. Dispatchers will have things like individual heaters and A/C and "mood music" at every work station and can move the desktop up and down electronically at the touch of a button.

With the radio programming that I'm hearing about, I'm not seeing much effort to link the agencies together other than to put dispatchers in one place. A recent look at a constable's new radio talkgroups, shows that they were not even programmed with most of the TCSO Talkgroups such as East Tac or West Tac, which TCSO is currently using. So there is already a control issue going on where most agencies will NOT have access to other agencies groups and they will not just go to a common channel to work and operation because the dispatchers will not be able to do that.

Just this week a Constable unit tried to arrest a person who ran from him and a pursuit ensued and the chase was on. TCSO assisted but had they elected to use a TAC channel, the constable unit would not have been able to do that.

Another example, Last night they had a electric line down on East 7th which ignited a grass fire. AFD was unable extinguish the fire and needed the electric company to respond to cut off the power. A lot of time was spent calling dispatch to call electric and then having electric all their unit and tell them what was going on and getting and ETA and then calling AFD back and advising them of their ETA and then getting it back to the fire truck. It would have been a whole lot more efficient if that AFD truck were able to switch to City Electric talkgroup and advise them of the situation and talk directly to the electric crews, but that likely will never happen from what I'm seeing, even though both agencies will be on the same system.

The Media was told that all radio traffic will continue to be heard on the old VHF/UHF frequencies but that is incorrect. Travis County is already making extensive use of their 800 Mhz Tactical talkgroups and the media is not being given access to those radio channels. Also If APD does go online with IDA and HENRY sectors before the new Trunktracking Scanner is available, no one will able to hear them. If you know anyone with the media, pass this information on and please post or forward any info you have on the new system.

I was told that UT police was supposed to be on the system this week but I'm not sure about that. I was asked whatever happened to DPS, TABC and other state agencies going to a statewide system and that's all just a rumor. It's some of the same rumors that said they were going digital. Most of these agencies are NOT digital.....yet. Also I have not heard any digital traffic lately on the 159.2125 so that might have been just temporary or being played with by DPS Executive Security Detail who watches Governor Perry and yes.. they are digital, when it works.

1806. Austin 800 mhz system update

Yahoo group: CenTexComm
Date: 2003-08-09 06:35:16 UTC
From: ExLngHrn@aol.com
Topic: 1806 Message: 1806

Travis County SO is virtually exclusively on the new system. The deputies are even using the handhelds when they work off-duty jobs.

Austin EMS is going to the system more and more. The hospitals now each have a radio and are using their individual talkgroups. The handhelds are coming in the next week or so for the paramedics.

Water & Wastewater is the other organization currently using the system. Again, they appear to be using that exclusively.

-Wes

1811. Pro-96 is the only Scanner that will decode the new system.. Available in October at Radio Shack for $499

Yahoo group: CenTexComm
Date: 2003-08-11 00:31:01 UTC
From: Robert Barker
Topic: 1811 Message: 1811

The ONLY scanner that will TRACK a 9600 Digital Trunked System will be the Pro-96 that is due to be released in November for $499 by Radio Shack. Until then there is no scanner that will track this system. You can go out right now and get a BC785 (Base) or a BC250D Handheld, with the optional digital card.. and you can monitor a digital signal but it would be like tyring to use a regular (non trunked) scanner to monitor a Trunked system like Williamson County.. it will not "follow" the transmissions.
If anyone has any other info or facts to ad, please post them. I did find out that EMS is now using the new system to do patient reports on . They are no longer on 155.340. I still am not sure if STARflight is using the same system or not. Any EMS guys out there????????

* control channel (put these in your scanner now to hear buzzing)
IR - refers to Intellirepeaters.. these are little systems in outlying areas that are used only when a mobile unit ventures into that area. Obviously you will not be guaranteed of hearing all the action monitoring just an Intellirepeater. So you would want to monitor the one of the Main Sites.

From: Catherine Keller
Topic: 1811 Message: 1812

Well nuts. I love my base radio, although it won't handle trunked stuff... my Pro-94 is okay, but harder than all get-out to understand... the sound is horrible. I'd be fearful that the sound quality might be similar with the Pro-96...

I'll just keep my fingers crossed...

Subject: [CenTexComm] Pro-96 is the only Scanner that will decode the new system.. Available in October at Radio Shack for $499

The ONLY scanner that will TRACK a 9600 Digital Trunked System will be the Pro-96 that is due to be released in November for $499 by Radio Shack. Until then there is no scanner that will track this system. You can go out right now and get a BC785 (Base) or a BC250D Handheld, with the optional digital card.. and you can monitor a digital signal but it would be like tyring to use a regular (non trunked) scanner to monitor a Trunked system like Williamson County.. it will not "follow" the transmissions.

1815. SOME APD units are now Digital

Yahoo group: CenTexComm
Date: 2003-08-13 03:29:33 UTC
From: Robert Barker
Topic: 1815 Message: 1815

If you are starting to notice that "some" of the APD units sound a little weird or distorted, it is because they are using 800 digital now and what you are hearing on the 460's is a simulcast or rebroadcast of them so they can still talk to other units or be heard on the old 460 Mhz system. Yesterday on Monday was the first day I heard APD using them, especially on Edward Radio 460.325 and now I'm also hearing them on Adam Radio 460.100. I also think the SWAT team got new radios too so we may not be hearing them any more until the new Pro-94 comes out in November, and if they are not scrambled.

APD SWAT will be digitally encrypted. There will be no chance at listening to them (unless you obtain the encryption algorithm).

Be safe.

1817. 155.340 is a simulcast of one of the digital talkgroups.

Yahoo group: CenTexComm
Date: 2003-08-16 14:05:30 UTC
From: Robert Barker
Topic: 1817 Message: 1817

Last night I was driving around downtown and noticed EMS to Hospital being simulcast on 155.340. It is one of the new 800 Mhz digital talkgroups but it's being simulcast on 155.340. I only noticed this downtown. I wasn't paying that much attention, I'm not sure if it was the EMS to Brack or what but it sounds like it was.

Also noticing that a lot more APD units are switching over to 800 Mhz.

1819. What Digital Talkgoup is APD Ch 8.. noone knows. Only the radio shop people know and they aren't sharing..

Yahoo group: CenTexComm
Date: 2003-08-17 23:21:24 UTC
From: Robert Barker
Topic: 1819 Message: 1819

APD unit on a UHF handheld asking what 800 MHZ talkgroup is APD ch 8.. Noone knows. Apparently the primary Frank Dispatch went down and they had to go to Ch 8 - Citywide but noone knows where this is on the 800 Mhz radios. They have not been given any instructions and whoever the mastermind is that decided what talkgroups go with what units and who gets who's talkgroups is not sharing that information with the officers on the street. No charts exist, no info has been published, no "cheat sheets". It sounds like the fiasco from a few months ago where Travis County went fully digital and couldn't find intercity to be able to talk to Travis County parks or with Hays Co SO and they never have been able to since.

1820. Harris County Smartzone 2318 trunked system

Yahoo group: CenTexComm
Date: 2003-08-18 10:12:06 UTC
From: Andrew Williamsen
Topic: 1820 Message: 1820

Hey Guys,

I have a uniden bearcat bc245xlt and I am wanting to program in
the Harris county smartzone system into my scanner. To my knowledge,
this is done the same way any motorola type II system would be
programmed in. Here is what a gentleman has posted on his website in
regards to these freqs.

Downtown
Confirmed & Updated
8/4/2002

Control Channels: 859.2125 859.2375 860.2125 860.2375

856.2125 856.4875 856.7125 857.2125 857.2375 857.4875 857.7125
858.2125 858.2375 858.7125
859.4875 859.7125 860.4875 860.7125 866.4625
867.0625 867.5375 867.9125 867.9375 868.2375
868.4875 866.0750 866.4250

Do I need to program all of the control channels in or just pick one?
I apologize for all the questions, but I am fairly new to trunked
systems and really don't know what i am doing yet.

Thanks,
Andrew

Topic: 1820 Message: 1821

We have a whole Yahoo Group dedicated to scanning in Houston (HoustonScan).
Yes, you do need to program in all the control channels. Only one is active
at any time but it could be any one of them so you should program all.

I didn't have time to verify all the freqs against my list but check out
this list.
It should be current.
http://home.houston.rr.com/freqzone/freqs/star-net.html
You will notice there are about 16 sites in that SmartZone system. The one
you are referring to is in downtown Houston.
It has the most use, the most frequencies and you will hear the most
talkgroups out of any other site. You will not (contrary to some) hear
every talkgroup on the system. So if you want to make sure you hear
talkgroups used by a particular agency, program in the site nearest that
agency.

From: Robert Barker
Topic: 1823 Message: 1823

From: "Dave Diehl" <angola_fire@...>

The street date for this unit is November 3rd... That
will be the day they are placed for public ordering...
The dealer cost is well under 400 bucks and I look
for the opening sale to be 449.99... Not many R/S
stores presell what they don't have in inventory... I
would look for that to be the response on this new
item as well... I'm looking forward to it, Don has
done an awesome job refining this scanner... I'd look
for Win96 to hit the streets on the same day as the radio...

Reminder from the Calendar of austinfirepics

Austin Fire Station #40/Emergency Medical Services Station #28 Grand Opening

Saturday August 23, 2003
10:00 am - 12:00 pm
This event does not repeat.
Notes:
Austin Fire Station #40/Emergency Medical Services Station #28 will be held Saturday, August 23. The station is located at 12711 Harrisglenn Dr., just north of Parmer Lane. An open house will be held from 10 a.m. until noon, with a ribbon-cutting ceremony scheduled for 10:15 a.m.

1827. Stuck repeater on 454.150MHz

Yahoo group: CenTexComm
Date: 2003-08-23 14:19:52 UTC
From: Charlie Thompson
Topic: 1827 Message: 1827

Does anyone know the location of the stuck repeater (pulsing on and off) on 454.150 MHz. I called the FCC and they were of no help. 454.150 MHz is not even licensed in the Austin Travis County area.

thanks,
Charlie

1828. Re: [CenTexComm] Stuck repeater on 454.150MHz no it sounds like a control channel for an LTR system.

Yahoo group: CenTexComm
Date: 2003-08-23 14:37:15 UTC
From: Robert Barker
Topic: 1828 Message: 1828

On 454.150 I'm getting constant keying but it sounds like one of those Johnson LTR control channels You will hear a lot of those around the 452 Mhz band.. check 452.225 and 452.675 for the same thing. It's those UHF trunked systems.. something that the city of Austin could have looked at instead of going 800 digital. KEYE is on one of the systems. . I checked FCC database and the closest license is in Thrall:
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/freq_st_res.hts?db_id=19&rows=0&state=TX&freq=00000454.15000000

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/uls_call_res.hts?db_id=3&callsign=WXV595&application_id=

Were you searching and just found this or what? Who is it supposed to be?

From: Myles Barkman
Topic: 1827 Message: 1829

Are you using any other scanners nearby?
Sometimes the internal circuitry of other radios can interfere between different radios.
Try looking for sources around you like AM/FM radios, scanners, TVs, ham radios, computers, cordless phones, cellular phones, etc. Turn them off one at a time or move your scanner away from any of these sources and see if the signal is still there or gets weaker.

BTW, there is a license for a community repeater in Taylor, WXV595. on 454.150 but it looks like a typo since the rest of the frequency information shows inputs on 469.150 and simplex operation on 464.150.

The Telco problem has been fixed. Expect only minor outages if any
for the next day or so (per NOAA office representative).
Mike Nappo

What does that mean a telco problem. was it a phone line? I always thought the 162.400 was atop the KVUE transmitter tower.. do they broadcast to that tower by phone line.

1833. Show Palace on Fire

Yahoo group: CenTexComm
Date: 2003-08-26 10:14:40 UTC
From: Robert Barker
Topic: 1833 Message: 1833

I don't know why.. I was sleeping lightly I guess.. and I heard the pager go off.. it said Show Palace Adult Night club so I quickly turned on the scanner.. they said a reported explosion inside and fire. When units arrived they immediately said to deploy the ladder to the roof and requested the Smokebuster. 2 things I do not think I have heard before when they just arrive. Immediately the driver on one of the engines, I think it was 35 was screaming because they charged the hose bed while it was still on the truck. Now I think it was Truck 36 get up to the roof and their saw was not working. Lots of radio traffic and lots of walking all over each other.. then they requested a 2nd alarm and the dispatcher did a 2nd alarm on the other Box that was working (but previously winding down).. they totally screwed this one up. Then everyone is asking where Smokbuster is and someone says, oh they are here in staging. Well he says I've been requesting them several times trying to get an ETA. Why are they in staging.. so they call for Smokebuster to come up to the scene and they pass it. It was interesting listening but I haven't heard AFD this dis-organized in years. But they still did a good job with the fire. just a few minor glitches. Now they are asking for PIO and saying Congress Ave at Santiago will be shut down during the morning rush hour due to hose lines.

Yes, telephone company line. Evidently they use a phone line to connect their broadcast from the station to the transmitter tower. While old technology, it's cheap, and prone to the same problems any landline would have. What actually did go wrong? I got different explanations depending on whom I talked to when I called the office at 830-606-3617. Only common thread was "it's broke". It was down a little more than 24 hours.
...Mike

1835. Re: Stuck repeater on 454.150MHz

Yahoo group: CenTexComm
Date: 2003-08-28 00:45:05 UTC
From: Charlie Thompson
Topic: 1827 Message: 1835

I think the repeater is *unauthorized*.
I called the guy in Thrall, TX. It's not
his machine. Likewise to the Taylor listing.

The keying is *not* a nearby scanner's local oscillator.
It's a real signal coming from a repeater in the Austin
area.

I found this repeater because my Icom R3 has abolutely
NO selectivity to this frequency due to some sort of
spurious response in the R3. If you take an Icom R3 and
put it on a signal generator tuned to 454.150 you will
receive the signal (even at microvolt generator level)
all up and down the UHF band. So that stuck repeater
on 454.150 is a real pain. I guess I'll sell my R3
to solve the problem.

Cheers,
Charlie
W5CDT

1837. The new Austin System and the modulation may not work for the main system.

Yahoo group: CenTexComm
Date: 2003-08-31 22:02:42 UTC
From: Robert Barker
Topic: 1837 Message: 1837

According to the latest post at:
http://www.trunkedradio.net/modules.php?name=TRSDB&sid=2

The 2 Simulcast Cells for the City and County are using the Project-25 Phase II CQPSK Modulation on 6.25 kHz channels, which is called "Linear Simulcast Modulation - or LSM." The outlying IR (Intellirepeater) Sites are using C4FM standard Phase I modulation. This is an important note, since LSM/CQPSK Phase II is brand new in the Project-25 Spec, and Austin is one of the first systems in the country to be using LSM as part of a Project-25 system. The BC-250D has a very difficult time recovering the audio from the LSM/CQPSK sites in conventional mode, so there may need to be some DSP improvements made before LSM/CQPSK systems can be monitored. The IR sites receive just fine on the BC-250D by scanning the voice channels in conventional mode. The BC-250 cannot decode the 9600 BPS control channel used at these sites.

and since The Pro-96 manual mentions decoding C4FM standard Phase I modulation and does
NOT mention LSM/CQPSK Phase II modulation

WE MAY HAVE A PROBLEM...

Based on this information, the soon to be released PRO-96 may not be able to decode the 2 main Simulcast Cells.
But it will receive the IntelliRepeaters and, of course, the inputs.

However, the manual posted for the Pro-96 @
http://www.snowcrest.net/marnells/digital-scanner.htm
may be revised several times before it is actually released.

According to: http://www.strongsignals.net/

A select shipment of PRO-96s are already in the country and will be put up for sale on the www.RadioShack.com web site for IMMEDIATE purchase sometime in the VERY near future. If you REALLY want a PRO-96, then I would STRONGLY suggest that starting today, you begin checking their web site for the release of these first available 96s on a daily basis (and throughout each day if you're smart).

I was told that this first batch could be available at any time and this will LIKELY be before the next ** two ** weeks are out. General availability of the PRO-96 is expected to be in the last weeks of September or the first weeks of October.
http://www.radioshack.com/searchplus.asp?type=ALL&find=20-526&pagetype=toggle

Also, Uniden (not Radio Shack) will be releasing 9600 baud digital-capable versions of their current handheld and base/mobile models. Model numbers

will be BC296D and BC796D and they are slated to be released in November.

1838. 460.025 is now the simulcast of the new IDA sector. I

460.025 is now the simulcast for IDA sector. APD no longer has a Tac 1 on UHF
460.500 is pared with the RAT talkgroup so I suspect it will be silent.

The ONLY good thing to come from this will be perhaps the boring narcotics people will go to 800.

http://www.radioshack.com/searchsku.asp?find=20-526

Digital Trunking Handheld Scanner

$499.99
Catalog #: 20-526
(Pricing and Availability may vary outside
the contiguous 48 United States.)

Where to Buy
On-line No
In Stores (Store Locator) Yes
1-800-THE-SHACK Yes

This handheld scanner has an abundant memory capacity, able to store frequencies in 5500 memory channels. Plus, you can store up to 16,500 ID codes in one "working" 500 channel, 1500 ID code scanner with 11 "virtual" scanner pages of memory! This scanner follows APCO 25 digital and virtually all analog Motorola? and GE/Ericsson EDACS trunked systems. More and more cities are using these trunked systems, allowing city services to share the same set of frequencies. Conversations on these systems start on one frequency, then shift to a different one with each transmission. This scanner can follow these systems.

PRODUCT FEATURES
. APCO 25 digital trunking including the newer systems using a 9600bps control channel
. Follows analog Motorola I, II, I/II and GE/Ericsson (EDACS) trunked radio systems
. It's preprogrammed with the most often-requested systems-if you live in a major metro area, your city's system is probably already loaded
. Expanded frequency coverage picks up local marine, police/fire, HAM, VHF-air, racing, CB, weather, FRS/GMRS/MURS and virtually every other popular scanner frequency as well
. FM/AM mode
. SAME (FIPS) weather alert
. Backlit display and keypad
. Channel scan
. Alpha display can show name of service
. Continuous Tone Controlled Selective Squelch (CTCSS) and digital Disaster Communications Service (DCS) decoding
. TCXO for frequency stability; designed for new 6.25KHz channel spacing
. Frequency coverage: 25-54, 108-136.9875, 137-174, 216.0025-225, 406-512, 806-960MHz (except cellular), 1240-1300MHz
. PC interface
. Requires 4 "AA" batteries, not included

> systems
Don't see mention of LTR. Probably wouldn't bother most people but I like
to have that option. There are many in use in the Houston area.

> . Continuous Tone Controlled Selective Squelch (CTCSS) and digital
Disaster
> Communications Service (DCS) decoding
OMG! Who was typing the description of this up at Radio Shack?
Did someone do a Yahoo search for DCS and write up the first thing that came
up?
At least they almost got the acronym for CTCSS right. (Three out of five
words ain't bad, eh?)

> . Frequency coverage: 25-54, 108-136.9875, 137-174, 216.0025-225, 406-512,
> 806-960MHz (except cellular), 1240-1300MHz
I'd gladly trade in that 1240-1300 MHz for 225-400 Military AC band.

Why aren't radios coming out that can monitor the future 700 MHz band?
The radio is P25 capable, which I believe the 700 MHz band will be
exclusively. Maybe we're talking planned obsolescence, the "don't put all
eggs in one basket" marketing scheme or just plain lack of planning (or
ignorance).

I do like the PC interface and that it comes digital-ready, but for $500
smackers, I'd like to have LTR trunking too.

Wonder if it does control channel-only trunking for Moto systems.

1846. Initial report that the Pro-96 will not follow the main sites but will follow the IR sites

Yahoo group: CenTexComm
Date: 2003-09-04 04:09:47 UTC
From: Robert Barker
Topic: 1846 Message: 1846

Thanks for the nice summary. Do you know if it will follow the new APD, AFD system? Are there any plans for a base model?

Gosh, I feel like a news reporter working on a breaking story and the news and information is literally coming in every few hours.

The Pro-96 is apparently ** NOT ** tracking the two main Austin/Travis Co sites. But it is tracking the smaller IR (Intellirepeater) sites. Apparently, we are being told that it looks like the radio can be upgraded but I'm not sure when an upgrade will be available. Also I was told that you can monitor the inputs to the system to hear the units that are close to you but since you are not monitoring a control channel when monitoring inputs, it would not follow the conversations.

The ** ONLY ** way to get this radio is to call 1-800-The-Shack and ask them if it's available yet or asked to be put on the waiting list. They said they will call when they are but don't count on it. The price is $499.99 + $32 shipping + TAX, yes there is tax on shipping, so figure $575.88 I was originally told that the radio would hit the shelves on sale at $449.99 but apparently it didn't happen or it didn't officially hit the shelves yet.

It looks like Lindsay or whoever is updating the www.trunkedradio.net for Austin very often to keep to that site for updates. Also www.strongsignals.net has the latest up to the minute rumors. Both Radio Shack and Uniden will have a base model out and the rumors have it several months away.

1849. Radios Sound like Crap - missed conversations

Yahoo group: CenTexComm
Date: 2003-09-04 16:52:11 UTC
From: Robert Barker
Topic: 1849 Message: 1849

To all the EMS, Police and Fire guys out there and any other public Safety.. Be Afraid. be very afraid.

My friend got a look at the current setup linking the UHF frequencies with the 800 Mhz system. They are using a bunch of handheld 800 Mhz radios and they are patched to the UHF system. They have a box fan trying to cool this room of about 25 handheld radios at the main. He witnessed that, a lot of times, they would not simulcast (re-transmit) all the information and also that the handhelds were overheating in the room and shutting down and having to go back through the power up sequence which meant for a few seconds, there was no patch occurring while the handheld powered back up.

This is not good. It's hard to tell if it's the digital that's not working right or the link but I'm hearing a lot of references, to "I can't understand a word you are saying" or "Can you please repeat". This morning a motor unit who was still on UHF was not able to understand any of the ones that were on digital. Dispatchers are having to repeat information over and over again as units are not copying it the first time. Last night Edward sector got into a foot chase, and the communications were horrible. No one could understand anything and they kept asking over and over again to "repeat...repeat". My advice to anyone out there is that if you have the 800 Mhz radio and most of your agency is on it, then you need to be using it for safety reasons. It's too bad that EMS and Travis County was supposed to have been testing this system long before the police got it and was supposed to give feedback and let them know what was and was not working. Heck they even had a 60 day return guarantee I was told where they could have totally rejected the system altogether.

Oh well, I guess they are stuck with it. Anyway just wondering how the system sounds to everyone else and wanted to know what you are hearing.

From: Lindsay C. Blanton
Topic: 1849 Message: 1850

Robert,

Much of the issues that you speak about are related to the patches. Patches from analog freqs to digital talkgroups can be difficult to setup and voice quality can be less than ideal for patch setups. I think you'll see a drastic improvement for the officers and users when the patches are brought down and everyone is using the system in native digital mode.

Well they don't want teenagers from area high schools going to it and
tearing it up at night.

KXAN on Friday did a little spot on it. The coaches probably paid them
for the airtime. It seats something like 11,000 people. 20 and a half
MILLION dollars!!!

1868. 800 Mhz Radio System Crash

Yahoo group: CenTexComm
Date: 2003-09-10 13:26:08 UTC
From: Robert Barker
Topic: 1868 Message: 1868

Yesterday, Tuesday about noonish, the APD system UHF and 800 Mhz crashed. Does anyone have any more info on this and what happened? As I understand it from the pages, the units on 800 Mhz were unable to talk to dispatch and the units still on UHF (460's). Did it also happen with EMS and Fire? I guess for about 10 minutes, dispatchers had limited or no contact with their units.

1871. pretty rainy for Thursday night and Friday morning

Yahoo group: CenTexComm
Date: 2003-09-10 19:32:18 UTC
From: Robert Barker
Topic: 1871 Message: 1871

Sorry I wouldn't normally post weather stuff but when it comes in from the National Weather Service as a heads up. I figure you might want to know.

All,

I'm hesitant to put out another "heads-up" message since the one about Tropical Storm Grace flopped so badly. But, it's starting to look pretty rainy for Thursday night and Friday morning and I believe we need to get ready.

The weather maker is a cold front currently moving southeastward from the Denver area. It should cross into North Texas tomorrow afternoon and enter South Central Texas tomorrow night. Accompanying the front will be multicell thunderstorms, frequently in lines. This leaves open a possibility of some large hail and damaging winds Thursday night, but the severe events are expected to be very isolated. The real threat would be heavy rainfall, starting late Thursday night and continuing Friday morning. At the moment, it appears we could see the rain ending from the west Friday afternoon.

Soils along and east of I-35 are still wet, so 2 inch totals in three hours could produce flash flooding. Our rain estimate for the east is widespread 1 to 3 inch amounts with isolated accumulations to 5 inches.

West of I-35 would probably require 3 or more inches in three hours to start flash flooding. Our rain estimate for the west is widespread 1 to 2 inch amounts with isolated accumulations to 3 inches.

As always, our forecast discussions are available at:
www.srh.noaa.gov/data/EWX/AFDSAT

Our hazardous weather outlooks are available at:
www.srh.noaa.gov/data/EWX/HWOSAT

Our forecasts are at: www.srh.noaa.gov/data/EWX/ZFPSAT

Call us if you have questions or concerns.

1872. A day of remembrance... (I'll apologize for the cross-posting up front)

Yahoo group: CenTexComm
Date: 2003-09-11 03:01:46 UTC
From: Michael Schadone
Topic: 1872 Message: 1872

Two years ago, minus one day, 92 people at Boston's Logan International Airport stepped aboard an American Airlines passenger jet, Flight #11, that was about to take them to Tinsel Town, Los Angeles International Airport. And, another 65 step onto United Flight #175. That same morning, 64 on American Airlines Flight #77, and 45 on United Airlines Flight #93 all stepped into a horrific ride where heroes will be unknowingly born.

This particular morning, 3 airliners carrying a total of 221 people were about to end the lives of 3,016 Americans, including 200 FDNY firefighters and paramedics, 78 NYPD officers, and countless office workers and visitors. The Word Trade Center and the Pentagon took the brunt of the pre-planned strike. And, a meadow. Many of the 45 passengers and crew on Flight #93 were able to make their final calls home to say goodbye. They were going to take over the plane, but by God, they were not going to be a party to the killing of any more Americans. They were going to crash the plane, and they did.

At 0845 EDT, Flight #11 (Boeing 767) crashes into the North Tower of the World Trade Center.

At 0903 EDT, Flight #175 crashes into the South Tower of the World Trade Center.

At 0943 EDT, Flight #77 (Boeing 757) crashes into the Pentagon.

At 1005 EDT, the WTC South Tower collapses.

At 1010 EDT, Flight #93 is forced down into a field in Somerset Cty., PA by the passengers.

At 1028 EDT, the WTC North Tower collapses.

At 1720 EDT, the WTC Bldg. 7 collapses

I remember the first public safety official that I spoke with that morning. It was my boss. He was intent on complaining to me that he needed someone to cover a few shifts because one of my coworkers "just upped and left to go to NY" with RI-DMAT and he would probably be fired. It shamed me. It also made me come to the realization that we need to take care of each other. I was planning a run down Rt. 95 to the NY-CT border with my dash light firing. My intent was to run calls for one of the systems that dedicated all of their trucks to NYC. After that phone call, I knew what I had to do. I told my boss, in no uncertain terms, that I would cover each and every one of my coworker's shifts for the entire time that he was gone. And, I would give up the overtime pay to do it. It was a time to band together and get through this. To ensure that my employer realized how serious I was about this endeavor, I told my dispatcher that I was out of service for a lack of

essential equipment, The Stars and Stripes. I got no argument, and in fact, by that afternoon, every employee had handmade ribbons on their uniforms and two U.S. Flags on each bus. We all held our heads high until our co-workers came home.

EMS in RI was struck another blow when we found out that a local ER worker, Carol Bouchard, was a passenger on Flight #11.

3016 people lost their lives that day. If we all give each of them a second of our time, it will only amount to 50 minutes and 15 seconds. I know that I plan on remembering each and every one of them and honoring them for another second each. I feel that it is the least that I can do. And, while I am thinking of those that will never hug their kids or have dinner with their parents or enjoy their spouses, I will be thinking of those that are serving this country to ensure that this type of atrocity doesn't go unpunished. Those that have died, those that will die and those that will be able to return home.

Thank you for your time.

Michael Schadone, NREMT-P

1873. Lear Jet?

Yahoo group: CenTexComm
Date: 2003-09-11 23:48:52 UTC
From: Catherine Keller
Topic: 1873 Message: 1873

This morning, just on a whim, I brought my hand held scanner to work. Around 7:00 ? 7:45 am, I heard a transmission that?s had me wondering ALL day long and wondered if anyone else heard it?

I heard a male voice talking about a Lear Jet? it was noisy in our office, so I didn?t hear all it clearly, but what really caught my attention was they?d asked how many ?souls? were on board? the answer was 20. It almost sounded as if there was an engine fire.

Was I alone in hearing this this morning? If not, anyone know what happened and where it occurred?

1874. A few notes on the Pro-96

Yahoo group: CenTexComm
Date: 2003-09-12 02:09:26 UTC
From: Robert Barker
Topic: 1874 Message: 1874

I have been playing with a Pro-96 for about a week now. As has been discussed, the 2 Simulcast sites listed at:

http://www.trunkedradio.net/modules.php?name=TRSDB&sid=2

Are of the Phase 2 type trunking and you will be lucky to hear a few words, before they are totally garbled. The Intellirepeater (IR) sites do seem to work a little better but you cannot depend on an IR site as a unit will travel in and out of that site during a single conversation. I'm used to seeing more frequency hopping but that is not so with this system. If you monitor Williamson County's System or LCRA, you will notice that the frequency changes every time they let go of the microphone and someone else talks. On this system, If I hear someone talking, I can pause on that talkgroup and if I'm lucky enough to hear the entire conversation, It will probably all be on that same frequency. I also put the input frequencies that they are actually transmitting on and am surprised that they will generally only use like the first 5-10 channels of a system. Downtown monitoring the inputs, you can hear the whole conversation which I guess is because i'm hearing the Handhelds retransmitting the other band's signal over to the 800 MHz System.

I have been trying to update the above website which what channels I'm hearing. I'm getting a lot of private emails as to what the talkgroups are on the list as opposed to what is actually listed with the numbers. The Talkgroups that are listed are what people in the city have been nice enough supply us with showing the talkgroups that have been set up for their system. There are so many city agencies, that who knows If I will ever have them all. I haven't even begun to hear the trash people yet. I'm trying to focus in on the stuff that we'd want to monitor the most. So by knowing the talkgroups, I can set the scanner to search talkgroup ID's by number and match them up with that channel. For instance, When Travis County Sheriff's Dept says: "Go to West Tac" and they show up on a talkgroup, then I know that talk group is West Tac for TCSO. Unless they say what channel they are on, it may be hard to capture everyone. For instance, EMS has MedCom, Central, South, West and North, but until they use them all, I don't know what ID goes with what group. I hear ambulances talking to Seton NW but I don't know if I've found the Seton Talkgroup or the Hospital All talkgroup.

Anyway, the radio does need to be improved before it can totally decode Austin's digital trunking. As for some of the patches. As long as EMS insists on having voice pagers, I guess they will continue to Patch to 462.975 and as long as there are volunteers out there on High Band, then they will continue to rebroadcast Fire Net on 153.950 and EMS County on 155.715. Things get so busy on those channels that they almost need other channels for both Fire and EMS county first responders.

Does anyone have specific questions about the radio? I have pretty much focused only on Monitoring Austin's new system. I have not heard DPS on the 159.2125 that we though they might be using or Leander or FBI or anything like that.

Catherine,

I was working on M04 and got dispatched to ABIA that morning at about 7:30 for an ALERT-II (which means an aircraft with a problem that could cause a crash... Alert-I is minor problems and ALERT-III is an actual crash). We only responded for about two miles or so and got cancelled. That means that the craft landed safely.

I am not sure that this is the same issue that you heard, but in all probability, it was.

ALERT-II's are as common as colds. That's a good thing. Everytime a pilot thinks he "might" have a problem, it activates an ALERT. That allows everyone to be there in case something does go wrong (which it almost never does... statistically speaking, or course).

The most dangerous part of air travel is still the drive to the airport!

DPS Capitol's frequencies are digital only on 155.445 for the DPS
troopers working in the capitol and capitol extension. You can hear

the troopers that patrol downtown on 155.445 and DPS non-commissioned security on 460.125.

1882. Hays County Frequencies - need updates

Yahoo group: CenTexComm
Date: 2003-09-13 15:05:40 UTC
From: Lindsay C. Blanton
Topic: 1882 Message: 1882

Hi Folks!

In an interested to learn a little more about Hays County and all of it's public safety communications, I've pulled all the FCC licenses countywide and consolidated them into the below. I've then scoured numerous sources to ID frequencies in use by every agency in Hays County.

For the licenses that I don't have identified, I could really use some help with. Now that I travel through Hays County at least twice a week on the way to Austin, I could really use the help. Does anyone see anything below they can ID? Can anyone add PL Tones etc to what I have below?

Thanks!

Are there any live scanner feeds in the central Texas area?

1887. 2002 Austin City Limits frequencies

Yahoo group: CenTexComm
Date: 2003-09-19 15:48:17 UTC
From: Robert Barker
Topic: 1887 Message: 1887

Austin City Limits Music Festival Frequencies heard LAST YEAR during the 2002 Festival:

(might still be good)
461.3125
461.3375 very active involving moving artists to stages
461.3875 not sure if this was active or used nearby
461.4375
464.500
464.550
465.6875 2nd most active channel
466.0875 Security and Medical Control Ch 4?
467.2125
469.500
469.550 Police Ch 5?
453.325 Parks 1 can hear park police and parks all over Austin
460.500 APD ch 8 was being used some but just tonight Parks Police seems to
have switched to
460.025 APD Ch 7 they are using tonight
of course the media freqs are active and especially News 8 on 859.8125

I got close enough to see a label on a handy talkie. there are 18 channels.
every stage has their own channel. the first few are for main event staff,
operations, trash, etc..

1889. 155.085 - Kerr County Sheriff

Yahoo group: CenTexComm
Date: 2003-09-20 22:29:57 UTC
From: Daynes
Topic: 1889 Message: 1889

When north of San Antonio I am receiving a repeater with police comms on 155.085. FCC records indicate Kerr County Sheriff. Is this correct?

Thanks.

1892. San Antonio EDACS System Key (ESK)

Yahoo group: CenTexComm
Date: 2003-09-26 20:04:05 UTC
From: Lindsay C. Blanton
Topic: 1892 Message: 1892

Hey Folks,

I've got some really bad news, but it appears that over the past 2 days, Dailey Wells and the City of San Antonio have implemented EDACS System Key infrastructure on the new Bexar County / San Antonio EDACS ProVoice system. EDACS System Key (ESK) encrypts the control channel, disabling any known EDACS scanners or unauthorized radios without the encryption key from tracking the control channel.

This is certainly bad news for ALL scanner listeners in the San Antonio Metro area, because this effectively insures that there will be absolutely, positively, no possible way to monitor any communications, analog or digital, for any public safety agency in Bexar County / San Antonio.

It is also important to note that this will be the first known instance of any local county and city agency implementing a totally closed system cutoff from public monitoring.

The system does have analog components in addition to ProVoice digital, but it will be impossible for anyone to monitor any communications on the system without an EDACS system key enabled MA/COM portable.

They have been switching the control channels between EDACS ESK and the standard EDACS control channel, but as of 3:00 PM CST in San Antonio all the control channels are now encrypted.

1893. Re: [CenTexComm] San Antonio EDACS System Key (ESK)

Yahoo group: CenTexComm
Date: 2003-09-27 03:26:54 UTC
From: M.D. Boyer
Topic: 1892 Message: 1893

Dear Lindsay:

While I'm still learning all of the techniques, protocols, and jargon of scanning, I savvy what you're saying in the email on S.A.'s new radio silence.

Each time I hear about government attempting to cloak itself, my blood begins to boil...

This may be of little interest to the general public (until they hear about it, perhaps), but it may be high time the scanning hobby begins to think about a class-action lawsuit, and not just for the cats in S.A. either.

I'm also not a constitutional lawyer, but I have spent more time learning about how that document (and others) came into being and on this subject, I probably know as much as many of the prolific authors who've written on the topic. Certainly more than any college kid these days, not to mention something slithering out of high school. And it's times like these that a fundamental ignorance of who and what America was really meant to be is the most costly. In fact, failure to challenge and check government by the people of a constitutional and democratic republic is at least as dangerous as any terrorist going.

With that said, here's what the framers basically had in mind (especially when it comes to police powers):

1. The people are sovereign over everything.

2. Government has no purpose save the protection of liberty of and for the people.

3. Government may not exclude the people from access to any activity it engages in, except on the
express permission of duly elected representatives or by the people directly.

4. Law enforcement, like any other activity of government, exists to protect liberty.

5. Law enforcement, like any other activity of government, exists at the pleasure, and by the permission of the people. To have a society of laws, rather than men, the people voluntarily surrender some of
their unlimited rights within a state of nature. Collectively however, the people may reclaim these
anytime their social contract with government is breached.

6. In America, the public owns everything not in private possession (i.e.coastal waterways, public lands,
and the airwaves, just to name a few). The people, vis vis the law, promulgated by and through their
elected representatives, decide what shall constitute legal private ownership.

7. The people, therefore, are ultimately responsible for everything, and as such are entitled to decide
what level of direct oversight they shall have. Government's job is to take it's direction

from the
people (or their duly elected representatives) as the people shall determine.

Now, some could argue the extent to which the people should be directly involved in managing their
government. Others might argue that some aspects of government are so sensitive that a certain level
of secrecy is warranted. However, if we really want to have the society hammered out in Philadelphia, we must be constantly weary of any attempt by government to shield it's workings from the people. And we must always remember, that while the framers did create the structure of government and delegate some powers to component parts, they kept the ultimate power in the people collectively. For it is the
people (following a scripted process) who may change their Constitution or even abolish it, and not the Constitution that may change or abolish the people.

Therefore, if we want full access to the public service airwaves, as the rightful owners, monitors, and limiters of government power, we need only make the case for it.

I agree wholehearted with you Mr. or Mrs. Boyer. The government is here for YOU AND I. They are not here just for themselves. We need to remind the fat cats upstairs that they work FOR us not against. I am with you on everything you have said. We should start a petition now or something where it will get their attention or else it will happen it it will not stop in just SA.

Does anyone else think this is a problem of any kind?

I know one way to hear their radio traffic if it becomes encrypted: barrow a radio of theirs.

1895. Re: [CenTexComm] San Antonio EDACS System Key (ESK)

Yahoo group: CenTexComm
Date: 2003-09-27 05:56:45 UTC
From: Nicholas McLarty
Topic: 1892 Message: 1895

I have a mixed opinion on the subject, so I will present them each for public consumption:

I am the communications supervisor of a law enforcement agency in San Antonio. Not being an agency participating in the new EDACS system, I doubt we'll be getting access to EDACS radios when they are put into use. So in the end, I will be in the same boat with the general public in that I will lose out on any SAPD radio traffic that takes place. As it is, we rely heavily on monitoring SAPD traffic to adjust our response to incidents where SAPD is involved.

On the other hand, I am the communications supervisor of a law enforcement agency in San Antonio. As such, I understand the need for communications security. Scanners have been an increasing tool used by criminals to aid in their commission of crimes and evasion from law enforcement. In the worst case, using the current homeland security rationale, scanners can be used by terrorists to coordinate attacks on public safety personnel. While I agree with the points addressed of government and public safety existing to serve the needs of the public, our basic necessity is for self-preservation and security. Unfortunately, that requires actions to be taken such as encrypted communications.

It sucks for me just as much as everyone else, but the reasons need to be understood.

A rebuttal from me quickly popped into my mind.

GUNS. Aren't they almost always used by a criminal? Does that mean you are going to ban guns because a stupid foolish criminal chooses to do something that endangers a citizen? It best not. This is going off on a different tangent but follow me. Its not really about some criminal who uses a scanner to find out when the cops are closing in on them. Its not really about the scanner hobbiest who helps the LE out by alerting the nearby officer that the suspect took a left on some street. Its not about the wanna be paramedic listening to the EMS radio traffic learning the jargon. Its really about command and control. Why don't we just all agree this is the best thing "for the children" that always works for almost anything else.

if I insulted anyone here, I am sorry. My intentions are never to insult anyone here and I am very sorry if I have done so. I just want people to think.

Thanks for your time,
sean

You're right, but the only difference is -- guns are constitutionally protected. Scanners aren't. It's the same principal of cellular phones. Anybody can have a scanner that can monitor cell phones up to the point where cellular technology prevents that from happening. Of course, those advocating open monitoring of police communications can start trying to articulate they should be able to monitor cellular phones used by police agencies. It's the same line of reasoning -- just consider EDACS radios really expensive cellular phones.

From: Myles Barkman
Topic: 1892 Message: 1898

What is it about San Antonio that among all the thousands of law enforcement agencies in the country, dictate that they, in particular, require this level of encryption?

Are they going to do a study to show that this added expense resulted in saved civilian lives, officer's lives, property, and thwarted terrorists?

How much more complex does this make their communications system? When they use this type of encryption, is voice inteligibility altered (not that anyone here without one of their radios could really answer that, except in theory)?
Is the system reliablity affected adversly because of this new encryption?
How robust is their communications system anyway? Is there redundancy?

Before adding all these levels of security to communications systems, public safety agencies need to make sure they are dependable, redundant, and can function to some extent when all the primary and backup systems go down.
But 800 MHz simplex just doesn't carry that far.
They also need to make sure they have interoperability features that their users are TRAINED on and actually work.

They also need to have reliable dispatch centers with trained calltakers, and dispatchers that can talk to one another.
Houston just crapped in their drawers when they switched to this new dispatch center housing all the public safety agencies in one building, changed their dispatching software, and implemented an automated fire voice dispatch system, all at the same time, without adequate training of all users involved.
Many of the officer's MDT's can't seem to connect now, and the computer voice on the fire dispatch frequency sounds like the early versions of NOAA weather radio.

Public safety could do alot more to provide safety to civilians, themselves, and be more efficient if they worked more to improve their training, procedures, and computer systems, instead of keeping a couple of crooks from hearing mostly boring calls.

Based on the last plans I heard, the 'routine use channels' are analog while the more tactical/special operations channels are digital. For those that are analog, if encryption were to be used on the voice channels you could recognize that someone is talking but it would sound unintelligible. For those on digital, it would sound as if it were a data stream. Now, encrypting the control channel means that no EDACS trunk-tracking scanner will be able to follow a particular talkgroup as it hops channels. But, if the analog channels are not encrypted (who knows until it actually happens), then conventional scanning could still be applied. However, if they are going through the expense of encrypting the control channel, thereby requiring every radio to be encryption capable, then what's to say every channel won't have encryption.

On the dispatch side of things, the new center hasn't changed operationally... SAPD still has their own center, SAFD still has their own (although it's right next door instead of a floor away), and BCSO is relocating to another new center. Everyone's still staying physically separated, although being on the same CAD system will provide for immediate communication. What does this do for outside agencies? Not a thing. From the technical standpoint, the system architecture looks to be very survivable. The software is off-the-shelf from a very reputable vendor. The city and county has engineered a very good redundancy plan in the event one or more of the centers become unusable.

As for the new MDCs, all of the connection problems are primarily on AT&T's end, not necessarily the city. So it's more AT&T that needs to get their issues in order.

>>>>>>>>>>

Lindsay,

It has been years since I worked for Motorola. I installed some early SmartNet trunking systems for PD/FD/PW up in the DC area. This was back in 1988-1992. Almost no one had a scanner that would track trunking then except for a few of us who built our own STX radios and put in the proper info. One trick many scanners used was to setup the 5-7 separate receievers and monitor all of the repeaters in the trunked system. This made for a bit of confusion but with a bit of practice the various conversations could be followed, especially given the controllers wont to stick with one repeater for at least 30 seconds before reassigning it.

I got out before the digital systems hit the commercial market so I may be completely wrong with this but can't the ESK controller be defeated by using a digital capable bank of receivers? You'll certainly miss the assignments but you should still be able to pick up the transmissions. I can't see the city encrypting all of the PD/FD fleet as it would take forever to ensure everyone was on the same code. (Unless they've figured a way to send the encryption key out over the control channel).

I'll be the first to admit that the above is about as unwieldy as it can possibly be. However, I think that scanners are still not entirely locked out of the system.

1903. Re: [CenTexComm] San Antonio EDACS System Key (ESK)

Yahoo group: CenTexComm
Date: 2003-09-28 01:01:46 UTC
From: M.D. Boyer
Topic: 1892 Message: 1903

Dear Mr. Mc Larty:

While it is certainly true that firearms are specifically protected for both organized militia, as well as to the citizenry (the correct interpretation based on the founders own verbatim and recorded reasoning), the Constitution also specifically states that the document in no way prohibits all other rights and powers not expressly mentioned. These are, as they said verbatim, ultimately reserved to the people.

For example, any 1st year law student could argue the inherent right to privacy each U.S. citizen enjoys from the federalist papers alone, not to mention from the Constitution. And lest this right ever be doubted, it most certainly can be expressly added to the Constitution by amendment. Such an amendment however, would be superfluous.

The blocking of cell phones themselves turned upon this engrained "right to privacy", which I support.

However, with regard to government activities, they may not be squelched without sufficient cause, and especially not without express permission from the people vis a vis their duly elected representatives. There can be no argument on this point. Constitutionally, the people are sovereign, and if they choose to open even the Pentagon, large numbers of citizens could do so legislatively. It is their right. The city of San Antonio is on dangerous ground here for two reasons: first, it arrogantly took upon itself privileges apparently without permission, and secondly, it spent (or is spending) public money to do so. In both cases full disclosure to the public, an independent and federal judicial assessment of the proposed action, and possibly a public referendum is/was in order at the very least. I've heard nothing to indicate that any of this has transpired...

Using your reference to "guns" as legitimate constitutional privilege, as opposed to a cell phone for example, is only valid if the correct premise is in mind. As I have pointed out, cell phones are "privatized" lately precisely because of the application of the right to privacy embodied in our Constitution. It has nothing to do with technology, except that recent technical innovations (within the last 20 or so years) has made it possible to eavesdrop on a private conversation. The conversation is protected, private speech. The cell phone only happens to be the vehicle with which the right is being exercised, and nothing more. The future holds many technological challenges for each of us. They however do not have to be Constitutional challenges as well.

On the other hand, and continuing with the cell phone model, law enforcement, like any other branch of government, has no right to privacy whatsoever. That a "criminal" or even a "terrorist" might overhear something on a scanner notwithstanding. If an officer uses a cell phone for official business, it ought to be a monitorable transmission. And if technology can be used to block a private citizen's call, it most certainly can be developed to allow the monitoring of official business calls. In fact, creating a system of "tags" or "i.d.'s" that a scanner could track would be a far better use of public funds, and would also be fully inline with the framer's Constitution.

Naturally in times of war, certain restrictions on public liberty may be wise and warranted. But in all cases, the public at the very least must be consulted, and all efforts to minimize such restrictions should be exhausted first. I would argue that even with the events of September 11th, we are still a long way from drastic measures. If government fears so much for the people's safety, it should instead use scarce public funds to seal/ secure our nation's borders, and evict illegal immigrants. This long-overdue action could add a significant measure of security to the nation, while finally enforcing the laws of the land instead of looking the other way. This action may even stimulate the country economically. It must always be remembered that the "terrorists" of 9/11 either came here illegally or stayed here illegally, and no one in law enforcement was the wiser. Impeding and stifling our Constitutional rights in the guise of public safety, while not enforcing already available and extremely necessary laws (like immigration laws) reminds me of the high schooler buying the mag wheels before he has the old wreck he just bought actually running.

Finally, because the public is sovereign in America, the framers understood the need to guarantee to the master his/ her tools with which to supervise. It made no sense to empower the people to defend themselves from the evils of despotic government without at the same time guaranteeing them self-protection (today with guns, tomorrow with phasors). Likewise, it makes no sense today to guarantee the public ownership of the airwaves without also guaranteeing technological access to monitor them. This supervision is most wise and constitutionally mandated. The scanner is only a recent tool.

The actions of S.A. to block access to public frequencies (law enforcement or any other agency) are ill-conceived, unconstitutional (in my humble opinion), and should be challenged by the citizenry (not just the scanner enthusiast). Any court truly mindful of our Constitution would quickly issue a cease and desist order effective immediately, I'll wager.

Respectfully,

M.D. Boyer

You're right, but the only difference is -- guns are constitutionally protected. Scanners aren't. It's the same principal of cellular phones. Anybody can have a scanner that can monitor cell phones up to the point where cellular technology prevents that from happening. Of course, those advocating open monitoring of police communications can start trying to articulate they should be able to monitor cellular phones used by police agencies. It's the same line of reasoning -- just consider EDACS radios really expensive cellular phones.

A rebuttal from me quickly popped into my mind.

GUNS. Aren't they almost always used by a criminal? Does that mean
you are going to ban guns because a stupid foolish criminal chooses to
do something that endangers a citizen? It best not. This is going off
on a different tangent but follow me. Its not really about some
criminal who uses a scanner to find out when the cops are closing in on
them. Its not really about the scanner hobbiest who helps the LE out
by alerting the nearby officer that the suspect took a left on some
street. Its not about the wanna be paramedic listening to the EMS
radio traffic learning the jargon. Its really about command and
control. Why don't we just all agree this is the best thing "for the
children" that always works for almost anything else.

if I insulted anyone here, I am sorry. My intentions are never to
insult anyone here and I am very sorry if I have done so. I just want
people to think.

Thanks for your time,
sean

From: Nicholas McLarty
Topic: 1892 Message: 1904

Mr./Ms. Boyer:

The points you touched on are true, correct and predominantly leave no room for debate. I used the gun comparison simply to argue the idea of scanners vs. guns and as an example that guns are explicity addressed in the Constitution where governmental communications are not. You are correct in your point that the government serves at the leisure of the citizenry as a whole, and oversight of the government, to include recordings of radio traffic, supporting documentation, etc. is available to any citizen who chooses to exercise that right (Open Records Act). Immediate access to government communications is not necessarily supported as public oversight of their government (Section 522.108, Texas Government Code, dictating exceptions of certain law enforcement information related to detection, investigation, or prosecution of crime)

Now, let me present this thought to you as a comparison for legitimacy and constitutionality of San Antonio's situation versus others in existence:

A vast majority of Federal communications have become encrypted -- FBI, military, secret service, etc. etc. A good deal of state agencies (Texas DPS among them) are entering the encrypted world. Certainly if the arguments you present in regards to San Antonio were valid on the grander scheme, why haven't these agencies' encrypted communications been shut down thus far?

It is for this reason that all government communications subject to the Open Records Act are recorded. Anyone with an interest in these recordings can request a copy of them from the appropriate agency. Therefore, any sensitive information can be (and probably will be in the future) encrypted as technology in the field increases in scope and practice. As long as a citizen can obtain an unedited copy of either the transcripts or the recording, itself, it is not a breach of law.

That being said, I do wish that these agencies only encrypt that communication that is sensitive. By encrypting the entire system, you lose public interest in the organization and also support (budget time!).

1911. 800 Digital system sucks!!!!

Yahoo group: CenTexComm
Date: 2003-10-01 21:08:17 UTC
From: Robert Barker
Topic: 1911 Message: 1911

Yes I have heard the same thing, that the system is having problems. It's like my cell phone, when it works it works great but when it doesn't work it's a mess. I'm not sure what's going on but the Digital system is very distored as I'm hearing lots of references to "I can't understand a word you are saying" or "can you repeat" over and over. That's great for us but bad for them. They (TCSO, EMS and Water/Wastewater) had 60 days to test and reject the system but noone spoke up. Also their CAD has been crashing like crazy. I don't know if it's related or if it's the old or new system that is crashing. Oh well.

Topic: 1908 Message: 1912

the city of austin requires a franchise license/permit to operate a private ambulance within the city limits of austin. there is a process that involves a/tcems evaluating parts of the service and other city departments? determining need, etc. i suspect that san antonio is like dallas in that you just pay for a permit and away you go.

Not directly related, but does anyone know why San Antonio has so many, many more private ambulance companies even disproportionate to its larger size? Are they regulated differently or is there just a greater need?

1915. A Pro-96 Scanner here in Austin, slightlly used

Yahoo group: CenTexComm
Date: 2003-10-03 03:19:05 UTC
From: Robert Barker
Topic: 1915 Message: 1915

Well with deep regret I returned the Pro-96 scanner back to a local Radio Shack. Frank, from Pflugerville had it before I did and then I went and put it on my credit card.. decided to try it out for 30 days and it just is not decoding all the trunking. It does work fairly well on the inputs and works great in the downtown area, hearing all those closet radios at the main but it just wasn't worth spending $500 for. I had it for the whole month and I was able to update as many talkgroups on www.trunkedradio.net as I could but my 30 day return policy was coming to an end so I had to give the radio back. If anyone else wants to go get it and play with it, email me and I'll let you know what Radio Shack has it. I left it programmed for Austin and was using the Win96 program for programming it. Also if it's any incentive, Radio Shack just introduced a new promotion with their own MasterCard where you get $15 off your first purchase and then you get like 2% points toward (or what amounts to $10 toward a $15 credit on the card)

The website should explain it:
http://www.i-radioshack.com/mk/get?_EC=1IE4GdXeuiIRo_EoOXANEU

I'm hoping there will be news of an upgrade for the Pro-96 soon or else the Uniden scanners will come out instead. I prefer Uniden over Radio Shack any day.

From: Sean Farrell
Topic: 1892 Message: 1917

I was just wondering if we are finished with posting anything more or we could discuss all the unconstitutional branches of government there is these days. Like the HOMELAND SECURITY branch. That name just scares me. Just remember, slavery is free. Freedom comes with a price. (the price of your forefathers dying to stop a tyrannical country from taking all your rights)

I'll leave with this quote from BF himself:

They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety.

makes you wonder...

From: M.D. Boyer
Topic: 1892 Message: 1918

Dear Sean:

No...I'm hardly finished with the Constitution, or the applicability of it's tenants to the S.A. public service frequency blackout.

The truth is, there is so much abuse of power by our various bodies of government, that it is hard to know where to begin sometimes.

I'll have more to say on the S.A. topic, as well as others, in the future.

I believe it bears noting however, that I do not see conspiracies behind every bad move government makes. It remains the case that our own collective ignorance and apathy is by far the greatest danger to
our democratic future. To be sure, there have been, and are, bad actors out there which must be monitored, confronted, and stopped. But to do this, we all have to do our homework first. And that means laying off the crap on television and other popular media, and instead pick up a textbook. Compared to what the founder's generation knew about history, mankind, and the law (and I'm talking about the farmer in the field, too), we know nothing.

And this is the 21st century.

That said, and it cannot be overemphasized, with mastership comes stewardship. The American people cannot simply hire a maid to keep a democracy vibrant. The business of a constitutional republic is arduous and very messy. Off-the-cuff opinions are carcinogenic. Well read, researched, and thought out positions are priceless (and rare). Too much of the former, and you have the status quo. More of the latter, and we have a powerful future. It takes work to be in charge. To be successful, each generation must be willing to keep both hands dirty. And each ensuing generation must learn all that's happened up to their time, and a whole lot more. To be blunt, freedom isn't free, and it never will be.

More soon.

1925. Tony Burger Center Frequencies

Yahoo group: CenTexComm
Date: 2003-10-04 16:57:33 UTC
From: Mark Summers
Topic: 1925 Message: 1925

I am going to the Capital City Marching Festival this afternoon at Burger Center and was wondering if anyone has the stadium frequencies and/or frequencies used by any of the competing bands.

1926. Firecomm /Blue 2 is not simulcasting 453.15 and SWAT is not on SWAT.

Yahoo group: CenTexComm
Date: 2003-10-06 00:59:28 UTC
From: Robert Barker
Topic: 1926 Message: 1926

WE are starting to have a problem with this.. AFD is not on 800 Mhz yet and Firecom/Blue 2,3,4,5,7 and 8 are not being simulcast. That means if EMS goes on a fire standby and the fire dept is on any one of those firecomm channels then EMS cannot talk to them on their 800 Mhz radios.

The last 2 swat callouts were worked on Critical Incident 1 because someone also decided that I guess EMS and possibly the regular patrol units did not need the SWAT talkgroups.. So unless something changes.,.. I think there will be many talkgorups that will never be used.

EMS is having to pass up EMS Command N to get to EMS Command Central.. they should use Command N since it's only one button click away.. .. either that or rename those talkgroups to EMS tac 2, EMS Tac 3, etc.

1930. Gosh what else could happen this morning

Yahoo group: CenTexComm
Date: 2003-10-06 17:07:51 UTC
From: Robert Barker
Topic: 1930 Message: 1930

Man what else could happen:

Started off with a Bank Robbery at Bank of America 1144 Airport Blvd.

I'm still not clear on the PURSUIT but APD motors heard a call of an abduction and they initiated a pursuit from William Cannon and I-35 down to Buda where apparently they lost the vehicle

Then they found a Mother and her 5 YO son stabbed to death at The Woodland Heights Apts 8312 N IH-35 which they are treating as a Homicide

Then a pinin collision on FM 1431 @ Trails End Rd. resulting in a DOS female.

and that was just for this morning.

We are not in a small town anymore.

Robert,

I don't think that's everything, though... I heard something really strange this morning around 3:45 - 4 am. There was a call saying a woman had called about her husband having been forced into a car (I assumed theirs, since she supposedly saw it) and officers were on the run looking for the car. Shortly after that, I heard an officer say that a car had crashed (and here I'm not clear if it was Stassney or Slaughter - I confess I was on the fuzzy side at that time of the morning!) and they were going to have to cut someone out of the car. The car was on its roof, the person in the car was kind of suspended by their seatbelt. I heard the dispatcher ask if he was the only person in the car and never heard if the person was the driver or a passenger... but it was a weird beginning to the morning!

1934. Austin Digital TRS Update

Yahoo group: CenTexComm
Date: 2003-10-12 05:12:38 UTC
From: ExLngHrn@aol.com
Topic: 1934 Message: 1934

APD dispatch and 911's move-in date to the new center on 51st Street has been moved back to November from October 12.

As of tonight, the UHF patches are still up.

Sporadic reports from public safety personnel that the radios sound garbled.

[Non-text portions of this message have been removed]

1936. Can APD's Air 1 Hover over a scene? I mean does it depend on how much wind or is it a skill

Yahoo group: CenTexComm
Date: 2003-10-19 02:53:11 UTC
From: Robert Barker
Topic: 1936 Message: 1936

Friday night a man either stole or attempted to steal a car at the South Point Nissan on the motor mile on I35 south of Ben White.. he got into a scuffle with a security guard from the dealership and the suspect ran to the field behind the dealer . Air 1 and K9 were called and it wasn't long before Air 1 had the suspect sighted on his infrared.. but what happened next was so bizarre that I'm extremely confused. Air 1 proceeded for the next hour to try and direct units into the field to find the suspect and he kept running from them and eluding capture.. I was not understanding why it was so hard to capture someone in an open field with dogs and a helicopter.. I mean they went at it for about an hour.. I was mobile so I passed through the area and pulled over to see that Air 1 kept circling the scene over and over and they would see him and then they would lose him.. I do not understand why they kept circling.. .. can they not stop the helicopter and hover over the field and light him up and keep the light on him until the officers and K9 can come and get to him???. They had the entire field surrounded and he never left the field but they kept circling and circling and I was getting dizzy just watching Air 1 fly around and around.. Is it only a more experienced pilot that knows how to hover over a scene? .. or perhaps there was just too much wind Friday night.. I don't know but I have never seen so much time wasted.. I don't know how much jet fuel costs but they were circling this field for like an hour and they tried over and over again to direct the officers to the suspect but the officers would get so close and he would say move to your right.. no now go to your left no .. now walk forward 20 more feet.. they finally just gave up and called the whole thing off.. Meanwhile, all the calls in Frank were held and they tried to hold the air (not like they don't have TONS of other talkgroups to move this operation to), or to have regular Frank Calls be put on another talkgroup.. it was just a mess.. Was this cost of doing this for an hour worth the crime that was committed?

On cops.. (and yes I know that's TV) but on Cops the helicopter will spot the suspect and keep the light on him and they will keep the light on him until the police can get to the suspect.. I don't know why this was so difficult..but it seems like APD just doesn't know how to do it.. I think STARflight is much more capable of this work then Air 1. It seems that all they do is fly around the city .... do other cities have helicopters that no matter where they go, they keep their spotlight on?.. I mean.. it's not always shining on anything specific ..they just will fly across town with the light on. This seems like a big toy for them but I'm very disappointed that it has not be very effective at all. Air 1 seems to be unavailable 70% of the time and even when they are in the air.. it's like they are just out to have fun.

Waco Police has a helicopter; and they actually use it.. I was passing through Waco about a week ago going to Dallas and they were using it to spot flooding and people stranded during heavy rain.. oh and they can even fly in the rain.. Waco has like one main police channel.. wow.. they have money.. (must be from Bush and the Crawford Ranch).

ok I'm done. :)

Did anyone else hear this fiasco?

From: chris-howell
Topic: 1936 Message: 1937

helicopters don't like to hover, if thehy have a malfunction, they drop like a rock with very little chance of recovery. however, if they are always making some sort of forward motion (that is forward movement related to the nose of the aircraft) they can autorotate and stand a much higher rate of success in the event of a failure. from talking to some of the starflight pilots (and from recalling my navy days when i was in a helo squadron), hovering is something that they will avoid like the plague if at all possible.

as to experience, i've heard that a lot of the apd pilots are low on hours, some of the surrounding cities still call starflight vs apd because of the experience issue.

maybe keeping the suspect in your sights while circling around takes more practice than they have yet had. from listening to some starflight law safety assist calls, they seem to keep the suspect in sight.

hope that helps, chris

As an interesting side note, and an interesting proposal: call AFD. Out at TCFR we had a rollover recently where we had conflicting reports regarding ejection (other report was the driver ran away), either way, we had no driver. Weeds were about 3-4 feet tall, lots of junk in the yard, etc.

We got the infrared camera (normally used for fires) out and "swept" the immediate area with the camera, looking for a heat signature. We proceeded to search the surrounding area with the camera as an adjunct and were able to clear the field pretty quick.

Moral? If the copter has him on infrared, and the officers just can't pin him down, get the officers an infrared camera - AFD has them, just call them. Doesn't APD have units with infrared mounted on the roof? Might not "reach" into the field... but handheld units would be a good idea.

> they finally just
> gave up and called the whole thing off.. Meanwhile, all the calls in

Ugh. THAT just proves that the "new" radio system is going to be treated like nothing more than new hardware. Just TRY explaining to someone that there aren't CHANNELS on the new radios - they're GROUPS. You get a blank stare, and a "so what channel do I use" question. God FORBID we actually use the talkgroups.

Now that lots of folks have them, we need a COUNTY WIDE disaster drill. Maybe a "dirty bomb" scenario that is DESIGNED to overwhelm every agency and FORCE cooperation, even with those who DON'T have the 800-trunked radios. MAKE people start using talkgroups, channels, etc. and realize that not every radio has every channel/talkgroup/patches. Make TCSO, APD, AFD, EMS, Constables 1-5, every surrounding city, Williamson County, Hays County, Bastrop County and all the hospitals come together, MAKE the EOC work, MAKE them use talkgroups/channels/patches and SEE the limitations/expanded capabilities. Until them, it's just new toys that look and act like the old ones.

Along those lines - FEW radios have the ability to page/call others. FEW have the touchpads with number keys. VERY disappointing.

I think StarFlight is more experienced at it. I heard that they got rid of their FLIR, though. Something about maintenance costs. Casey, that true? If so, that's sad... StarFlight is *the* helicopter service, IMHO (second ONLY to the Coast Guard).

LMAO. Probably just inexperience, and someone "at the top" being overly careful. Hopefully, it'll get better.

Remember, though, that Austin, despite its efforts to look big, is really just a small city. We have flash and glitter, but when it's all said and done, we're not that big at all.

Mike :)

I'm sorry, but that just made me laugh... I can only IMAGINE that actually happening somewhere! :)

FWIW, though, on a related note - most agencies going from Crown Vics to Impalas are just issuing the cars without any additional driver training. Bad idea - the Impala drives on different wheels, handles different and has a different power curve.

Mike :)

not "reach" into the field... but handheld units would be a good idea.
OH don't get me started on that one.. They have 1 or two roof mount FLIR cars but they are Lieutenant cars which means they are given to the unit less likely to be available on the street.. usually the lieutenant is stuck in meeting somewhere and can't be disturbed. I think the best cop in tithe city the one that finds the most stuff and seeks out the most self initiated stuff should be the one that gets the FLIR car every thing.. forget about giving it to a Lieutenant.

Capitol police and TCSO had one each too but I suspect it's the same thing with them..

THAT just proves that the "new" radio system is going to be treated
like nothing more than new hardware.

Yes I'm VERY disappointed in how this whole talkgroup thing is shaping up.. Like the guy in Williamson County said.. it took them about 3 years to figure out how to effectively "patch" the talkgroups together so that one agency would be about to patch with the other agency and have communications. Why they decided not to give Travis County Parks the EMS county channel is beyond me. I was asked what the easiest solution would be and I said well you can have EMS and the parks people go to a common channel like one of the Interops. or else just take an Interops and patch it to EMS county. I suspect they would take someone who knows what they are doing with the new system. They seriously need a patch from the new system to Intercity mobile and Intercity base. But I think there are only a few people and they are of course never around with you need them. Everyone keeps saying that here was no formal instruction on what these other talkgroups were to be used for such as the Blue 9-16 or the Interops or the Red ones. That's sad..cuz these talkroups wil never be used.

I've heard that now it may be next year before AFD or possibly the other agencies move into the new Combined Center for Emergency Communications off 51st street. They are having what amounts to "major" problems getting this new software program to work. They were supposed to switch a month ago but it didn't happen.

Mike,

You hit some valid points and I would like to suggest that they reprogram the talkgroups in Zone 3 to reflect use rather than availability. In that, I mean 3-1 would be Operations, 3-2 would be Medical, 3-3 would be Rescue, 3-4 would be Transportation, 3-5 would be Suppresion/Mitigation, 3-6 would be Enforcement, 3-7 would be Rehab, 3-8 through 3-16 could be named after more thought has gone into this than I am willing to spend right now. But, when dealing with a scenario involving IMS, the crews should not have to worry about what channel Command is on as opposed to Transportation, etc. And, these should not be on the same channel as the point of having this system is to "clear the air" so to speak.

With that, as many groups are named, there should be that many radios in the EOC. Every time a call is assigned to Zone 3, the EOC gets activated and those commanders that are in HQ man the radios and handle the communications for that event. The only communications to dispatch are via the EOC (dispatch is not allowed to communicate on Zone 3 if the EOC is activated and manned (that isn't to say that it doesn't take time to get it manned, especially at night time).

I would also suggest getting TCEMS, FireNET, WCEMS, LCRA Lake, Bastrop, and AFD FireMed moved to a unique Zone (or, maybe Zone 1 and moving the other groups out to a unique Zone). These patches should be running 24/7.

While we are on the subject, the Zone 2 groups should also be renamed if they are to be reflective of AFD's uses. 2-1 should be renamed Dispatch, 2-2 should be renamed FireMed, 2-3 should be renamed Fireground 1, 2-4 should be renamed Fireground 2, etc. (or, some other useful naming convention). The problem with the current naming conventions (throughout the EMS radios, specifically) is that the naming conventions changed midway through. We have Modes, Reds, and Blues for Zone 1 through Zone 4, but that convention stops at Zones 5-8.

Why is Zone 2 named Tac, anyway? Isn't it an AFD Zone?

Also, Mike, "channel" is an appropriate synonym for the talk groups, whereas "frequency" is not.

Can anyone clarify why we chose such naming conventions and the justification as to why they were meant to work better than "functional naming"?

Thanks,

Michael Schadone, NREMT-Paramedic

Topic: 1936 Message: 1942

Ideally, there should be a common set of "overlap" channels. While each agency certainly needs their own specific channels (ideally in their own specific zone), there should be a configuration of zones and talkgroups that are the same on each and every radio in-system - a guaranteed minimum set of talkgropus that everyone, everywhere has.

I like the idea of the EOC being the "master" of certain channels, "comm" others, and "on-scene ICS presences" others - it breaks up the workload without increasing the confusion.

Having intra-agency TAC channels gives those people in the same agency a way to talk to each other without stepping on anyone, and having inter-agency TAC channels gives everyone a common ground to work from.

So, to summarize: Each radio has its primary zone set to its primary tasks and talkgroups, including agency-specific channels. Each radio also has at least one other zone, maybe a "major incident" zone that has major incident talkgroups that EVERY radio has, regardless of whose radio it is. Each radio also has an "interop" talkgroup that has the basic necessary cross-agency channels (default and TAC) needed to interop and coordinate moving to inter-agency TAC while the EOC gets up and running and Comm is coordinated.

Mike :)

1943. Henry Sector is now up and running

Yahoo group: CenTexComm
Date: 2003-10-20 13:13:36 UTC
From: Robert Barker
Topic: 1943 Message: 1943

Apparently Henry Sector is now effective as of 10/19/03 and they are simulcasting on the old APD Ch 8 460.500

It basically is the area that had the most Frank Sector Activity in SE Austin: south of the Colorado River and North of Ben White, East of S. Congress Av, out to Hwy 71 including Montopolis

http://www.ci.austin.tx.us/police/downloads/aprshield03.pdf See the map on page 5.

1944. MetroCare Ambulance

Yahoo group: CenTexComm
Date: 2003-10-21 01:38:03 UTC
From: ExLngHrn@aol.com
Topic: 1944 Message: 1944

FYI, I have found out that MetroCare Ambulance is on an 800 mhz trunked system. They do use Motorola radios, so it's probably a Motorola trunked system (I don't believe Motorola makes LTR radios).

Their units identify in the Metro 20 series. (e.g. Metro 21, 22, etc)

Anyone have any info about local trunked systems for businesses?

-Wes

1945. Elgin, TX New Police Radios Connect to Bastrop County, Cities

Yahoo group: CenTexComm
Date: 2003-10-22 16:56:17 UTC
From: Robert Barker
Topic: 1945 Message: 1945

http://www.elgincourier.com/articles/2003/10/16/news/news01.txt

New Police Radios Connect Bastrop County, Cities

Elgin City Council members Tuesday unanimously approved an interlocal agreement between the City of Elgin and Bastrop County for direct radio communications. "This is a winning situation we've needed for a long time," said Mayor Pro-tem Brian Lundgren.

The interlocal agreement was necessary for the estimated $40,000 worth of radio equipment for the Elgin Police Department to communicate directly with the Sheriff's Department. "Forty thousand is not enough for our police," said City Manager Jim Dunaway. Other equipment will be funded through Homeland Security grants. Dunaway estimated another $30,000 is needed to bring the department equipment up-to-date.
Dunaway said the new system would be cheaper to maintain. Currently the city pays $19.95 for hand-held units, $24.99 for mobile units and $39.95 for base units through the Lower Colorado River Authority. It comes to about $645 annually in radio fees, said Dunaway. The base and mobile units under the agreement will be $15 per month for the radio fee. Dunaway said the city will try to sell the LCRA equipment.

Elgin Police Department Chief Steve Huckabay said, "We really appreciate the County going ahead to do this for us!" He provided a list of items that could be purchased through the County including 13 portable hand-held radios at $2,201 each for a total of $28,613 with 13 chargers at $77 each for a total of $1,001 and nine speaker microphones at $71 each for a total of $639.

Funds will also purchase two Astro digital spectra radio units for vehicles at $2,633 each for $5,266 total and one additional Astro digital spectra base radio unit is $3,219. The total expense of $40,000 includes two radio installations in vehicles at $140 each for $280 total and one base unit installation for $265. Software, antenna, cable, connections and service are included with the purchase.

Chief Huckabay said the additional funding from the Homeland Security grant will provide radios for the other ten vehicles.

1946. For the frequency challenged

Yahoo group: CenTexComm
Date: 2003-10-23 00:22:00 UTC
From: Catherine Keller
Topic: 1943 Message: 1946

For those of us without the PRO-96 and the new APCO-25 equipment, can a kind soul point me to a list of the APD/AFD/EMS frequencies now that there have been some additions (such as Henry, shown below, and Ida)?

Thanks,

As Robert said, henry is on 460.500. Most of the EMS frequencies are still being patched over. I don't think Fire has made the radio transition completely yet.

Anyone know any more about the Uniden scanners? The radio shack ones probably won't be updated for another six to nine months but the uni is supposed to come out next month.

take care,
sean

1954. NOAA forcasts G3 solar storm to hit Earth on Friday

Yahoo group: CenTexComm
Date: 2003-10-23 21:21:58 UTC
From: Michael Schadone
Topic: 1954 Message: 1954

Oct. 22, 2003 - Forecasters at the NOAA Space Environment Center in Boulder, Colo., observed two dynamic areas of the sun, one of which has produced a coronal mass ejection, or CME, Wednesday morning at 3 a.m. EDT that appears to be Earth-directed. The forecasters are predicting a strong geomagnetic storm, G-3 on the NOAA Space Weather Scales, that should reach Earth on Friday, October 24.
NOAA Region 484 developed rapidly over the past three days and is now one of the largest sunspot clusters to emerge during Solar Cycle 23. It is about 10 times larger than the Earth. This region, which is nearing the center of the sun, already produced a major flare, R-3 on the NOAA Space Weather Scales, producing a radio blackout on October 19 at 12:50 p.m EDT. The region continues to grow, and additional substantial flare activity is likely.

Larry Combs, a forecaster with the NOAA Space Environment Center's Space Weather Operations, said that this region has developed rapidly over the last three to four days. "It's somewhat unusual to have this much activity when we're approximately three-and-a-half years past solar maximum," he said. "In fact, just last week, solar activity was very low with an almost spotless sun." Solar cycles of high and low activity repeat about every eleven years, and the sun has been moving towards solar minimum for the past three years.

A second intense active region is rotating on the southeast quadrant of the sun. Although the sunspot group is not yet visible, two powerful eruptions occurred on October 21 as seen from the LASCO instrument on the SOHO spacecraft. These eruptions may herald the arrival of another volatile active center with the potential to impact various Earth systems.

Further major eruptions are possible from these active regions as they rotate across the face of the sun over the next two weeks. Satellite and other spacecraft operations, power systems, high frequency communications, and navigation systems may experience disruptions over this two-week period.

G 3
Strong
Power systems: voltage corrections may be required, false alarms triggered on some protection devices.

Spacecraft operations: surface charging may occur on satellite components, drag may increase on low-Earth-orbit satellites, and corrections may be needed for orientation problems.

Other systems: intermittent satellite navigation and low-frequency radio navigation problems may occur, HF radio may be intermittent, and aurora has been seen as low as Illinois and Oregon (typically 50° geomagnetic lat.)**.

Kp = 7
200 per cycle
(130 days per cycle)

Robert & Mike -

Thanks so much for the lists!

Am listening to the live fire feed from California tonight. It?s scary listening. I?m hearing some familiar locations ? I used to live in Alpine, CA. These poor fire fighters have to be just exhausted. They just about beat down an area and have to race to another location ? the fires are just devastating.

DA 03- 3407 October 27, 2003
WIRELESS TELECOMMUNICATIONS BUREAU
REGION 49 (CENTRAL TEXAS) REGIONAL PLANNING COMMITTEES FOR PUBLIC SAFETY 700 MHz BAND AND PUBLIC SAFETY 800 MHz

BAND(NPSPAC) ANNOUNCE REGIONAL PLANNING MEETINGS
The Region 49 (Central Texas) 1 Regional Planning Committees announce two Region 49 Public Safety planning meetings to be held on Tuesday, December 30, 2003, at the Texas Criminal Law Enforcement Auditorium, Building E, 6100 Guadalupe, Austin, Texas.
The 700 MHz Regional Planning Committee will convene at 9: 00 a. m. The agenda for this meeting includes the following items:

1. Review and approve agenda. 2. Review and approve minutes of the October 29, 2001, meeting
3. Treasurer☐s Report ☐ Greg Petrey 4. Subcommittee reports
a. Bylaws Subcommittee ☐ Ron Mayworm b. Plan Writing Subcommittee ☐ Ron Mayworm
5. Discussion and possible action on adopting the interim bylaws as the permanent by laws 6. Update on the CAPRAD700 MHz database ☐ Ron Mayworm and Ken Yoder
7. Update on the Region 49 website and listserver ☐ Greg Petrey 8. Review and discussion on the draft Region 49 700 MHz plan
9. An overview of the 50 MHz of spectrum allocated to public safety in the 4.9 GHz band 10. A review of the FCC Docket 00- 32 and the parameters outlined for agencies to operate in
the 4.9 GHz band 11. A review of the FCC☐s requirement for a plan to be developed within 12 months by the 700 MHz Regional Planning Committee for implementation of the 4.9 GHz spectrum in the region

1 Region 49- Central Texas includes the following counties:

News media information 202 / 418- 0500 Fax- On- Demand 202 / 418- 2830
TTY 202 / 418- 2555 Internet: http:// www. fcc. gov
ftp. fcc. gov
1
12. Discussion and possible action regarding the committee☐s intent to coordinate frequency assignments in the new 4.9 GHz public safety band
13. Old Business 14. New business
15. Receive public comments 16. Schedule Next Meeting

The 800 MHz (NPSPAC) Regional Planning Committee will convene at 3: 00 p. m. at the Texas Criminal Law Enforcement Auditorium, Building E, 6100 Guadalupe, Austin, Texas. The agenda for this meeting includes the following items:
1. Review and approve agenda 2. Review and approve minutes of the March 27, 2003 meeting
3. Consideration and possible action regarding the application of the City of Waco for mobile use of the 5 NPSPAC mutual aid channels

4. Consideration and possible action regarding any other applications received by the Secretary more than 30 days prior to this meeting
5. Old Business 6. New Business
7. Receive public comments 8. Schedule Next Meeting

Both of the Region 49 Public Safety Planning Committee meetings are open to the public. All eligible public safety providers in the Central Texas area, including the counties of Bastrop,
Bell, Blanco, Bosque, Brazos, Burleson, Burnet, Caldwell, Coryell, Falls, Fayette, Freestone, Grimes, Hamilton, Hays, Hill, Lampasas, Lee, Leon, Limestone, Llano, Madison, McLennan,
Milam, Mills, Robertson, San Saba, Travis, Washington, and Williamson may utilize these frequencies.

State and local governments and certain nongovernmental organizations that provide public safety services are eligible for licensing in the 700 MHz band. (See Section 90.523, FCC
Rules for details.) All governmental eligibles, including Native American Tribal Governments, as well as nongovernmental eligibles should be represented at these meetings to ensure that each entity☐s future spectrum needs are considered in the planning process. Administrators who are not oriented in the communications field should delegate someone with this knowledge to attend,
participate and represent your agency☐s needs.
All interested parties wishing to participate in the planning for the use of new public safety spectrum in the 700 MHz and 800 MHz band, or the newly allocated 4.9 GHz band within
Region 49 are encouraged to attend. For further information, please contact:
Ron G. Mayworm, Chairman Region 49 700 MHz Regional Planning Committee
2
P. O. Box 1595 Bryan, Texas 77806
Phone: (979) 209- 5475 E- mail: ron@ ktsignals. com
General information regarding public safety radio spectrum and the regional planning process is available on the Commission☐s internet site at: http:// wireless. fcc. gov/ publicsafety/.

1965. BC296-796brochf the brochure on the new Uniden scanner

Yahoo group: CenTexComm
Date: 2003-10-28 16:19:27 UTC
From: Robert Barker
Topic: 1965 Message: 1965

According to Strong Signals website, here is the latest on the new Uniden Scanner that supposedly will work on the new Austin/Travis County system. Rumors that the radio will be about $560 and possibly out by the end of this year.

http://www.strongsignals.net/access/image/radios/bc296-796brochf.jpg
http://www.strongsignals.net/access/image/radios/bc296-796brochb.jpg

Still no word on a fix for the Pro-96 but the radio is rumored to possibly go on sale $100 off for $399 in November. The Pro-96 will not decode the main simulcast sites using CQPSK modulation and I even had trouble hearing the Intellirepeater (outlying) sites using the C4FM modulation. We can only hope the Uniden will work better or that they will come up with a fix for the Pro-96.

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009%5F010%5F003&product%5Fid=20%2D526

People have asked if the city and county are using the new system and talkgroups much. They definitely are. Yesterday the SWAT callout was worked on Crit 1 and Law 3. Neither of those talkgroups are simulcast on any of the regular UHF APD channels. When EMS tells their units to respond on MedComm Central, there is no UHF equivalent. As far as I can tell, EMS is no longer using 462.950 at all. And Travis County is using talkgroups like East Tac and West Tac. AFD is still on UHF. Only Firecom 3 and Firecom 6 are being simulcast last I was able to monitor it. A list of talkgroups and frequencies are at:

http://www.trunkedradio.net/modules.php?name=TRSDB&sid=2

There are still a lot of agencies that I expected to see over on the new system and they haven't made the move. I don't know what the delay is. This includes: Pflugerville PD, City of Austin electric, Street & Bridge, Meter maids, City Inspectors, Street lights signs and meters, Westlake PD?, TxDot Courtesy Patrols. They said DPS would be here but I do not expect it. The new communications Center off 51st Street was supposed to be occupied by this month but they appear to be having problems. Some of it may be due to the delay in getting equipment delivered. They re also having lots of trouble with their new CAD dispatch software. See pictures of the new center and their monthly newsletter at:

1966. For Halloween

Yahoo group: CenTexComm
Date: 2003-10-31 06:03:46 UTC
From: Robert Barker
Topic: 1966 Message: 1966

For Halloween on 6th Street, it would be nice to have APD and EMS at least capable of being on the same Event talkgroup. Unfortunately I suspect EMS will have their own channel and APD will have theirs. But if EMS runs a command post down there perhaps, just one EMS radio.. could be on the APD event channel to avoid having to relay information back to APD dispatch doing an RA by CAD to the EMS dispatcher at the Main who then has to radio their unit in the field and get them going. It makes so much more sense when they can all talk directly to each other.

When I first started going to 6th street for Halloween. It was very organized. The crowds that were in the street had to walk in one direction.. if you didn't want to keep walking or if you wanted to go the other way, you had to get on the sidewalk. The last few years they have not really enforced it and it does lead to a lot more problems. They are not as strict anymore. They also used to do an official command post, putting a Halloween Command dispatcher there on the street. That was back in the day when APD and EMS could stand beside each other and relay call information right there.. But the last few years they just tried to run it all through their own dispatchers at the main who didn't always get a clear picture of what was going on and relays between EMS and police were not quick. The new radio system allows for great opportunity for them to work together although, we shall see how it goes.

As far as the dispatch protocols.. they have to have software that is compatible with APD, AFD and Travis County, so I'm sure it may not be the "best" that there is out there to offer. Unless things have changed, the EMS call takers read from cards .. they have flip cards that they must follow. Strict adherence to the cards is mandatory. They cannot deviate at all. I would be interested in knowing how many other EMS agencies in a city of or near this size use the flip chart/card program to assess callers/patients.

Unfortunately most all the radio traffic this year may be digital and no one will be able to hear much, depending on what talkgroups they elect to use.

TABC is on 156.06
DPS may use 159.210 or 154.950 (TCSO may use it too)
APD DT (Downtown) is George on 460.475

From: Robert Barker
Topic: 1962 Message: 1967

I got the talkgroups because I had the Pro-96 for about a month. I felt guilty but I went and got the radio that Frank had returned, once he found out that it didn't decode the CQPSK. I knew it wouldn't decode all the transmissions, but I wanted to play with the radio for 30 days before I had to return it for a full refund which is what I did. That's how I was able to get the talkgroups. I keep wondering if the radio is still at the store when I returned it and i'm tempted to go and get it again for another 30 days but I keep trying to resist the temptation.

1970. Williamson Co DPS

Yahoo group: CenTexComm
Date: 2003-11-13 17:35:43 UTC
From: Myles
Topic: 1970 Message: 1970

Got someone asking me about TX DPS comms in Williamson County.
What does DPS use, specifically in the Liberty Hill area, to talk to
the DPS base, I assume is Austin?
He knows about the trunk system but I'm not sure if DPS uses that
just for talking to the county/city agencies.

I figure we are looking at 155.460 or one of the 159.210 repeaters.

thanks

myles

1971. DPS in Williamson County

Yahoo group: CenTexComm
Date: 2003-11-13 17:41:50 UTC
From: Robert Barker
Topic: 1971 Message: 1971

DPS in Williamson County primarily uses the Williamson County Trunked system.
If they need to talk to DPS Austin, they will use 155.46/154.680 mobile.

1972. Re: [CenTexComm] Williamson Co DPS

Yahoo group: CenTexComm

From: ExLngHrn@aol.com
Topic: 1970 Message: 1972

Myles,
Typically, DPS in Williamson County operates off of the Wilco trunked system. They are normally on the "Traffic" talkgroup, which I believe is #3312. They still do use the 155.46/154.68 setup at times.
The DPS office that covers western Williamson County is 6B9, which is located out of the driver's license office at US 183 and Hymeadow in Austin. They have northwestern Travis County and southwestern Williamson County. There are also DPS offices in Georgetown and Taylor for Williamson County. Austin also has offices on North I-35 and on South Congress. (Plus DPS Capitol units on 155.445.)
Travis County DPS units typically operate off of the DPS VHF system. I'm not sure if/when they will get radios for the new digital system that TCSO and APD are using.

1974. APD and race relations in East Austin.

Yahoo group: CenTexComm
Date: 2003-11-14 18:02:04 UTC
From: Robert Barker
Topic: 1974 Message: 1974

I know it's a very sensitive issue but It's making big news and I wonder if anyone wanted to voice any comments about it. I hate to get away too much from the radio end of things. Only to say that on Valentines Day 1995, it was about 2 or 3am when they had the ONA (Officer needs Assistance Call). That call went on for about 20 minutes and it's all history now but according to new reports, some 80 officers responded to what was said was an out of control party and the police are faulted for coming in and "macing babies" and being unruly with a crowd. I was monitoring at the time and I heard the scanner traffic. The police have been asked numerous times about that night. The response I have heard from the police is: "Yes, we were definitely macing babies and we would not hesitate to come in and do that again with an out of control crowd, where officers were being injured and calling for assistance." Not to mention, why were there babies at a 3am out of control party. The only reason the police came, was because the homeowner called the police to ask them to make the people leave the party.

Ever since then, APD has been faulted with not being sensitive to the needs of the minority community in East Austin which is Charlie Sector. The latest report in the paper, says that only younger, inexperienced officers patrol Charlie sector. Senior officers do get a choice on where they want to patrol and I'm not a bit surprised that almost none of them are in this part of town.

The latest incident with officer Glasgow involves the officer being drug by the suspect's vehicle, while the suspect was trying to get away (flee) from Officer Glasgow. The Grand Jury's report said that Officer Glasgow's actions let up to this event, but I'm extremely confused how any of Officer Glasgow's actions would cause the suspect to drag him, and how it would be the officer's fault that he was drug. The current grand jury seems to be made up of an ex criminal defense attorney which may be a problem in itself. Anyway, just wondering if anyone has any comments or if anything, I wanted to pass on the link so you can read the story for yourself.

In my opinion, this is one of the fundamental reasons that citizens should be allowed to have scanners to monitor police activities. We are not trying to interfere and we are not trying to find fault with their practices. But as a citizen and as a taxpayer, I think we have a right to be able to know what they are doing. I fully support the Austin Police Department and I only wish they would take a stronger stance with the media regarding these issues when they come up. As far as I am concerned, when a police officer is drug by a suspect's vehicle, that is "Attempted Capitol Murder of a Police officer" and it justifies the use of force against the suspect. In fact, this would be considered a "textbook" example of the use of force. APD should come forward and say something like this and make their position clear. Anyway, just wanted to see if there was any other feedback out there regarding what's being said in the papers as related or compared to what you

have heard on the scanner.

1975. Re: [CenTexComm] APD and race relations in East Austin.

Yahoo group: CenTexComm
Date: 2003-11-14 21:23:55 UTC
From: Michael Schadone
Topic: 1974 Message: 1975

In my profession, I work very closely with APD Frank (and, now, Ida) sector officers. I will definitely be one to stand up and tell you that what they face is strong opposition from many of the citizens that they deal with. In this area, there are many student housing complexes. I have never seen any use of force in these areas. There is also an abundance of low-income/povery-level housing in this district. Again, I have never witnessed any use of force in these areas. Typically, the officers show up with manpower on their side. This is a powerful deterrent (one of which Officer Glasgow did not have the benefit of at the time of his incident, unfortunately) to those that would stand up to an officer.

There is an unfortunate reality that many are not seeing. The lower income folk (and, I'm not laming them or criticizing them) have a higher incidence of violent crime in their neighborhoods. Personally, I would appreciate a FRIENDLY police presence to deter any criminal actions that could be perpetrated against me, my family, my friends, or my neighbors.

Also, I can tell you that any violent incident that might happen west of the river will get a like response from APD (been there, done that, have the T-shirt, cleaned the bus with it).

One thing that I can guarantee is that APD treats all citizens with respect and understanding regardless of color, race, creed, income, etc. On the flip-side, do NOT make a stand where one is not to be made. No matter what side of the river you are on, you will be brought down, handcuffed and possibly arrested. This is something that I appreciate greatly. If I am ever called out to a scene where a person is behaving badly, APD always backs us up in our decisions. We all want to go home to our lives after work, and none of us want to be laid out in a casket at the end of the day This is a real issue for all of us in public safety, and we try to minimize it as much as we can.

So, to restate, I feel that (from what I've witnessed) APD does a wonderful job staying professional and treating the citizens with respect (even when they are in custody).

Michael Schadone

Couple points I want to...point out.

On Friday, Nov 14, 2003, at 15:23 US/Central, Michael Schadone composed:

>
> There is an unfortunate reality that many are not seeing. The lower
> income folk (and, I'm not blaming them or criticizing them) have a
> higher
> incidence of violent crime in their neighborhoods. Personally, I would
> appreciate a FRIENDLY police presence to deter any criminal actions
> that
> could be perpetrated against me, my family, my friends, or my
> neighbors.
Actually it should read: "...against my family, my friends, my
neighbors, or me" You are last when writing in English but your safety
is first in EMS. :)
>
Yes, this is true in their neighborhoods. I would also mind a friendly
police presence but cops are only humans as well and can only feel
emotions like fear, anger, and even be authoritative at inappropriate.
Creating fear within the citizens the police serve is NOT a positive
approach. Having PEACE officers wearing boots and all the riot gear
downtown for celebrations on sixth street or for protests is not very
peaceful...they make me fear them when I see them like that. Is that
the BEST way to be PEACEFUL?

White color/professional people do crimes from work and claim it is
for the better good of humanity. IRS agents with machine guns seizing
a church because they refused to be a 501(c)3 non-profit church. Oh,
well. Its for my better good that these great government departments
exist in today's society unconstitutional or not.

> Also, I can tell you that any violent incident that might happen west

That they should and ANY public service and any human living in today's
time, really.

> On the flip-side, do NOT make a stand where one is not to be
> made. No matter what side of the river you are on, you will be brought
> down, handcuffed and possibly arrested.
How nice. Even if the cops are wrong...and they can be.

> This is something that I appreciate greatly.
Until it happens to you.

> If I am ever called out to a scene where a person
> is behaving badly, APD always backs us up in our decisions.
As they should because they are right there and if they see the act of violence happen, they have the statutory law to enforce it.

> We all want to go home to our lives after work, and none of us want to
> be laid out
> in a casket at the end of the day This is a real issue for all of us
> in
> public safety, and we try to minimize it as much as we can.
>
Well this just doesn't happen in public safety. It happens on Earth daily. If you want to be safe why don't you pack a handgun. Surprise the hell out of an armed patient. I wouldn't want to always depend on the APD (or any PD) to clear a scene and make sure its safe. Sure they are in the room but that doesn't mean its always safe for the unarmed paramedics.

> So, to restate, I feel that (from what I've witnessed) APD does a

From: ExLngHrn@aol.com
Topic: 1988 Message: 1988

It's looking like the Uniden digital scanners that do Austin's trunked system may be out by early November.

Besides Austin's new radio system, what other APCO-25 digital radio is around here? Does Lockhart still use any digital talkgroups? What about Federal agencies?

-Wes Ogilvie

Early November? Isn't "Early" November in the past?
I don't know about other APCO P-25 trunked systems,
but there are plenty of Federal agencies that are
using P-25. Try 164.650 MHz when the Secret Service
is in town.

Thanks to all who posted regarding DPS use in Williamson County.
I'm wondering if anyone happened to catch what happened on I-10 early this morning (7:30ish) between Weimar and Columbus.
Apparently, Lifeflight from Houston and Careflight(?) from SA were sent to this scene for a major accident.

1998. Jacqui segment delayed not on Oprah this week

Yahoo group: CenTexComm
Date: 2003-11-18 14:03:00 UTC
From: Robert Barker
Topic: 1998 Message: 1998

Jacqui segment delayed

"Oprah" has postponed this week's episode featuring Jacqui Saburido that was scheduled to air Wednesday.

Over the weekend, the programming gurus at Harpo Productions, Oprah Winfrey's company, decided to reschedule the show for next Tuesday. Scheduling is tentative.

In October, Saburido taped the show in which she talks about the horrendous wreck that left her disfigured and burned over 60 percent of her body. In Austin on Sept. 19, 1999, the car Saburido was riding in was hit by a teenage drunken driver, Reggie Stephey.

"Oprah" airs weekdays at 4 p.m. on KVUE Channel 24. Since scheduling appears to be fluid, check www.oprah.com for the latest information.

1999. City's cameras know when traffic is tough

Yahoo group: CenTexComm
Date: 2003-11-18 16:06:43 UTC
From: Robert Barker
Topic: 1999 Message: 1999

This article appeared in yesterday's Statesman. I was aware of these traffic cameras but I assumed they would be all part of the new Combined Transportation, Emergency and Communications Center (CTECC). I had thought the purpose of putting everyone together was to allow police, fire and EMS the ability to "see" the intersections and the incidents.
One could expect that these cameras should also be available to the public via the internet. Also their newsletter http://waller.ci.austin.tx.us/ctecc/index.cfm dated 11/7 states that the center is "almost ready". Does anyone know if any of the agencies have actually moved yet?

****
From Monday's Austin American Statesman: Ben Wear's Getting There
City's cameras know when traffic is tough

Monday, November 17, 2003

The eyes of Austin are upon you.

Not at this moment, unless you're reading this while driving on Burnet Road or Guadalupe Street or some other major street in town. (And shame on you if that's true. I try to read newspapers only while driving on minor streets.)

But for at least part of each livelong day, chances are that you and your car are the stars of 25 television dramas showing exclusively at the city's Traffic Management Center just off South Lamar Boulevard.

The images are captured by video cameras mounted at about 120 intersections around town. If you've seen a camera, which looks like a small white streetlight with a black globe, you probably didn't know it.

Your columnist, presumably a trained observer, failed miserably to espy one even after being told where it was and what it looked like. I had to see a picture of one, then was finally able to spot a camera in the wild.

The city, by the way, has a separate system at about 25 intersections with more recognizable equipment similar to convenience store security cameras. But those instruments do not transmit actual pictures. Instead, they count cars electronically and automatically alter stoplight intervals.

Before any of you go into Orwellian spasms, I should point out that the other cameras are not there to catch people speeding, dealing with drugs, canoodling with someone not their spouse or even attending to personal hygiene.

The purpose of the $21 million center and the $1,700 cameras is to make traffic flow as smoothly as possible. The pictures from the cameras allow

city engineers to make rapid adjustments and repairs at the city's 750 or so signalized intersections.

Most of the time, no one even looks at the video screens, according to David Girard, transportation director in the city's Planning, Transportation and Sustainability Department. When I visited the center, a sleek room with TV monitors covering one large wall and a bank of computers arrayed on a center island, the engineers mostly worked on the computers adjusting signal intervals around town and paid little heed to the screens.
***** EMS, Police and Fire could greatly benefit from being about to see these screens **

Most intersections aren't even on screen most of the time. The point, Girard and Chief Signal Engineer Ali Mozdbar say, is to be able to quickly size up a situation when trouble arises. Then if, for instance, northbound traffic at 38th and Lamar is backed up excessively during evening rush hour, they can extend the green light time northbound for a while to unclog the clog.

During both rush hours, a police officer hangs out at the center and, when the need arises, relays details about wrecks or other situations to dispatchers.

As for Big Brother concerns, Girard said that although the center can make tapes, it almost never happens.

Most of us, at one time or another, have changed clothes at 30 mph. What about the cameras' zoom feature, which raises the specter of illicit ogling? Doesn't happen, Mozdbar says. Anyone caught zooming in for fun, he said, would face "harsh consequences."

2001. sound clip wanted-Austin system

Yahoo group: CenTexComm
Date: 2003-11-21 18:16:20 UTC
From: Sly & Debbie
Topic: 2001 Message: 2001

Anyone have a sound clip of the 9600 baud data channel-as in use by Austin now? I would like to know what it sounds like, compared to the standard 3600 data channel (which I'm familiar with).
Also would like to hear (if there is a difference) what the cqpsk modulation sounds like (in analog mode) as opposed to what the c4fm sounds like. I am familiar with what the c4fm sounds like in analog mode, as we have a system over here and want to compare.
Occasionally the band opens up on 800 and would like know what I'm hearing when I'm searching around.
Maybe someone could upload to the files section?

Thanks, Sly n5gqb college station

2012. I should have the BC296D soon and can give feedback on Austin

Yahoo group: CenTexComm
Date: 2003-12-02 06:36:04 UTC
From: Robert Barker
Topic: 2012 Message: 2012

I did order the BC296D from http://www.bearcat1.com/item0058.htm for $524 w/shipping. I expect to get it next week sometime. I will be able to give updates as soon as I can regarding it's ability to scan the DIGITAL talkgroups since I know that is what everyone is asking about.

Wes was able to get the radio last week and he's been working hard trying to get the radio to work on the Austin/Travis Co system and trying to see what he can hear. Unfortunately it's not picking up the system straight out of the box, and there are some adjustments that will need to be done. So far the problems have been Sound Quality and Reception, but from what Wes has said, it looks like it is working, and I don't think there will be anything better anytime soon. There has been absolutely no word at all on an adjustment for the Pro-96 to receive the Austin System.

Although $524 seems like a lot of money, you have to remember this radio comes with software, cable, battery pack, and a charger. The Pro-96 comes with NOTHING. You have to buy everything, including the batteries yourself. Plus they are offering $508 if you do a cash transaction and send them a check. But as demand for this radio heats up, they may be running low on supplies for awhile. Most all the dealers are doing the $525 range but they differ on shipping. If you are one of those people that prefers the base model. it's at: http://www.bearcat1.com/item0059.htm Same price. If you get one of those, let me know so I can come check it out.

I too thought it was very odd that all the Austin area hospitals took out their 155.34, 155.28 radios. I thought that was a standard statewide. It sure doesn't seem to be very compatible to the many other Texas rural departments that may not have cell phones, if there were ever some sort of major disaster or mass casualty incident. Also I didn't realize that so many EMS agencies across the state were using cell phones to communicate with hospitals.
It was just a few months ago that Austin EMS was using the manual dial up on 155.34 to call up each hospital and having to share it with everyone else all on one channel. My how times they are a changin'.

Robert,

Thanks for the info. I want to know how it sounds. I know you said the 96 was crap and that it wasn't good at all for a $400 or 500 scanner. I would agree.

Yeah, many services still use cell phones probably because the radios aren't that cheap and compatible with everything else. But it doesn't make sense why the hops would take out their radio, how are county agencies going to communicate to them when they need medical control and like you said for MCI events. Tho the feds would probably come and and take over...

Again, thanks for the info.

sean

2016. Cell phones and EMS relying on them -- in an all out disaster.. don't plan on them working.

Yahoo group: CenTexComm
Date: 2003-12-03 06:39:54 UTC
From: Robert Barker
Topic: 2016 Message: 2016

I'm not understanding the reason to pull out the VHF radios on 155.34 and 155.280 out of the hospitals. Sure the way to go may now be with cell phones but have they already forgotten that we might just have some sort of disaster here? Like say a bad weather event that would knock out power, phones, etc for perhaps several days.

I was in Houston with several hurricanes and one time we were without power for 5 days. Sure they have generators but they may not always be reliable at every point along the way. (say in the first 20 mins after the disaster happens, when patients would most likely be brought in. It would not be unusual at all for the cell towers to go down and to loose the new trunked radio system with a system wide failure due to some major event such as bad weather. Say EMS units and possibly helicopters from other cities were having to get patients to the nearest Central Texas Trauma Center like Brackenridge and have no way to talk to them. At least with the old VHF radios, all they needed was a working radio on the simplex frequencies (by battery or generator) to be able to talk to a mobile unit or helicopter incoming with patients. Now they rely on Amateur radio operators to come to the rescue with their ham radios that can relay patient information. But that method is not very reliable.

The Office of Emergency Management, makes a big deal of what to do in a disaster and how they would handle this one and it just seems like getting rid of the simplex VHF radios was a bad idea.

Understand that the radios are a courtesy only. In a disaster, hospitals just expect patients. It's nice to be able to talk to them, but not a requirement.

EMS crews are trained to manage patients all the way to the hospital. Hospitals are trained to accept patients.

For what it's worth, most EMS dispatch centers have DIRECT (EMS-only ring-down lines) connections to hospitals in the area. So worst case, the unit calls dispatch, who relays to the hospital.

Mike ;)

2023. Upgrades at Round Rock PD

Yahoo group: CenTexComm
Date: 2003-12-05 03:51:31 UTC
From: George Joos
Topic: 2023 Message: 2023

IF you haven't noticed from the changes in some of the radio traffic with RRPD, they have been working through the process of upgrading the cruisers with laptops. The patrol officers can now see the call notes as dispatch enters them, browse the call list, do their reports, etc. from with in the car.

I haven't had a chance to ride with a laptop equipped officer but from what I have seen it is pretty cool (especially for us techno geeks). The setup in dispatch is good too. They can now see where the logged in units are overlayed on the city map thanks to GPS in the cars.

My understanding from talking with dispatchers is that there will still be plenty of radio traffic to monitor since they are not expecting the officers to be continually be browsing the call list. And of course all the "good" calls with still be via radio since driving, turning on lights & siren, and talking on the radio pretty much uses up all of an officer's hands he won't be able to type stuff in.

2024. hillary agents

Yahoo group: CenTexComm
Date: 2003-12-05 21:32:19 UTC
From: Rev. Sean Farrell
Topic: 2024 Message: 2024

Hello,

As we all know Hillary Rodham Clinton embraced her presence here in Austin for her 8 million dollar book signing. I saw the agents protecting her from us second class citizens. As far as I could tell, they were just using nextel radios with the ear piece and the PTT button. Some weren't even using that, just the telephone. I'm surprised they would be using nextel. I don't know if this is what they typically use but I thought they carried astro sabers.

Anyone else know?

Sean -

You do know your signature is bogus, right? I mean once you post public,
I can do anything I want with your email, including reposting it.

BTW, it would only be valid if it were on top, anyway - if I have to read
the information I'm not supposed to have to find out that I'm not supposed
to have it, that doesn't help much, does it.

Do us a favor and trim that crap off - it's garbage in email.

Mike :)

2031. Central Texas I-35 corridor

Yahoo group: CenTexComm
Date: 2003-12-07 15:34:59 UTC
From: ExLngHrn@aol.com
Topic: 2031 Message: 2031

Per Texas DPS Lampassas communications center, 3 tractor trailer flatbed rigs with covered loads are being driven southbound on Interstate 35. The vehicles are being driven by Middle-Eastern men. A trucker has heard the men discussing President Bush, but was unsure of the reference to the President.

The rigs are labeled "Excellent Transport."

Per DPS, stop and investigate to the officer's satisfaction.

Vehicles last seen just south of Temple, Texas at 0830 CST.

From: John Habbinga
Topic: 2032 Message: 2033

Program a search from 138 - 144 MHz in 25 kHz steps
with AM mode. If you listen with an outdoor antenna
or just go outside with your scanner, you should hear
air-to-air comms.

Hint: To improve sensitivity in this band it helps to
install a FM broadcast filter. Pick one up at
RadioShack with BNC/F adapters for about $20 or buy
one with the connectors on it already at Grove or
Optoelectronics for about $100.

2034. Trail of Lights - Zilker Park

Yahoo group: CenTexComm
Date: 2003-12-08 01:02:16 UTC
From: ExLngHrn@aol.com
Topic: 2034 Message: 2034

For those of us with the BC296D or BC796D, there's a bit of scanner traffic related to the Trail of Lights. Park Police 1 is a fairly active talkgroup. (TG 271 on the Austin TRS) Also, check the LCRA radio system for Capital Metro who will no doubt be active. I'd also expect to find some APD event talkgroups active, and perhaps EMS event groups. Austin Energy is on the new digital system. Since they've been helping with the trail, check there on the digital system for them. Their talkgroups are in the 150 range. (Electric dispatch is 155.) I haven't yet heard any radio traffic on the digital system for the PARD staff, but that may well change.

2035. EMS uses Medcomm West

Yahoo group: CenTexComm
Date: 2003-12-08 12:50:49 UTC
From: Robert Barker
Topic: 2035 Message: 2035

Wow, an EMS District Commander finally "broke ranks" last night and decided to make history..they actually used a new talkgroup. Medcomm West to be exact. They were working with STARflight trying to extricate 3 uninjured hikers along the Barton Creek Greenbelt and there was just too much radio traffic on Tac Blue 6 so they told STARflight to go to Medcomm West. Kudos to EMS for realizing they actually do have more talkgroups for their use. In the middle of the whole ordeal, another EMS unit was tying to contact their dispatcher regarding another call and were told to go to Tac Blue 4 which is the unofficial FireMed channel when 3 is busy. Anyway interesting listening but about 30 more pieces of apparatus on the scene than they needed. The hikers just needed help getting out of the trail, something about a disability. No one was injured and they were just trying to get STARflight only to help to locate them but EMS brought all their stuff anyway and so did AFD..they had to block off that part of mopac there was so much stuff. The radios still don't work very well down the cliff. Fortunately AFD is still on UHF and at least they can go do to direct and still talk. I have no idea if they will remember about the simplex channels they will be able to use once they are relying on the trunked radios only. It should be interesting.

Also something else yesterday, APD got a call to a GSW to the head somewhere off Georgian.. APD cleared the call unfound and then an hour later they got the same call again.. and found the person dead. Someone really screwed that one up.. I guess APD just thought it was some other address or something.

2038. update on comm center

Yahoo group: CenTexComm
Date: 2003-12-11 02:23:15 UTC
From: jose esqueda
Topic: 2038 Message: 2038

TC EMS is in the new communication center. On January
11th AFD will move in. By January 17th or 18th APD
will be the last ones in.

So by EMS County do you mean all of EMS dispatch is now at the new Center? AFD has not even gone digital yet.

I just got my BC296D today and I'm trying to figure it all out. Having to start from scratch. At least they had a SWAT callout for me to listen to.

Yes, EMS dispatch and county. Everyone will go digital
by January.

TCEMS will not be digital, though it will be simulcast on the digital system. EMS Dispatch will be transmitting on the digital system which will be simulcast to the VHF-Hi band for the FRO's. The FRO's will transmit on the VHF-Hi band which will be simulcast on the digital system.

Mike

2042. Manchaca FD/EMS have been feuding for years.

Yahoo group: CenTexComm
Date: 2003-12-12 16:06:40 UTC
From: Robert Barker
Topic: 2042 Message: 2042

Manchaca Fire and Manchaca EMS has been feuding for years. Unfortunately that's not that uncommon in unincorporated areas. This area has seen way too many chiefs and not near enough Indians. Basically you have a few people that step up (with good intentions) to run the organization but unfortunately their supervisor styles clash with other's who also want to be in charge. Instead of trying to work together, they choose to go separate ways which benefits no one. Remember when Manchaca EMS popped up with their own frequency on 155.400? They were breaking off from the Fire dept. Now they are so mad at the fire department that they gave away their apparatus to other departments. The taxpayers paid for that equipment so they should be entitled to keep it in their district. But they also probably voted for that taxing jurisdiction, not even knowing all the trouble that was brewing. It is really sad because I□m sure very one of these people have good intentions but they just don□t get along. Why can□t we all just get along? In the city of Austin, the agencies are kinda sorta forced to work together, and they all do a great up. But there will always be management and supervisors trying to take command the mess it up for everyone. All I can say is.. if you are living in an unincorporated area or planning to move to one, be careful that they area has adequate and sufficient public safety protection.

2045. I have the Uniden BC296D handheld. It does work in Austin but not all that well

Yahoo group: CenTexComm
Date: 2003-12-12 22:32:47 UTC
From: Robert Barker
Topic: 2045 Message: 2045

I have the new Uniden BC296D scanner. I☐ve had it 3 days now. I☐m still trying to figure it all out. I☐m still using a regular scanner to monitor most of the other stuff like Adam Radio, EMS Disp, AFD and all the county stuff.

I put the radio in FM instead of NFM like Wes posted on www.stongsignals.net <http://www.stongsignals.com/> , and it seems to work better. I used the sound settings that are posted on www.trunkedradio.net <http://www.trunkedradio.net/> and they seem ok, although there are many times when I get clear transmissions and other times when it☐s totally distorted. A lot of it does have to do with reception. At N Lamar just north of 183 it seems to work perfect. And pretty much all along 183 towards the Ohlen Rd Target and around up by Pickle research it receives clear. Of course, I feel that it☐s only so so at my house

Fortunately the night I got it, they had that SWAT callout on Crit 1 and I had it locked on that talkgroup and it worked fine. I also found 0997 APD Motors talking yesterday so I confirmed that one too. I☐m monitoring a bunch of others and I don☐t mind corresponding with anyone else who has this radio to compare talkgroups that I am working to identify.

I still have tons of questions about this radio. The display jumps around so much that I can☐t tell half the time whether I☐m searching talkgroups or scanning talkgroups. Some radios seem to work well, like Pflugerville PD, I hear very well, even downtown, but EMS radios don☐t come in that well at all. The software pretty much sucks. I was able to put in the frequencies and talkgroups but then when I go to bank 2 tab, I☐m not finding a way to transfer the 100 talkgroups that I just put in for Bank 1 so if you know of a way to do that let me know. I also posted that on www.strongsignals.net <http://www.strongsignals.com/> and they seem to be saying the same thing. I think people are there are having more trouble then I have and I wrote about 20 people yesterday replying to them individually trying to help them out and answer questions about the radio. I manually went in and put in 100 talkgroups for the Bank 2, so I have Simulcast 1 on bank 1 and Simulcast 2 on Bank 2. The program on the Pro-96 allowed you to take each page of talkgroups and copy it to the next bank so it was much easier.

I loaded the software that comes with the radio, and the help .PDF file has many blank pages. Everyone on strong signals also confirmed this. The help file does not have hardly any instructions at all. The program has a pull down that says ☐Copy Trunk Ids Data☐ but then there is no pull down or icon to paste that data. It seems really stupid how they did it. But I am able to put frequencies in the program and talkgroups and I am able to program the scanner. I also had it monitor while I watched it on the computer but

that seemed pretty worthless that you have to type in alpha stuff using the mouse and clicking on the keypad. I hope someone comes out with something better, I saw something on www.strongsignals.net <http://www.strongsignals.net/> about a program that saves the data but I already have the data saved with this program that came with it so I☐m not sure why I would need that program.

Overall I☐m pleased but I do not think it will replace all my other scanners. Reception is hit and miss and there are times when it is so distorted that I can☐t hear them at all or other times where transmissions will just disappear

Oh I almost forgot: Here is an example of the updates that I☐m working on. As soon as I feel reasonably comfortable with knowing what they are, I will update the talkgroups at www.trunkeradio.net <http://www.trunkeradio.net/>

Ok well TCSO seems to be on

2411 ☐ TCSO working a movie shoot. I guess they are providing security. They mentioned about a school and busses and extras and blocking a road. I☐m sure this is the move CHEER UP but I don☐t☐ know what this channel is called. Perhaps event 1? Who knows. There seems to be plenty of event channels I guess everyone has several.

2414 ☐ seems to be TCSO units at the lake dragging the water, I guess looking for that couple that drowned. So perhaps this is the Dive Team or just a Lake channel. I don☐t know I☐m still listening. But if you want to try and tag those like that and let me know what you think.

There are a bunch of stuff higher than the Pflugerville talkgroup

3824 ☐ I could have sworn I heard STARflight calling Bastrop SO and he said ☐on intercity☐ so I ran over and put 154.950 into another scanner but then he was on that frequency and it wasn☐t on the talkgroup anymore so I ☐m not sure if that was a link to 154.950 or just a link to Bastrop Co☐s system. Who knows? And I☐m not sure about the number cuz I was getting out of the shower.

581 ☐ some guys talking about breaks in the road on 6th street. It may be street bridge

Actually, you can transport to an adjoining county if it will expedite things. We used to routinely pick folks up in Williamson County and transport them back to OUR judge in Travis County (the one who issued the warrant).

2054. New MDT's

Yahoo group: CenTexComm
Date: 2003-12-20 17:55:15 UTC
From: jose3763
Topic: 2054 Message: 2054

Does anyone know anything about the new MDT's in APD's cars. I remember the older Motorola mdt's, just started noticing the new ones popping up. Anyone know who makes them etc? .. Thanks

2055. New MDT's Fire crews at Planet K and AFD leaves the scene too quick sometimes.

Yahoo group: CenTexComm
Date: 2003-12-20 22:00:16 UTC
From: Robert
Topic: 2055 Message: 2055

The new CDT Computer Data Terminals are all part of the new multi million dollar communications system that they have. I think they are using the old Water/Wastewater system for the frequencies and I'm pretty sure they are made by Motorola or sold with the complete package. They have color screens and the officers even have access to a data base of "most wanted' or more importantly for this town - homeless people so they already will have their information on file and will not have to go through the trouble of trying to get them identified.

The fire at the Strip shopping center this morning was a mess. per the post from Michael Maretka:

Austin fire Crews were Busy early this morning with what started out as a Heavy Box Alarm at a Strip center turned into 3 alarms:Box 2501 `11657 Research Blvd cross streets of Thunder Creek & Duval at the Planet K /Doll House 7 Triple A news stores.
First units on scene reported all they found was a smoldering Light Ballast so The alarm was canceled.right after it was canceled and as they were in there investigative mode it jumped to 2 alarms followed by the 3rd alarm .All 8 businesses were destroyed. As of 1130 they found the cause of the fire which was accidental problem with the electrical system in the complex $400k in Structure loss and 450k in Contents .

AFD sometimes tends to clear a call too fast thinking it's all over with. If anyone remembers the Centennial Condo fire from a few years ago over by UT's West Campus. AFD responded to a fire in a trash chute. Thought they had it out and came back a few hours later to the entire complex out of control. The entire complex was a total loss, just from a fire in a trash chute. The one from this morning started from a light ballast.

I'm still logging lots of Talkgroups on the new Austin/Travis County TRS. The Scanner works pretty good but it's not perfect. Does anyone else have one of these radios besides me and Wes. If, so please post any updates to the database at:
http://www.trunkedradio.net/modules.php?name=TRSDB&sid=2 If you have not logged on, you do have to create an "account" with a password but there is no charge for it.

2056. Re: [CenTexComm] Austin/Travis County simulcast sites

Yahoo group: CenTexComm
Date: 2003-12-22 05:24:07 UTC
From: Robert
Topic: 2056 Message: 2056

I put both Simulcast 1 and Simulcast 2 into my radio as well as the IR sites which I monitor when I am in those areas as well as a bank of the input frequencies. I think Simulcast 1 is more popular in the city but I can hear both from my house. I believe when the original system was set up, one was supposed to be for the inner city and the other sites were for the county, so I'm not sure if it still works that way. I do not know the location of the Burleson Manor site but I can hear that fine from my house. The Honeycomb (Nameless Rd) and the Marble Falls IR can be heard well along Parmer near McNeil.
I haven't been able to pick out any certain patterns with the 2 sites. The IR sites are very strange in that you might hear one of the talkgroups for only one transmission and then it's gone.

but just wondering what the initial reports are on how well the new
296/796 does on the Austin system.
I remember hearing something about the pro96 couldn't quite handle the
cqpsk/lsm modulation?

Thanks, Sly

2059. Still working with the BC296D in Austin

Yahoo group: CenTexComm
Date: 2003-12-24 07:44:28 UTC
From: Robert
Topic: 2059 Message: 2059

I first posted about the BC296D on Dec 15th.

I'm still working with this radio. I have been able to hear a lot of events that you couldn't have heard without the radio. Zilker Park Trail of Lights has run every night. They started out using L&W since it was one of the only talkgroups that they could find that APD also had. Now the Parks police are using Parks 1 and they leave APD on L & W (License and Weight) which is kinda not fun cuz they are all working the same event but Parks is on a channel that APD can't monitor. My scanner has the ability to monitor more talkgroups than their expensive radios.

Then Last night APD was working the Jingle Bell Bike ride and the tides were turned because Park Police were needing to relay information on missing children to APD and they didn't have the APD Events talkgroup. What a mess.

They either need to figure out how to patch talkgroups together or they need to recall all the radios back and have them reprogrammed with compatible talkgroups. Of the people I know that are using the radios, none of them are comfortable with them and most of the training the received on the radios was prior to even having the radios so they can't remember how to do everything. I don't understand why but the radios will only scan certain talkgroups and that is also frustrating.

As far as the BC296D.. It's working ok. I am able to hear a lot of things but I'm only using it to concentrate on the talkgroups and channels that are not available on UHF or VHF. I still use my regular scanner to monitor APD, and AFD and EMS calls, but when they switch over to some of these other channels, like Medcomm Central or L&W then I can hear them there too. I must say that they are all much more comfortable and free to speak more openly having their own talkgroups. For instance, the motor units joke around a lot on the radios more. Today, I even heard homicide people talking about going to a death call and what they might find.

Some divisions just talk more than others. AISD police talk a ton. They will be on dispatch and then go to their North Channel and talk all the time. So does Animal Control. I think they are really enjoying the radios. Precinct 3 Constables talk a ton too. I just can't wait till the garbage crews come on the new system. That should be interesting.

Communications are distorted at times but other times they work fine. It's hit or miss and you never know if it's going to be good or bad. Hopefully the 2nd version of the radio will improve the voice quality even more. Other people in other areas are having trouble receiving talkgroups that are greater than 4 digits. I haven't run into that problem but I haven't run across any yet that are 5 or more digit talkgroups.

_____-
From Dec 15th:

I put the radio in FM instead of NFM like was posted on www.stongsignals.net <http://www.stongsignals.com/> , and it seems to work better. I used the sound settings that are posted on www.trunkedradio.net <http://www.trunkedradio.net/> and they seem ok, although there are many

times when I get clear transmissions and other times when it's totally distorted. A lot of it does have to do with reception. I don't mind corresponding with anyone else who has this radio to compare talkgroups that I am working to identify.

I still have tons of questions about this radio. The display jumps around so much that it's hard to tell whether I'm searching talkgroups or scanning talkgroups. You can hold down the trunk button and it will switch between scan talkgroups and searching talkgroups, so that helps. Some radios seem to work well, like Pflugerville PD, I hear very well, even downtown, but EMS radios don't come in that well at all. The software pretty much sucks. I was able to put in the frequencies and talkgroups but then when I go to bank 2 tab, I was not able to get the 100 talkgroups that I wanted identified for the first bank (tower) into the 2nd bank. I later was able to EDIT the .ssd program that I saved and pasted and copied it to the next bank. The File has to be edited with Notepad and not WordPad.

The software that comes with the radio, is fairly limited and you'll need to download the Japanese graphics to see it?? I don't know why? The help file does not have hardly any instructions at all. The program has a pull down that says "Copy Trunk Ids Data" but then there is no pull down or icon to paste that data. It seems really stupid how they did it. But I am able to put frequencies in the program and talkgroups and I am able to program the scanner. I also had it monitor while I watched it on the computer but that seemed pretty worthless that you have to type in alpha stuff using the mouse and clicking on the keypad. I saw something on www.strongsignals.net <http://www.strongsignals.net/> about a program that saves the data but I already have the data saved with this program that came with it so I'm not sure why I would need that program.

Overall I'm pleased but I do not think it will replace all my other scanners. Reception is hit and miss and there are times when it is so distorted that I can't hear them at all or other times where transmissions will just disappear

Check www.trunkedradio.net for updates on new talkgroups and to see who all is using the new system.

2065. Re: [CenTexComm] Can someone ID this hardware (pic)?

Yahoo group: CenTexComm
Date: 2003-12-28 21:02:31 UTC
From: Robert
Topic: 2060 Message: 2065

My guess on the solar panel thingy is that it's a GPS antenna. used to track the vehicles. it receives the satellites and transmits the GPS position by way of MDT or radio or whatever.

Austin is / was supposed to incorporate that into their new system too but I think that part either hasn't come in yet or they may have to scrap that and fix the radios first. I'm just waiting for Motorola to come back and say .. well for more money $$$ we can make the radios work better and install more towers. and fix any (Nextel?) interference.. .. At least that's what they have done in every other city.

Perhaps it is a solar-powered battery desulfator?

2067. No Brack Labor and Delivery base radio; APD does not have EMS dispatch; Trav Co Parks looking for a common talkgroup with EMS

Yahoo group: CenTexComm
Date: 2003-12-30 16:21:19 UTC
From: Robert
Topic: 2067 Message: 2067

The other night I heard Medic 18 on the Brack "labor and Delivery" talkgroup calling for them. Has there been any memo or notification to the EMS crews that they do not have a radio? Also has there been any communication to the other agencies such as APD that only 1 of the Medcoms is being used and/or monitored. I have talked to 2 police officers who asked me why EMS is not dispatching or available on those (Medcom) channels and I had to explain the whole process. They said I knew more than what they were taught before they got their radios.

Also Dennis (with Travis County parks) has there been any attempt to try to get the Travis County Parks and Travis County EMS a common channel to talk on? I know for a fact that any of the Interop's would work fine as well as the reds or the blues.

2071. Hopefully Simulcasting will not end.. Some frequencies will stay 155.715 153.950 462.975 are a few of them.

Yahoo group: CenTexComm
Date: 2003-12-31 02:42:05 UTC
From: Robert
Topic: 2071 Message: 2071

My understanding is that all the VHF fire depts. will remain on the VHF. Such as Lago Vista, Pflugerville fire, Manchaca, etc. They will always have FIRENET 153.950 which will link to the 800 Mhz talkgroup.

Also the County EMS volunteers will always have TCEMS 155.715 which also links to an 800 Mhz talkgroup. This allows AFD and EMS or anyone with this talkgroup to link to volunteers on these VHF frequencies.

I'm hoping there will also be one for INTERCITY 154.950 and 155.370 but I have not heard it active yet. Well I did hear STARflight calling Bastrop Co on Talkgroup 3824 but i'm not sure if it's it or not.

It has been posted that EMS will need to continue paging on 462.975 because they really do not want to part with their voice pagers on that frequency. AFD will continue paging station speakers on 453.275 since they too have something that works, so why change it.

As for the other frequencies: the 460's from APD, and the 453's for other city services.. I have no idea. Hopefully they will leave the patches up for awhile. right now there are a lot of RECEPTION and SOUND QUALITY issues that are starting to surface regarding the new system so I wouldn't suggest they get rid of anything right now. It's not to late to turn off the digital and make this whole think Analog and I think that will help out a lot. The digital just is not perfect, just like your digital phone that occasionally drops a call or goes out when you go down a hill, or gets distorted in fringe areas.

2074. Clarification

Yahoo group: CenTexComm
Date: 2003-12-31 21:23:51 UTC
From: D
Topic: 2074 Message: 2074

Just wanted to clarify what was mentioned earlier. I work for Travis County Parks and I am also an EMT, as are several other park staff. We are also a part of the ATCEMS system. We converted to the new radio system back in Sept. Unfortunately, the new radios did not have the talkgroup equivilant of EMS county programmed in and still do not. I have just been trying to shake the trees to get someone to program the darn things for staff who are EMT FRs. No sucess so far. Yes, we could use the tac or medcom talkgroups, but no one is instructed in that at all. There are still some of the VHF base stations out there that we monitor, but once you leave the base your all alone. Technically in the short term, we should probably be requesting EMS Com to patch us to a blue tac TG from county for a particular response. Like APD, no one is telling anyone anything though. It's the being in the dark part that bothers me.

Dennis B.

2077. Lasts night's big hour+ pursit with the crack pipe smoking guy in the van, suicidal 10-32 HIV+

Yahoo group: CenTexComm
Date: 2004-01-04 22:58:49 UTC
From: Robert
Topic: 2077 Message: 2077

The pursuit last night lasted (well actually it was early Sunday morning) 1/04/2004 from 1:30am to 2:44am. Supposedly the man was a suspect in a disturbance and was suicidal, 10-32 (with a gun), HIV+, and driving a White panel van smoking a crack pipe. This is what happened and a few of my own thoughts:

K9-91, Who is a K-9 (dog) Sergeant initiated the pursuit. Normally when a pursuit happens, a Sergeant is assigned as a "control supervisor" and they will tell the units to terminate the pursuit as APD as a "no pursuit policy", for what that's worth. NOTE: there are pros and cons of doing the pursuit This time however the shoe was on the other foot, so to speak, because it was a Sergeant that initiated the pursuit. So.... do you think he was going to call it off, heck no. So the chase was on and what a chase it was. This guy, should have gotten a driving award because, although he was running from the cops, speeding and running stop signs, he never hit anyone or ran anyone off the road and managed to avoid every spike strip (at least 5 or 6) that were thrown in front of him.

He was basically everywhere from downtown at 6th and Lamar up to 183 to Oak Knoll, back out 290 towards Manor (he went through the intersection of Cameron and 290 at least 5 times so that would have been the best staging point to set up spikes, or for DPS to shoot his tires. He was up and down I-35, preferring the lower deck, and up and down Lamar and down Ed Bluestein. At one point DPS was made aware of it and I had hoped they were going to take over because they do not put up with this type of pursuit and they would have rammed him off the road or shot out his tires in true DPS fashion. Hey that's why they are so famous, you can't run from DPS. See the movie: SUGARLAND EXPRESS.

But DPS was about to get involved and then LT33 (APD Lieutenant) came up on the radio and I have never heard so much emotion... to say that he was mad was an understatement .. he was literally screaming into the radio and said "I want every one to stop this pursuit NOW, I want all sirens and lights turned off now", so they told DPS that they were terminating the pursuit and DPS dispatch pretty much hung up the phone with APD (yes they still have to communicate by phone, no cross patching of radios and no rebroadcast over intercity - don't even get me started on that topic..) which was a mistake. Even though APD was officially not on the pursuit anymore, they were unofficially still chasing him. And STARflight knew better not to go home and they stayed in the air and kept on him.

By the time It got closer to me then I wanted it to, I saw a TCSO unit debating on whether he wanted to join in but he ended up watching the van go by and did fall in behind him trying to catch up but he didn't. He had an excellent opportunity to partially block the road with his vehicle but he did not. I basically just watched STARflight in the air with their spotlight shining down on the van. Too bad that DPS had dropped out at that point and they were not even told that STARflight was overhead or they would have ended it.

The APD officers got so frustrated that this was going on so long (A Saturday night for over an hour on Baker Radio.. I can only image how many other calls were being held while this fiasco went on). I went by the 7-11 Store at Lamar and 45ths and saw about 7 APD officers all having snacks on the hood of a patrol car watching STARflight as it

cross-crossed though the Shoal Creek neighborhood.. The van went that way and then this way and then here and then there.. many patrol vehicles were just off on the side of roads just watching him go by..helpless and unable to do anything. because officially they were not part of the pursuit or they were trying to fold up their spikes from when he went by the first time.. or just watching the show like I was.

Even though the Lieutenant had demanded that the pursuit be stopped, he backed off and said ok .well we can follow him, just don't chase.. so officially pretty much all of Edward, Charlie, Adam, Baker and George sectors were in on the game. No other calls were being dispatched, since everyone was assigned to the pursuit. It's kind of a catch -22 because there are only supposed to be 2 units following.. but what about everyone else that is ordered to: "set up spikes at that intersection", set up spikes at _____ and _____... they needed spikes at every major intersection but this guy never caught so much as a single spike.

Some highlights included when an Adam sergeant said, "I know there is already a control supervisor but why are we following him", clearly not wanting her troops to even get involved in it.
and DPS on 155.46 talking car to car saying: "should we have taken over this pursuit.. what if he goes and kills somebody and they blame us not getting involved and stopping him."

Finally around Shoal Creek and Denison, the van just came to a stop behind an apartment complex and so all 5 sectors starting moving that way like snakes in on their prey. I don't exactly know the details but they were screaming "hold the air" and then said "we need EMS for a dog bite" so I assume the K9 doggie had enough and decided to go up and take a bite out of the guy. Gosh, I hope the doggie will be ok if the guy is really HIV+, but who knows if that was just an urban legend or what and also if he was indeed armed.

Anyway, so pretty exciting listening for over an hour. I think that APD needs to decide if they are going to have pursuits or not and everyone should follow the same rules. I sensed a lot of frustration by other officers that the only reason this was going on was because it was a sergeant doing the chasing. Had it been any regular officer, he would have been told to stop. Also if the thing is going on for almost an hour and spike strips are not working, then they need to go to a plan B. That would be: A) either shoot out tires, B) set up an old fashioned road block, C) Call another agency (DPS) that will take over and end the deal once and for all, or D) just stop the whole thing all together. Actually STARflight was called and was unable to get on the radio for the first 30 minutes due to the excited K9 Sergeant hogging the radio. The whole reason (I thought) to use the helicopter was to have the units back completely off and let the air unit track him until he comes to a stop and then nab him or trap him or be able to do a "felony stop" whereby they force him off the road. So they could have utilized STARflight that way but really they were still chasing him. Who pay for that jet fuel?

And finally : WHERE THE HELL WAS AIR 1 ? , APD's, $ MILLION DOLLAR $ helicopter. I last saw them on New years eve, DURING THE DAYTIME flying around in circles over the north sub like they always do..but come New Years Eve and since then, I have not seen them since. They always fly at the most uneventful times. What good is a police helicopter that is only available Mon-Friday from 8-5. That's ridiculous. Thank God for STARflight., Air 1 can only fly in circles anyway.. they couldn't track a paper bag blowing across a field, but they do real good clocking speeders during the day.

Comments, additions, did I leave anything out.. ???

Myles,

All is correct and what I have except.

> Probably 151.4 Hz PL tone
I have it as 162.2 Hz. 5B.

I just need to go out there and really see if my radio is or is not working right with the frequencies and TLP/PL/Tone squelch I have. Last time I think I could TX just fine on SO but couldn't RX anything. It is an HT1000, FWIW.

Thanks.,
sean

Topic: 2076 Message: 2080

I think, thanks to Robert, the mystery is solved.

Blanco SO is: 154.755 I had 154.775 programmed in the radio. I overlooked this 50000 times.

Now I just need to make sure the other frequencies are correct. Could you help me out for that?

Channel Six: N. Hays FD Pager
RX: 154.2500
TX: 159.04500

Channel Seven: N. Hays Fire (talk)
RX: 154.2500
TX: 159.04500

Channel Eight: N. Hays EMS
RX: 154.99500
TX: 158.8800

Channel Nine: Hays SO
RX: 155.86500
TX: 154.8000

Channel Ten: Travis SO (west)
RX: 155.3100
TX: 156.0900

Channel Eleven Firenet
RX: 155.91500
TX: 153.99500

Channel Twelve: Mutual Aid
RX: 154.2800
TX: 154.2800

Channel Thirteen: I/C Base
RX: 155.3700
TX: 154.9500

Channel Fourteen: Fred EMS
RX: 154.44500
TX: 153.8900

Channel Fifteen: Burnet SO (N)
RX: 154.78500
TX: 153.84500

Channel Sixteen: Austin Weather
RX: 162.4000

Some of these I know are correct...Like WX, FireNet, Travis SO (w),
Hays SO but if any of the other ones are incorrect, please let me know.

From: Rev. Sean Farrell
Topic: 2076 Message: 2082

Aaron,

Thanks a lot! Everything else I have is correct. Now I just have to decide if I want to keep all those channels in or take one out to put in AFD Firenet. Most likely I'll exchange Fred. EMS for AFD FireNet.

What is the name of that radio shop on Saint Elmo and South Congress here in Austin? I originally had it programmed there and will probably go back over there. Do you know much they charge an hour? I just two or three changes.

Thanks again!

Sean

2090. Citywide MLK March & Rally on Monday hopefully will be peaceful in the park

Yahoo group: CenTexComm
Date: 2004-01-15 16:26:19 UTC
From: Robert Barker
Topic: 2090 Message: 2090

Monday evening (depending on the weather) should provide some interesting listening. Not sure if Parks will be on their own system or what. The parties in the park next to the Millennium Youth Complex usually get quite large and parks police has trouble getting them out of the park. Hopefully this year will be more peaceful than in the past. But if not, there will be interesting scanner traffic.

☐ March Route Map <http://www.mlkcelebration.com/2004march_route.pdf>
http://www.mlkcelebration.com/
Monday, January 19, 2004
From Capitol to Huston-Tillotson
South Steps of Capitol
9am
Cultural Festival
Huston-Tillotson College
Immediately Following March until 3 p.m.

In celebrating the national MLK holiday, the Heritage Council is sponsoring the 11th Annual 2004 Citywide MLK March & Rally. The purpose of the Community March is to celebrate Dr. King☐s legacy while uplifting diversity and multi-culturalism in our city.

The 2004 celebration will kick off at 9 a.m. with a brief rally at the State Capitol followed by our annual March (1.5 miles) to the historic Huston-Tillotson College, where exciting activities are planned. The Heritage Council is planning a Community Festival which will begin after the March and last until 3 p.m.; it will include all types of vendors, gospel choirs, local musical artists, marching bands and local dance troupes to make the 2004 Celebration the best ever! A vendor application can be downloaded below for those interested in purchasing booth space. This must be submitted by January 2, 2004. For questions and information, please contact Michael & Elizabeth Hanshaw Winn by email or by telephone at (512) 671-3607.

Last year☐s march drew an estimated 15,000 people and we are anticipating even more individuals to unite for this special occasion in January 2004. All businesses, non-profit organizations and individuals are invited to march with us and celebrate Dr. King☐s legacy.

2096. I found this posted on the Austin Police Association website: Can They Hear Me Now?

Yahoo group: CenTexComm
Date: 2004-01-28 16:42:44 UTC
From: Robert Barker
Topic: 2096 Message: 2096

I found this posted on the Austin Police Association website
http://www.austinpolice.com/headlines.htm#radio
<http://www.austinpolice.com/headlines.htm#radio>
Can They Hear Me Now?
By Mark Thompson
Since our implementation of the new 800 MHz Trunked Radio system many officers have apparently been wondering, because they are asking me, if the public or scanner user can still hear our radio communications.
Our new radios are configured to transmit only digital information. Your voice goes into the microphone in analog form and the radio converts it into a digital (0s and 1s) signal. That digital signal is then transmitted over the air on our new 800 MHz frequencies. When your radio receives a digital voice signal it converts it back to an analog form you can understand and sends it to the speaker.
When you transmit, your signal is sent over one of many frequencies available in the system. These frequencies are "pooled" and shared by all of the system users. This concept is called Trunking. Each time you key up you may be on a completely different frequency than your previous transmission. There is a control frequency that your radio monitors in the background. This control channel information is what "tells" your radio which frequency to switch to for the next conversation. All of the radio users in your Sector have normally selected or tuned to one "talk group" or channel, i.e. Baker. The control channel moves all members of that talk group simultaneously to the next selected frequency and that's how you can hear and follow each other conversation.

Yea that's all great but can they hear me?
Right now the answer is yes. Only because during this transitional period the Department has been simulcasting all of the Sector "new radio" traffic over the old PD UHF frequencies. Without this simulcasting the answer, up to now, would be no.
Current scanners on the market are not capable of completely demodulating the digital signal that is transmitted or of following the control channel assignments. Our particular system is newer than most in the country and up to now scanner manufacturers have not had a product on the market that will track this new system. That is changing.
In December of this year Uniden (the Bearcat guys) and Radio Shack are both releasing APCO P-25 digital capable scanners claiming to be able to track our new system. Uniden has the BC796D base/mobile and BC296D handheld. Radio Shack has the Pro-96. I have had the opportunity to demo the Uniden BC796D and the BC296D scanners over the past couple of weeks. They do successfully track and listen to our new radio system. I don't think that the sound is nearly as clean as the old analog scanners we are used to, but then even our handie talkies sound different than they used to. I have not been able to

test the Radio Shack Pro-96 but have talked to individuals who have had the opportunity to compare both side by side. Comments were that the Pro-96 does not perform as well.
I haven't seen much advertising or pricing of these new scanners. I was able find on the Internet a mail order dealer who is taking advance orders for the Uniden scanners in anticipation of their release. He is asking $529.00 plus shipping. I have applied for and become the Uniden dealer in the Austin area. I should have access to the new Uniden BC796D and BC296D as soon as they are released for sale. Again hoping for December. If you are interested please feel free to contact me. My email address is mtaustin@...

2098. BC296 vs Pro96

Yahoo group: CenTexComm
Date: 2004-01-30 18:11:03 UTC
From: Robert Barker
Topic: 2098 Message: 2098

The "fix" for the Pro-96 was released yesterday as a downloadable update on the radio. Supposedly this fix will allow it to receive the CQPSK that Austin uses on its Simulcast 1 and Simulcast 2 sites.

Incidentally, there seems to be confusion regarding these sites. There are multiple towers that transmit the Simulcast 1 frequencies and multiple towers that transmit the Simulcast 2 frequencies. It is not just 1 or 2 towers. There are also some IR - Intellirepeater sites that are out in the fringe areas that help reception when their radios are out in these areas. These IR sites may only have a transmission of one sentence and cannot be relied on for receiving but they are at the slower baud rate and you will have no problem receiving these towers. Of the IR sites, the DAVIS IR is not being used at all and I do not know why.

I had the Pro-96 for awhile and realized it did not work on the Simulcast (faster CQPSK) sites so I did not keep the radio. I am anxious to see or hear how it will perform after the upgrade. So if anyone has one of these, call me and I'll bring the BC296D and we can put them side by side and see which one works better.

I guess it's mainly user preference. The BC296D uses a battery pack but it has 1000 channels I think this radio also allows for a ton of more lockouts and you can have 100 talkgroups per bank.

The Pro 96 uses regular batteries but only has 500 channels and I believe that your lockouts and talkgroups have to equal 100 which doesn't seem like near enough to me. Basically with this radio, you will not be able to search much and will be forced to only scan known talkgroups.

With regard to the talkgroups that are being listed on www.trunkedradio.net The CIB is Criminal Intelligence Bureau and the OCD is Organized Crime Division. The CIB talkgroups contain a lot of surveillances and so do the SR (Street response) talkgroups.

For those that have the BC296D, please post any suggestions or updates you have that will help this radio specifically receive the Austin system. I have my radio set to FM instead of the default NFM. I am using the Radio Shack antenna that has the orange "800 Mhz" on the side of it. And my sound settings right now are set at 533, but I have been changing it anywhere between 433 to 933. The auto tuning feature has picked both the high and low setting depending on my signal quality.

You have to have a Pro-96 programming cable to make the firmware upgradeand I understand they are hard to come by if you do not have one.The PRO-96 programming cable is not hard to come by. They are available at your local RadioShack store. They cost $19.99. The part number is 20-289 (NOT 20-048). Most of the stores in my area have a couple in stock and have no trouble with replenisment of that item.

If you have both a Uniden and a GRE Scanner, switching back and forth isa mental nightmare as the way they do things is very different. I just gotrid of a Pro 92, but I kept the cable .I use both Unidens and GRE built scanners. Both have unique characteristics and both have advantages and disadvantages when compared to each other.

I hate the fact you could not easily zero into one talk group on the GRE. It can be easier to zero in on one talkgroup with a Uniden. It is a more complicated task when you are scanning multiple trunked and/or conventional systems simultaneously.

I hate the fact neither the Pro 92 or the Pro 96 will copy I-Call.Although Uniden models have an "I-call" feature, it does not properly track both sides of an I-Call conversation. You need to use a program like Trunker or Etrunker in order to appreciate the I-Call tracking feature.

I hate the fact the GREs have no control channel only mode like theUnidens. This is an extremely strong plus for Uniden over the GRE.GRE radios do have control channel only mode. All GRE and Uniden radios that use the Control Channel only mode are part of the same generation or later. Control Channel only mode became a feature on both types of scanners after the experation of a certain patent held by Motorola.

I hate the limited, harder to read at night text display of the GRE.Newer generations of GRE scanner have improved the display lighting.

I like the ability to link search banks on the GRE.Actually, I like all the search features of the Unidens better than I do the GRE radios. I don't know what ability you are describing on the GRE radios.

I like the weather alert priority with text message while scanning on the GRE.OK. I have a stand-alone weather radio with SAME, so I've never explored that feature in depth.
I like the instant decode of sub audible tones.Yes, me too! I hate the slow CTCSS/DCS scan that Uniden uses. It is almost useless. Other PL features have been improved on the PRO-96 as well.

Like you, I can see a variety of interesting uses for virtual memory banksin the GRE. One of these I visualize as a work around for not being able tocontrol the GRE like the Uniden. Since I like to limit my scanning tocertain parts of a TRS at times, I see programming the same TRS intosequential banks and limiting the talk groups scanned in those banks saytoone for fire another for tactical operations. Then you can add or deletescan banks to control your monitoring of your favorite TRS. This would be awaste of resources on any previous GRE model but would be quite doable onthe PRO-96.Virtual folders is a great idea. I've used the feature to enhance my scanning activity while on a trip. At home, I just use Win-96 to make

the changes I desire.

I probably will never buy another Uniden handheld because of their stupiduse of a proprietary NiCad battery pack.I like having a choice to use NiCad or Alkaline AA batteries. If your Uniden battery dies, then you are SOL til it gets charged up again.

I hesitate to buy another GRE handheld because of their crappy design forholding batteries in place that weakens over time and leads tointermittentpower failures as connections to the batteries is lost. When power is restored, it does not resume scanning but holds until you press a key. DUMBI've never had a problem with GRE battery contacts, but I'll take your word for it. Newer GRE scanners do resume scanning on start up. It's proof that GRE development teams try to incorporate the features that users desire in future models. And in the case of the PRO-96 (and to a limited degree, the PRO-92) GRE has produced upgrades that can be installed in current models.

2103. My take on the radio interference Issue as it relates to Austin

Yahoo group: CenTexComm
Date: 2004-02-01 15:45:34 UTC
From: Robert
Topic: 2103 Message: 2103

The America's Most Wanted show wants everyone to join in the fight of 800 Mhz radio interference at www.amw.com

They basically want NEXTEL to move their system up to a higher band. I have to say that the cellular companies and NEXTEL were there first. At least is the case with the City of Austin system. They were just fine and did not have these problems using UHF analog on the 460 and 453 Mhz bands and it would have been possible to operate a Trunked radio system on those bands without having to go to 800 Mhz. Also the whole issue of being digital is causing a whole host of problems, most noticeably the distortion of the voices. They could alleviate a lot of the problem right now but switching it back to Analog. If they insisted on being 800 and trunked they could have just used the Water/Wastewater system that was already in place and working fine.. it was from 856-860.2125 and .4375 and they could have added more frequencies to that system. It was much further away from these other systems. and again, analog which would have been a much better choice. These interference issues are all over the internet and are being experienced in every city that has switched to 800 Mhz digital. This is not a new issue but sadly, we see it almost everywhere. San Antonio got their Motorola system and soon discovered tons of dead spots. Motorola came back and said.. well if you will spend more money, we will patch it with remote sites and try to make it work better. I'm sure Motorola will offer the same thing here. Spend more money and we'll try to fix the problems.
San Antonio got so fed up that they are changing over to a whole new system. Dallas Fire, tried 800 Mhz and gave it back and said no way. I have heard that Austin Fire Dept is refusing to go to the new system citing some of these same issues: Dead spots and voice clarity. I don't know how long they will be able to hold out but I salute them on standing firm while all the other agencies stood buy and let the change happen. Water/Wastewater, TCSO and Austin EMS were the first 3 agencies that were supposed to test the system and give it a thumbs up if it was working ok but we knew all along that EMS wasn't even using the radios at all when they were supposed to be giving feedback. Now they are left with a system that will have to be fixed and it's too late to get their money back. You can't blame the guys driving the ambulances as I don't think they were even told that they were supposed to use it and give feedback. There has been a huge lack of communication (ironically) with the new system. There are blanks of talkgroups that are available for intersystem coordination like Law 1-5, Interop A-H, Blue 9-16 and Red 4-8 but no one I have talked to knows what any of these are supposed to be used for and they are all scared to use them because they think it's using someone else's channels. Most officers do not even know how to change the channels on their radio and are scared to go over to another channel for that very reason. I overheard some County Park units yesterday saying they had to take their radios in to be reprogrammed to so they could change the talkgroups that they are able to scan which made it better for them. Also Everyone, APD, EMS, UTPD, TCSO and Parks police has event channels but no one has each other's event channel. That may need to change or else they need to designate some common event channels like the Interops.

I just hope it is better for them than my BC296 receives them. Sometimes I get it clear but other times it is really distorted. Does anyone have the Pro-96 with the recent software modification done and can report on how well it is working. I would very much like to hear

one either in person or over the phone.

Problem is, NexTel is generally *noisy* on-band. Pound for pound, they're the "found cause" of more interference than most. You've got to remember, though, that NexTel is NOT cellular. They're trunked radio to a phone. Hence, more chance for interference, as they're transmitting on a wider, more-active set of their assigned spectrum.

Not true. Not enough frequencies available. What needed to have been done was a wider allocation of public-safety only bandwidth, and move commercial radio elsewhere in the spectrum.

Was *BAD* last night. Several TCSO-Baker units mentioned it, as did Baker dispatch.

> again, analog which would have been a much better choice.

Agreed, especially with the topology of the area. The only upside to digital that seems worth it is the one Austin isn't going to use any time soon - encryption.

Yep. Wide range of signal issues in Dallas. NOT pretty... but they tested it WELL and planned ahead for interop. The Austin interop story is "you want to interop, buy new radios." For smaller agencies, this is a large financial hit. Oh, yeah, they have to pay royalties, too... I forgot about that.

Or, worse yet, get told specifically NOT to use them as they've never been able to in the past and haven't put the forethought into integration issues, so they're staying away.

Wise saying: "People will resist change until the pain of staying the same outweighs the pain of changing."

Mike :)

2106. if Austin had done UHF trunking would there be enough frequencies?

Yahoo group: CenTexComm

Topic: 2106 Message: 2106

The City and County could have run a trunked system on their existing UHF channels which outnumber the frequencies used on Simulcast sites. The advantage to these, is that they would not have had to have towers all over the city.

460.025, 460.05, 460.100, 460.150, 460.175, 460.200, 460.275, 460.325, 460.375, 460.400, 460.450, 460.475, 460.500, 460.875 453.100, 453.275, 453.150, 453.450, 453.500, 453.675, 453.775, 453.900,
453.200, 453.225, 453.325, 453.525, 453.55, 453.575, 453.600, 453.625, 453.700, 453.725, 453.800,
453.85, 453.875, 453.925, 453.975. These do not even include all the UHF split frequencies and the ones that were licensed to EMS such as 462.975 462.950 463.000 463.025 463.050 463.075 463.100 463.125 463.150 463.175

Mike,

I believe the INTEROPS are for as hoc patches when needed. As far as BLUE09-16, they are supposed to be used just as BLUE01-08 are, just more channels for certain tactical reasons (MedOps, Fireground, etc.). I think more people will get lost in the radio channels, and that is what I'm afraid of happening to someone who has an issue, but that is what the little orange button is for, anyway <g>.

Mike
